

CONTENTS

Preface		vii
Chapter 1	Phage Display as a Tool for Synthetic Biology: New Perspectives in Nano-Biotechnology <i>Santina Carnazza and Salvatore Guglielmino</i>	1
Chapter 2	Integrative Biology of Aquaporins in Anuran Amphibians <i>Shigeyasu Tanaka and Masakazu Suzuki</i>	41
Chapter 3	Applications of Bacterial Quorum-Sensing Systems in Synthetic Biology <i>Daniel J. Sayut, Pavan K.R. Kambam, William G. Herrick and Lianhong Sun</i>	61
Chapter 4	Synthetic Morphology: Modules for Engineering Biological Form <i>Jamie A. Davies</i>	77
Chapter 5	Results of the Electron Microscopic Study of the Antarctic Species <i>Conotrochammina antarctica</i> Saidova, 1975 (Foraminifera) <i>A.-V. Mikhalevich</i>	93
Chapter 6	State-Dependency of Process Rates: A Clear Concept of Feedback in Biology <i>Jon Olav Vik and Stig W. Omholt</i>	105
Chapter 7	Translational Research: Novel Technologies, Impact on Sciences and Potential in Alternative Medicines <i>Christine Nardini</i>	123

Chapter 8	The Challenge of Combining Cells, Synthetic Materials and Growth Factors to Engineer Bone Tissue	149
	<i>Melba Navarro and Alexandra Michiardi</i>	
Chapter 9	Contributions of Synthetic Biology to the Field of the Origin of Life	199
	<i>Pier Luigi Luisi</i>	
Index		215
