Preface to the First Edition	xv
Preface to Second Edition	xvii
About the Author	xix

Part I

The Unique Features of Fungi

Chapter 1

The Hyphal Mode of Life	3
1.1 Features of Hyphae	3
1.1.1 Apical Extension	3
1.1.2 Spread and Longevity	4
1.1.3 Large Surface Area	6
1.2 Hyphal Structure	8
1.2.1 Cell Wall	8
1.2.2 Glucan	9
1.2.3 Hydrophobin	11
1.3 Internal Structure	12
1.3.1 Microtubules and Actin Filaments	12
1.3.2 Spitzenkörper and Polarisome	16
1.3.3 Calcium	17
1.3.4 Vacuole	18
1.3.5 Septa and Woronin Body	18
1.4 Networking	18
1.4.1 Branching	18
1.4.2 Hyphal Fusion	19
1.5 Main Functions	20
1.5.1 Nutrient Uptake	20
1.5.2 Protein Secretion	20
1.6 Morphogenesis	21
1.6.1 Hyphal Differentiation	22
1.6.2 Rhizomorph	23
1.6.3 Mushroom Fruiting Body	23
1.7 Autophagy	24
1.8 Concluding Remarks	24
References	24

Chapter 2

The Multinuclear Condition	29
2.1 Nuclear Number and Hyphal Growth Rate	29
2.2 Chromosome Numbers	29
2.2.1 Classical Methods	29
2.2.2 New Methods	30
2.3 Multiple Genomes in Individual Nuclei	32
2.4 Nuclear Division Cycle	33
2.4.1 Temperature-Sensitive Mutants	34
2.4.2 Stages in Nuclear Division Cycle	34

2.5	Asynchronous Nuclear Divisions.....	35
2.6	Nuclear Migration.....	36
2.7	Nuclear Positioning and Gene Regulation.....	36
2.8	Heterokaryosis.....	38
2.8.1	Sheltering of Lethal Mutation.....	39
2.8.2	Change in Nuclear Ratio.....	40
2.8.3	Nuclear Competence.....	42
2.9	Parasexual Recombination.....	43
2.10	Are All Nuclei Active Simultaneously?.....	43
2.11	Concluding Remarks.....	44
	References.....	44

Chapter 3

	Spores: Their Dormancy, Germination, and Uses.....	47
3.1	Models for Cellular Processes.....	47
3.2	Pleomorphism.....	48
3.3	Dissemination.....	50
3.4	Longevity.....	50
3.5	Structure.....	50
3.5.1	Topography.....	50
3.5.2	Wall Structure.....	52
3.6	Water Relations.....	53
3.7	Endogenous Substrates.....	53
3.7.1	Lipids.....	53
3.7.2	Polyols.....	54
3.7.3	Trehalose.....	55
3.8	Link between Sporulation and Secondary Metabolism.....	55
3.9	Self-Reconditioning of Substratum.....	55
3.10	Germination Triggers.....	56
3.10.1	Adhesion.....	56
3.10.2	Heat.....	57
3.10.3	Light.....	57
3.10.4	Chemicals.....	57
3.11	Material for Probing Fungal Physiology.....	58
3.11.1	Prerequisites for Development.....	58
3.11.2	Release of Self-Inhibitors and Efflux of Carbon Compounds.....	58
3.11.3	Cold Dormancy.....	59
3.11.4	Genome Activation.....	59
3.11.5	Dark Fixation of CO ₂	60
3.11.6	Respiratory Increase.....	60
3.11.7	Regeneration of Reducing Power.....	62
3.11.8	Synthetic Pathways.....	62
3.11.9	Sensing, Signaling, and Transcriptional Changes.....	63
3.12	Applications.....	64
3.12.1	Biocatalysis.....	64
3.12.2	Biocontrol.....	64
3.13	Concluding Remarks.....	65
	References.....	65

Part II

Fungi in Biosphere and Human Health

Chapter 4

Fungi as Scavengers	71
4.1 Decay of Wood and Litter	71
4.2 Clues from Microscopy	72
4.3 White- and Brown-Rot Fungi	73
4.4 Litter Decomposers	74
4.5 Degradation of Cell Wall Polymers	75
4.5.1 Lignin	75
4.5.2 Cellulose	84
4.5.3 Hemicellulose	86
4.6 Reactive Oxygen Species	86
4.7 Unsolved Problems	87
4.8 Clues from Genome Sequence	87
4.9 Physiological Processes	88
4.10 Concluding Remarks	88
References	89

