|-----------------------------------------------------------------------------------------|------|
| Preface .....                                                                           | ix   |
| Editor .....                                                                            | xiii |
| Contributors .....                                                                      | xv   |
| <b>Chapter 1</b> Introduction to Microarrays.....                                       | 1    |
| <i>Luis Rueda and Adnan Ali</i>                                                         |      |
| <b>Chapter 2</b> Biological Aspects: Types and Applications of Microarrays .....        | 41   |
| <i>Adnan Ali</i>                                                                        |      |
| <b>Chapter 3</b> Gridding Methods for DNA Microarray Images .....                       | 77   |
| <i>Iman Rezaeian and Luis Rueda</i>                                                     |      |
| <b>Chapter 4</b> Machine Learning-Based DNA Microarray Image Gridding.....              | 109  |
| <i>Dimitris Bariamis, Michalis Savelonas, and Dimitris Maroulis</i>                     |      |
| <b>Chapter 5</b> Non-Statistical Segmentation Methods for DNA Microarray<br>Images..... | 129  |
| <i>Shahram Shirani</i>                                                                  |      |
| <b>Chapter 6</b> Statistical Segmentation Methods for DNA Microarray<br>Images.....     | 149  |
| <i>Meng-Yuan Tsai, Tai-Been Chen, and Henry Horng-Shing Lu</i>                          |      |
| <b>Chapter 7</b> Microarray Image Restoration and Noise Filtering.....                  | 171  |
| <i>Rastislav Lukac</i>                                                                  |      |
| <b>Chapter 8</b> Compression of DNA Microarray Images.....                              | 195  |
| <i>Miguel Hernández-Cabronero, Michael W. Marcellin, and<br/>Joan Serra-Sagristà</i>    |      |

|                    |                                                                                                                                                                                                                    |     |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 9</b>   | Image Processing of Affymetrix Microarrays .....                                                                                                                                                                   | 227 |
|                    | <i>Jose Manuel Arteaga-Salas</i>                                                                                                                                                                                   |     |
| <b>Chapter 10</b>  | Treatment of Noise and Artifacts in Affymetrix Arrays.....                                                                                                                                                         | 255 |
|                    | <i>Caroline C. Friedel</i>                                                                                                                                                                                         |     |
| <b>Chapter 11</b>  | Quality Control and Analysis Algorithms for Tissue Microarrays<br>as Biomarker Validation Tools .....                                                                                                              | 283 |
|                    | <i>Todd H. Stokes, Sonal Kothari, Chih-wen Cheng, and May D. Wang</i>                                                                                                                                              |     |
| <b>Chapter 12</b>  | CNV-Interactome-Transcriptome Integration to Detect Driver<br>Genes in Cancerology.....                                                                                                                            | 313 |
|                    | <i>Maxime Garcia, Raphaële Millat-Carus, François Bertucci,<br/>Pascal Finetti, Arnaud Guille, José Adélaïde, Ismahane Bekhouche,<br/>Renaud Sabatier, Max Chaffanet, Daniel Birnbaum, and<br/>Ghislain Bidaut</i> |     |
| <b>Chapter 13</b>  | Mining Gene-Sample-Time Microarray Data .....                                                                                                                                                                      | 339 |
|                    | <i>Yifeng Li and Alioune Ngom</i>                                                                                                                                                                                  |     |
| <b>Chapter 14</b>  | Systematic and Stochastic Biclustering Algorithms for<br>Microarray Data Analysis.....                                                                                                                             | 369 |
|                    | <i>Wassim Ayadi, Mourad Elloumi, and Jin-Kao Hao</i>                                                                                                                                                               |     |
| <b>Chapter 15</b>  | Reconstruction of Regulatory Networks from<br>Microarray Data.....                                                                                                                                                 | 401 |
|                    | <i>Yiqian Zhou, Rehman Qureshi, Francis Bell, and Ahmet Sacan</i>                                                                                                                                                  |     |
| <b>Chapter 16</b>  | Multidimensional Visualization of Microarray Data.....                                                                                                                                                             | 431 |
|                    | <i>Urška Cvek and Marjan Trutschl</i>                                                                                                                                                                              |     |
| <b>Chapter 17</b>  | Bioconductor Tools for Microarray Data Analysis .....                                                                                                                                                              | 459 |
|                    | <i>Simon Cockell, Matthew Bashton, and Colin S. Gillespie</i>                                                                                                                                                      |     |
| <b>Index</b> ..... |                                                                                                                                                                                                                    | 481 |
