Introduction: The Optical Microscope in Cell Biology	xi
Contributors	xv
Acknowledgments	xvii
 Chapter 1 The Light Microscope	1
Lenses and Microscopes	1
The Back Focal Plane of a Lens	4
Good Resolution	8
Resolution: Rayleigh's Approach	9
Abbe	13
Add a Drop of Oil	16
Köhler Illumination	18
References	19
 Chapter 2 Optical Contrasting Techniques	21
Darkfield	21
Phase Contrast	23
Polarization	25
Differential Interference Contrast	28
Hoffman Modulation Contrast	31
Which Technique Is Best?	34
References	34
 Chapter 3 Fluorescence and Fluorescence Microscopy	35
What Is Fluorescence?	35
What Makes a Molecule Fluorescent?	39
The Fluorescence Microscope	40
Optical Arrangement	40
Light Source	40
Filter Sets: Excitation Filter, Dichroic Mirror, and Barrier Filter	43
References	47
 Chapter 4 Image Capture	49
Optical Layout for Image Capture	49
Color Recording	49
Additive Color Model	50
Subtractive Color Model	51

CCD Cameras.....	53
Frame-Transfer Array.....	55
Interline-Transfer Array	55
Back Illumination	56
Binning	56
Capturing Color.....	57
Filter Wheels	57
Filter Mosaics	58
Three CCD Elements with Dichroic Beamsplitters	58
Boosting the Signal	58
References	61
 Chapter 5 The Confocal Microscope	63
The Scanning Optical Microscope.....	63
The Confocal Principle	63
Resolution and Point Spread Function	65
Lateral Resolution in the Confocal Microscope.....	68
Practical Confocal Microscopes	69
The Light Source: Lasers	71
Gas Lasers.....	72
Solid-State Lasers	72
Semiconductor Lasers.....	73
Supercontinuum Lasers	74
Laser Delivery	75
The Primary Beamsplitter	76
Beam Scanning.....	77
Pinhole and Signal Channel Configurations.....	77
Detectors.....	81
References	82
Further Reading	82
 Chapter 6 The Digital Image	83
Pixels and Voxels.....	83
Contrast	83
Spatial Sampling: The Nyquist Criterion	85
Temporal Sampling: Signal-to-Noise Ratio	86
Multichannel Images	89
References	91
Further Reading	91
 Chapter 7 Aberrations and Their Consequences	93
Geometrical Aberrations	93
Spherical Aberration	93

Coma.....	99
Astigmatism.....	100
Field Curvature.....	100
Chromatic Aberration	102
Chromatic Difference of Magnification	103
Practical Consequences.....	105
Apparent Depth	107
References	108
Further Reading	108
Chapter 8 Nonlinear Microscopy.....	109
Multiphoton Microscopy	109
Principles of Two-Photon Fluorescence	109
Theory and Practice.....	111
Lasers for Nonlinear Microscopy	112
Advantages of Two-Photon Excitation	114
Construction of a Multiphoton Microscope	115
Fluorochromes for Multiphoton Microscopy	116
Second Harmonic Microscopy.....	117
Summary.....	122
References	122
Further Reading	123
Chapter 9 High-Speed Confocal Microscopy.....	125
Tandem Scanning (Spinning Disk) Microscopes.....	125
Petràn System	125
One-Sided Tandem Scanning Microscopes (OTSMS).....	128
Microlens Array: The Yokogawa System.....	128
Slit-Scanning Microscopes.....	130
Multipoint-Array Scanners.....	132
Structured Illumination.....	135
References	135
Further Reading	136
Chapter 10 Deconvolution and Image Processing	137
Deconvolution	137
Deconvolving Confocal Images	142
Image Processing	142
Grayscale Operations	143
Image Arithmetic	145
Convolution: Smoothing and Sharpening	146
References	149
Further Reading	149

