Preface	ix
About the Author	xi
1 Systems Ecology: An Ecological Discipline	1
1.1 What Is Systems Ecology?	1
1.2 The Holistic Approach	4
1.3 Outline of the Book	4

PART 1 Sciences: Basic for Systems Ecology

2 Conservation of Energy and Matter	11
2.1 The Conservation Laws	11
2.2 Other Thermodynamic Functions	13
2.3 Liebig's Law of Minimum	18
2.4 Bioaccumulation and Biomagnification	22
2.5 Cycling in Ecosystems and in the Ecosphere	28
2.6 Energy Flows in Ecosystems	30
2.7 Summary of Important Points in Chapter 2	34
Exercises/Problems	36
3 Ecosystems: Growth and Development	37
3.1 The Maximum Power Principle	37
3.2 Embodied Energy/Emergy	41
3.3 Ecosystem as a Biochemical Reactor	45
3.4 Technological and Ecological Interpretation of the Thermodynamic Concept Exergy	48
3.5 Eco-Exergy and Information	54
3.6 Summary of Important Points in Chapter 3	56
Exercises/Problems	56

4	Irreversibility and Order: The Second and Third Laws of Thermodynamics.....	59
4.1	Open Systems	59
4.2	Physical Openness	60
4.3	Ontic Openness.....	61
4.4	The Second Law of Thermodynamics Interpreted for Ecosystems.....	67
4.5	The Third Law of Thermodynamics Applied on Open Systems.....	70
4.6	Dissipative Structure and Eco-Exergy	73
4.7	How to Calculate Exergy of Organic Matter and Organisms	73
4.8	Why Have Living Systems Such a High Level of Exergy?	81
4.9	Summary of Important Points in Chapter 4	82
	Exercises/Problems.....	82
5	The Biochemistry of Ecosystems	85
5.1	A General Biochemistry for Living Systems	85
5.2	The First Steps of the Evolution toward a Biochemistry.....	87
5.3	The Prokaryote Cells.....	89
5.4	The Eukaryote Cells	90
5.5	The Temperature Range Needed for Life Processes	92
5.6	Natural Conditions for Life.....	93
5.7	Ecological Stoichiometry.....	96
5.8	Summary of Important Points in Chapter 5	98
	Exercises/Problems.....	99
6	The Thermodynamic Interpretation of Ecosystem Growth and Development.....	101
6.1	Introduction	101
6.2	The Ecosystem Development Described by a Thermodynamic Interpretation of the Three Growth Forms	103
6.3	Seasonal Changes	109
6.4	New Ecosystems.....	110
6.5	Summary of Important Points in Chapter 6	111
	Exercises/Problems.....	113
7	The Ecological Law of Thermodynamics	115
7.1	Introduction: Darwin's Theory.....	115
7.2	The Ecological Law of Thermodynamics (ELT).....	118
7.3	Some Basic Ecological Observations (Rules) That Can Be Explained by ELT.....	119
7.4	Structurally Dynamic Models (SDMs).....	123
7.4.1	Development of SDM for Darwin's Finches	127
7.4.2	An Ecotoxicological SDM Example: Copper Changing the Size of Zooplankton.....	129
7.5	The Compliance between ELT and Evolutionary Theories.....	132
7.6	Summary of Important Points in Chapter 7	141
	Exercises/Problems.....	142

PART 2 Properties of Ecosystems

8	Ecosystems Are Open Systems	145
8.1	Why Must Ecosystems Be Open?	145
8.2	The Allometric Principles and Quantification of Openness.....	146
8.3	Summary of Important Points in Chapter 8	154
	Exercises/Problems.....	154
9	Ecosystems Have a Hierarchical Organization.....	155
9.1	The Hierarchical Organization.....	155
9.2	Interactions between the Hierarchical Levels.....	157
9.3	The Variations and the Hierarchical Organization.....	160
9.4	The Frequency of Disturbances.....	162
9.5	Ontic Openness and the Hierarchy Theory.....	165
9.6	Summary of Important Points in Chapter 9	166
	Exercises/Problems.....	167
10	Ecosystems Have a High Diversity	169
10.1	Introduction	169
10.2	The Wide Spectrum of Forcing Functions.....	170
10.3	The Molecular Differentiation in Biochemistry	172
10.4	The Genetic Differentiation.....	173
10.5	The Diversity of Cells	174
10.6	The Diversity of Organs.....	175
10.7	Diversity among Individuals	175
10.8	Species Diversity	176
10.9	Differentiation of Communities and Ecological Networks	179
10.10	Diversity of Ecosystems.....	179
10.11	The Advantages of a High Biodiversity.....	180
10.12	Diversity and Extreme Environment	184
	10.12.1 The Deep Sea.....	185
	10.12.2 Carnivorous Plants.....	187
10.13	Summary of Important Points in Chapter 10	188
	Exercises/Problems.....	188
11	Ecosystems Have a High Buffer Capacity.....	191
11.1	Introduction: Stability Concepts.....	191
11.2	The Intermediate Disturbance Hypothesis (IDH)	195
11.3	Hysteresis and Buffer Capacities.....	195
11.4	Chaos, Disturbances, and Buffer Capacities	202
11.5	Summary of Important Points in Chapter 11	211
	Exercises/Problems.....	212
12	The Components of Ecosystems Form Ecological Networks	213
12.1	Introduction	213
12.2	Ecological Networks Increase Utilization Efficiency of Matter and Energy.....	216

12.3	Cardinal Hypotheses about the Properties of Networks	218
12.4	Network Analyses.....	221
12.5	Network Selection by Ecosystems.....	236
12.6	Summary of Important Points in Chapter 12	238
	Exercises/Problems.....	238
13	Ecosystems Have a Very High Content of Information.....	241
13.1	The Information Embodied in the Genes.....	241
13.2	The Ascendency	242
13.3	Information Embodied in the Networks and Horizontal Evolution.....	248
13.4	Life Is Information	255
13.5	Summary of the Important Points in Chapter 13.....	258
	Exercises/Problems.....	258
14	Ecosystems Have Emerging Holistic System Properties	261
14.1	Introduction	261
14.2	Additional Properties of Ecosystems	265
14.3	Summary of Important Points in Chapter 14	267
	Exercises/Problems.....	268
15	Application of System Ecology in Ecological Subdisciplines and Environmental Management.....	269
15.1	Integrated Ecological and Environmental Management Should Be Based on a Profound Knowledge of System Ecology	269
15.2	The Application of Systems Ecology to Explain Ecological Observations and Rules	274
15.3	Application of Systems Ecology to Explain the Principles Applied in Ecological Engineering	278
15.4	Application of Systems Ecology to Assess Ecosystem Health	280
15.5	Summary of Important Points in Chapter 15	284
	Exercises/Problems.....	285
	References	287
	Appendix	297
	Index	299
