

CONTENTS

Preface		vii
Research and Review Studies		
Chapter 1	Highly Efficient Light-harvesting Nano- and Biomaterials: Material Design and New Laser Spectroscopy <i>Jun Takeda, Ikufumi Katayama, Ichiro Akai and Mutsumi Kimura</i>	1
Chapter 2	The FK506-Binding Proteins (FKBPs) of the Thylakoid: Emerging Roles in Plant Photosynthesis <i>Peter J. Gollan and Mrinal Bhawe</i>	43
Chapter 3	Thylakoid Protein Phosphorylation and its Impact on Short- and Long-term Acclimation of Photosynthesis <i>Paolo Pesaresi, Tatjana Kleine and Dario Leister</i>	81
Chapter 4	Impact of Root-zone Temperature on Photosynthetic Efficiency of Aeroponically Grown Temperate and Subtropical Vegetable Crops in the Tropics <i>Jie He</i>	111
Chapter 5	Photosynthesis of Methane and Hydrogen through Catalytic Reduction of Carbon Dioxide with Water <i>Seng Sing Tan</i>	145
Chapter 6	Two Closed-coil Photobioreactors Operating at High Dean Number in Dense Algal Cultures <i>Pietro Carlotto, Benjamin Pushparaj and Edoardo Pinzani</i>	163
Chapter 7	Synthetic Models of Photosynthetic Water Oxidizing Complex (OEC): O ₂ Evolution from Water by Heterogeneous Manganese-oxo Complexes <i>Masayuki Yagi, Hirosato Yamazaki, Takeshi Aoki and Komei Narita</i>	179

Chapter 8	Photosystem I as a Natural Example of the Efficient Bio-Solar Energy Nano-Converter <i>Alexey Amunts and Nathan Nelson</i>	193
Chapter 9	Multiplicity of NDH-1 Complexes in Cyanobacteria <i>Weimin Ma and Hualing Mi</i>	213
Short Communication		
	Natural Product Biosynthetic Gene Cluster from Cyanobacteria <i>Tomoyasu Nishizawa, Munehiko Asayama and Makoto Shirai</i>	227
Index		239