Chapter 5

Fungi as Symbiotic Partners	91
5.1 Mycorrhiza	91
5.1.1 Types of Mycorrhiza	91
5.1.2 Identification	93
5.1.3 Development	93
5.1.4 Carbohydrate Transfer	94
5.1.5 Phosphorus Transfer	95
5.1.6 Nitrogen Transfer	95
5.1.7 Decomposition of Plant Residues	96
5.1.8 Mycorrhiza as Conduits of Photosynthetically Fixed Carbon Compounds	96
5.1.9 Cheating in Plant-Fungus Marriages	99
5.1.10 Genome Sequence	100
5.2 Endophytic Fungi	100
5.3 Lichens	101
5.3.1 Mycobiont and Photobiont	102
5.3.2 <i>In Situ</i> Study	102
5.3.3 Synthesis	102
5.3.4 Movement of Carbohydrate	103
5.4 Concluding Remarks	103
References	103

Chapter 6

Fungi as Plant Pathogens	107
6.1 The Rust Fungi	107
6.1.1 Thigmotropism and Thigmomorphogenesis	108
6.1.2 Haustorium	110

6.2	Host Resistance and Pathogen Avirulence.....	112
6.3	Dual Role for Haustorium.....	115
6.4	Effector Molecules.....	115
6.5	Concluding Remarks.....	117
	References.....	118

Chapter 7

	Fungi as Chemical Factories.....	121
7.1	Fungal Factories.....	121
7.1.1	Penicillin.....	121
7.1.2	Cephalosporin.....	126
7.1.3	Statins.....	126
7.1.4	Anticancer Drugs.....	127
7.1.5	Defensins.....	127
7.2	Attractions.....	128
7.3	Yield Improvement.....	130
7.4	Heterologous Protein Production.....	131
7.4.1	Chymosin.....	131
7.4.2	Lipases.....	131
7.4.3	Lactoferrin.....	132
7.4.4	Human Vaccine.....	132
7.5	Methylotrophic Yeasts.....	132
7.6	New Methods of Yield Improvement.....	133
7.6.1	Increase in Gene Copy Number.....	133
7.6.2	Manipulation of Morphology.....	133
7.6.3	Hyperbranching Mutants.....	134
7.6.4	Modification of Cell Wall.....	135
7.6.5	Other Molecular Manipulations.....	135
7.6.6	New Expression Hosts.....	135
7.7	Biofuel Ethanol.....	136
7.8	Agrochemicals.....	138
7.9	Concluding Remarks.....	138
	References.....	139

Part III

Gene Silencing

Chapter 8

	Transformation and Discovery of Gene-Silencing Phenomena.....	145
8.1	Transformation Procedure.....	145
8.2	Homologous vs. Ectopic Integration of Transgene.....	146
8.3	Purification of Transformant.....	146
8.4	Gene-Silencing Phenomena.....	147
8.4.1	Silencing by Mutation.....	147
8.4.2	Meiotic Silencing by Unpaired DNA (MSUD).....	149
8.4.3	Silencing by DNA Methylation (MIP).....	152
8.4.4	Quelling.....	152
8.5	RNA Silencing.....	155

8.6	Concluding Remarks.....	156
	References.....	157

Part IV

Model Organisms

Chapter 9

Yeast: A Unicellular Paradigm for Complex Biological Processes.....	161
---	-----

Amitabha Chaudhuri

9.1	Molecular Mechanisms of DNA Replication and Cell Division.....	162
9.2	Bud Growth and Polarity.....	165
9.3	Mating and Signal Transduction Cascade.....	168
9.4	Protein Targeting.....	172
9.5	Mitochondrial Biogenesis.....	172
9.6	Functional Genomics.....	176
9.6.1	Evolution of the Yeast Genome.....	176
9.6.2	Functional Analysis of the Yeast Genome.....	177
9.6.3	Expression Pattern of Genes Using DNA Microarray.....	179
9.6.4	Mapping Transcription Network.....	180
9.7	Proteomics and System Biology Modeling.....	181
9.8	Concluding Remarks.....	183
	References.....	184

Chapter 10

<i>Neurospora</i> : A Gateway to Biology.....	187
---	-----

10.1	Habitat and Life Cycle.....	187
10.2	Life History.....	191
10.3	One Gene—One Enzyme.....	192
10.4	Mutational Analysis of Conidia Development.....	193
10.5	Meiotic Events.....	195
10.6	Gene Maps.....	196
10.7	Chromosome Morphology and Gene Expression.....	201
10.8	Ascus Development Biology.....	201
10.9	Molecular Revolution.....	202
10.10	Genome Sequence.....	203
10.11	Concluding Remarks.....	204
	References.....	204

Chapter 11

<i>Aspergillus nidulans</i> : A Model for Study of Form and Asexual Reproduction.....	207
---	-----

11.1	Conidiophore Structure.....	207
11.2	Conidiation Genes.....	208
11.3	Conidiation Trigger.....	209
11.4	Developmental Competence.....	210
11.5	Regulatory Pathway.....	211
11.6	Master Regulatory Genes.....	211
11.7	Microcycle Conidiation.....	212

