

CONTENTS

Preface		ix
Expert Commentary	Expressed Sequence Tags in Cancer Genomics <i>Vincent Navratil and Abdel Aouacheria</i>	1
Short Commentaries		9
Short Commentary A	Protein Bioinformatics for Drug Discovery Concavity Druggability and Antibody Druggability <i>Hiroki Shirai, Kenji Mizuguchi, Daisuke Kuroda, Haruki Nakamura, Shinji Soga, Masato Kobori and Noriaki Hirayama</i>	11
Short Commentary B	A Linkage Disequilibrium-Based Statistical Approach to Discovering Interactions Among SNP Alleles at Multiple Loci Contributing to Human Skin Pigmentation Variation <i>Sumiko Anno and Takashi Abe</i>	19
Short Commentary C	Sufficient Conditions for Exact Penalty in Constrained Optimization on Complete Metric Spaces <i>Alexander J. Zaslavski</i>	29
Short Commentary D	How to Create a Computational Medicine Study <i>Viroj Wiwanitkit</i>	39
Short Commentary E	Identifying Related Cancer Types <i>C. D. Bajdik, Z. Abanto, J. J. Spinelli, A. R. Brooks-Wilson, and R. P. Gallagher</i>	47
Research and Review Studies		57
Chapter 1	Sample Size Calculation and Power in Genomics Studies <i>Danh V. Nguyen, Damla Şentürk Danielle J. Harvey and Chin-Shang Li</i>	59

Chapter 2	Coupling Computational and Experimental Analysis for the Prediction of Transcription Factor E2F Regulatory Elements in the Human Gene Promoter <i>Kenichi Yoshida</i>	89
Chapter 3	Solving a Stochastic Generalized Assignment Problem with Branch and Price <i>David P. Morton, Jonathan F. Bard and Yong Min Wang</i>	99
Chapter 4	Reconstruction and Analysis of Large-Scale Phylogenetic Data, Challenges and Opportunities <i>Toni Gabaldón, Marina Marcet-Houben and Jaime Huerta-Cepas</i>	129
Chapter 5	Chromatin Fiber: 30 Years of Models <i>Julien Mozziconacci and Christophe Lavelle</i>	147
Chapter 6	Fast Modelling of Protein Structures Through Multi-level Contact Maps <i>Davide Baiù, Ian Walsh, Gianluca Pollastri and Alessandro Vullo</i>	165
Chapter 7	Coarse-Grained Structural Model of Protein Molecules <i>Kilho Eom and Sungsoo Na</i>	193
Chapter 8	Differentiating Superficial and Advanced Urothelial Bladder Carcinomas Based on Gene Expression Profiles Analyzed Using Self-Organizing Maps <i>Phei Lang Chang, Ke Hung Tsui, Tzu Hao Wang, Chien Lun Chen and Sheng Hui Lee</i>	215
Chapter 9	Full Sibling Reconstruction in Wild Populations From Microsatellite Genetic Markers <i>Mary V. Ashley, Tanya Y. Berger-Wolf, Isabel C. Caballero, Wanpracha Chaovalitwongse, Bhaskar DasGupta and Saad I. Sheikh</i>	231
Chapter 10	Recent Issues and Computational Approaches for Developing Prognostic Gene Signatures from Gene Expression Data <i>Seon-Young Kim and Hyun Ju Kim</i>	259
Chapter 11	Comparison of Φ -Values and Folding Time Predictions by Using Monte-Carlo and Dynamic Programming Approaches <i>Oxana V. Galzitskaya and Sergiy O. Garbuzynskiy</i>	277

Chapter 12	Computational Methods for Protein Structural Class Prediction <i>Susan Costantini and Angelo M. Facchiano</i>	315
Chapter 13	Fundamentals of Natural Computation in Living Systems <i>Abir U. Igamberdiev</i>	341
Chapter 14	Extraction of Position-Sensitive Promoter Constituents <i>Yoshiharu Y. Yamamoto and Junichi Obokata</i>	361
Chapter 15	Deconvolution of Positional Scanning Synthetic Combinatorial Libraries: Mathematical Models and Bioinformatics Approaches <i>Yingdong Zhao and Richard Simon</i>	375
Chapter 16	Scripting of Molecular Structure Viewer for Data Analysis Using Lua Language Interpreter <i>Yutaka Ueno</i>	389
Chapter 17	Computational Medicine Research in Hematology: A Study on Hemoglobin and Prothrombin Disorders <i>Viroj Wiwanitkit</i>	407
Index		419