Chapter 11	Three-Dimensional Imaging: Stereoscopy and Reconstruction	151
	Surfaces: Two-and-a-Half Dimensions	151
	Perception of the 3D World	153
	Motion Parallax	153
	Convergence and Focus of Our Eyes	153
	Perspective	154
	Concealment of One Object by Another	154
	Our Knowledge of the Size and Shape of Everyday Things	154
	Light and Shade	154
	Limitations of Confocal Microscopy	154
	Stereoscopy	155
	Three-Dimensional Reconstruction	157
	Techniques That Require Identification of "Objects"	158
	Techniques That Create Views Directly from Intensity Data	161
	Simple Projections	161
	Weighted Projection (Alpha Blending)	163
	References	168
Chapter 12	Green Fluorescent Protein	169
	Structure and Properties of GFP	169
	GFP Variants	170
	Applications of GFP	175
	Heat Shock	176
	Cationic Lipid Reagents	176
	DEAE-Dextran and Polybrene	176
	Calcium Phosphate Coprecipitation	176
	Electroporation	177
	Microinjection	177
	Gene Gun	177
	Plants: <i>Agrobacterium</i>	179
	References	180
Chapter 13	Fluorescent Staining	181
	<i>Teresa Dibbayawan, Eleanor Kable, and Guy Cox</i>	
	Immunolabeling	181
	Types of Antibody	182
	Raising Antibodies	183
	Labeling	185
	Fluorescent Stains for Cell Components and Compartments	187
	References	190
Chapter 14	Quantitative Fluorescence	191
	Fluorescence Intensity Measurements	191
	Linearity Calibration	191

Measurement	192
Colocalization	192
Ratio Imaging	195
Cell Loading	199
Membrane Potential	199
Fast-Response Dyes	200
Slow-Response Dyes	200
Fluorescence Recovery after Photobleaching	201
References	205
Chapter 15 Advanced Fluorescence Techniques: FLIM, FRET, and FCS	207
Fluorescence Lifetime	207
Practical Lifetime Microscopy (FLIM)	209
Frequency Domain	209
Time Domain	209
Fluorescence Resonant Energy Transfer (FRET)	213
Why Use FRET?	214
Identifying and Quantifying FRET	215
Increase in Brightness of Acceptor Emission	215
Quenching of Emission from the Donor	219
Lifetime of Donor Emission	220
Protection from Bleaching of Donor	221
Fluorescence Correlation Spectroscopy (FCS)	223
Raster Image Correlation Spectroscopy	224
References	225
Further Reading	226
Chapter 16 Evanescent Wave Microscopy	227
The Near-Field and Evanescent Waves	227
Total Internal Reflection Microscopy	227
Near-Field Microscopy	230
References	236
Chapter 17 Beyond the Diffraction Limit	237
4Pi and Multiple-Objective Microscopy	237
Stimulated Emission Depletion (STED)	240
Structured Illumination	245
Stochastic Techniques	247
Super-Resolution Summary	252
References	253
Appendix A: Microscope Care and Maintenance	255
Cleaning	256
The Fluorescent Illuminator	259

Appendix B: Keeping Cells Alive under the Microscope	261
<i>Eleanor Kable and Guy Cox</i>	
Chambers.....	261
Light	265
Movement.....	265
Finally.....	265
Appendix C: Antibody Labeling of Plant and Animal Cells: Tips and Sample Schedules	267
<i>Eleanor Kable and Teresa Dibbayawan</i>	
Antibodies: Tips on Handling and Storage	267
Pipettes: Tips on Handling	268
Antibodies and Antibody Titrations.....	268
Example	268
Immunofluorescence Protocol.....	270
Method.....	270
Multiple Labeling and Different Samples	271
Plant Material	271
Protocol.....	272
Diagram Showing Position of Antibodies on Multiwell Slide	273
Appendix D: Image Processing with ImageJ	275
<i>Nuno Moreno</i>	
Introduction	275
Different Windows in ImageJ	275
Image Levels.....	276
Colors and Look-Up Tables	276
Size Calibration.....	277
Image Math	279
Quantification.....	280
Stacks and 3D Representation.....	280
FFT and Image Processing	282
Macro Language in ImageJ.....	283
Index	285