11.8 Concluding Remarks.....	212
References.....	214

Chapter 12

<i>Ustilago maydis</i> and Other Fungi as Models of Sexual Reproduction.....	217
12.1 Heterothallism vs. Homothallism	217
12.2 Cell-Cell Recognition.....	219
12.2.1 Mating Types	219
12.2.2 Assay for Mating Compatibility	222
12.3 Extracellular Recognition	222
12.3.1 The <i>a</i> Locus	222
12.3.2 Pheromone and Receptor	223
12.4 Intracellular Recognition	224
12.5 Genetic Engineering for Sex	225
12.6 Concluding Remarks.....	227
References.....	227

Part V

Adaptations

Chapter 13

Photoresponses and Circadian Rhythm.....	231
13.1 Photoresponse Phenomena.....	231
13.1.1 Pigmentation	231
13.1.2 Zonations	232
13.1.3 Reproduction.....	232
13.1.4 Periodicity of Spore Discharge	233
13.1.5 Phototropic Curvature.....	234
13.1.5.1 <i>Pilobolus</i> spp.	234
13.1.5.2 <i>Phycomyces blakesleeana</i>	236
13.2 Morphogenesis of Fruiting Bodies.....	238
13.2.1 Development of Fruit Bodies	238
13.2.2 Other Fungi.....	238
13.3 Circadian Rhythm in <i>Neurospora</i>	239
13.3.1 Clock Gene.....	240
13.3.2 Feedback Loops.....	241
13.4 Light-Responsive Genes.....	243
13.5 Entrainment.....	244
13.6 Possible Role of Circadian Rhythm in <i>Neurospora</i>	245
13.7 Concluding Remarks.....	245
References.....	245

Chapter 14

Thermophilic Fungi: Eukaryotic Life at High Temperature	249
14.1 Discovery	249
14.1.1 Guayule Rets.....	250
14.1.2 Composts.....	251

14.1.3	Soil	252
14.2	Physiology	254
14.2.1	Nutrition	254
14.2.2	Respiration	254
14.2.3	Utilization of Carbon Sources	255
14.2.4	Transport of Nutrients	256
14.2.5	Protein Turnover	256
14.3	Extracellular Enzymes	257
14.3.1	Protease	257
14.3.2	Lipase	257
14.3.3	Amylase	258
14.3.4	Cellulase	258
14.3.5	Xylanase	259
14.4	Intracellular Enzymes	259
14.4.1	Trehalase	259
14.4.2	Invertase	259
14.5	Thermotolerance Gene	261
14.6	Heat-Shock Proteins	261
14.7	Intracellular Solutes	262
14.8	Concluding Remarks	262
	References	263

Part VI

Populations

Chapter 15

	Species: Their Diversity and Populations	267
15.1	Number of Fungal Species	269
15.2	Value of Studying Population Structure and Diversity	269
15.2.1	Basic Research	270
15.2.2	Applied Research	271
15.3	Species Recognition	271
15.4	Discovery of Intraspecies Variability	272
15.4.1	Physiological Races	272
15.4.2	Vegetative Compatibility	273
15.5	Generation of Variation	273
15.5.1	Mutation and Heterokaryosis	273
15.5.2	Transposable Elements	273
15.6	Detection of Genetic Variation in Populations	274
15.6.1	Isozyme Electrophoresis	274
15.6.2	Restriction Fragment Length Polymorphism	275
15.6.3	Random Amplified Polymorphic DNA	276
15.6.4	Ribosomal DNA	277
15.6.5	Mitochondrial DNA and Mitochondrial Plasmids	277
15.6.6	Karyotype Polymorphism	278
15.6.7	Spore Killer Elements	278
15.6.8	Multilocus Strain Typing	278
15.6.9	Microcycle Conidiation	279

15.7 Speciation.....	279
15.8 Concluding Remarks.....	281
References.....	281
 Chapter 16	
Senescence.....	283
16.1 Discovery.....	283
16.2 Terminology of Senescence.....	284
16.3 Nucleus- or Mitochondria-Based Senescence.....	284
16.3.1 Genetic Cross.....	286
16.3.2 Heterokaryon Test.....	286
16.4 Senescence and Other Death Phenomena.....	287
16.5 Cytoplasmic Mutants.....	287
16.6 Preservation of Senescing Strains.....	287
16.7 Instability of Mitochondrial DNA.....	288
16.8 Senescence-Inducing Plasmids.....	291
16.8.1 Variant Plasmids.....	292
16.8.2 Spread of Plasmids.....	292
16.9 Nuclear Gene Mutants.....	293
16.9.1 Natural Death.....	293
16.9.2 Senescent.....	293
16.10 Link with Aerobic Respiration.....	296
16.11 Concluding Remarks.....	297
References.....	298
 A Glossary of Mycological and Interdisciplinary Terms.....	301
Appendix: Naming, Defining, and Broadly Classifying Fungi.....	319
General References.....	328
Index.....	329
