|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Preface</b>   |                                                                                                                                                                                                                                                                                                        | <b>vii</b> |
| <b>Chapter 1</b> | Assessment and Testing by Genoproteomics<br>and Therapeutic Planning of Hereditary Ovarian Cancer<br><i>Andrea Tinelli, Valeria Mezzolla, Marilena Greco,<br/>Maurizio Pisanò, Giuseppe Leo, Giovanni Alemanno,<br/>Antonio Malvasi, Caterina Accettura, Marianna Giampaglia,<br/>and Vito Lorusso</i> | <b>1</b>   |
| <b>Chapter 2</b> | Selection Overrides Gene Flow<br>at "Evolution Canyons," Israel<br><i>Eviatar Nevo</i>                                                                                                                                                                                                                 | <b>67</b>  |
| <b>Chapter 3</b> | Gene Libraries and Functional Genomic<br>Analysis of Entomopathogenic Nematode Parasitism<br><i>You Jin Hao and Nelson Simoes</i>                                                                                                                                                                      | <b>91</b>  |
| <b>Chapter 4</b> | Methods for the Investigation<br>of Chromosome Organization<br><i>Ralph S. Grand, Lutz R. Gehlen<br/>and Justin M. O'Sullivan</i>                                                                                                                                                                      | <b>111</b> |
| <b>Chapter 5</b> | Role of CCDC26, a Novel Non-Coding RNA,<br>in Human Acute Myeloid Leukemia<br><i>Tetsuo Hirano</i>                                                                                                                                                                                                     | <b>131</b> |
| <b>Chapter 6</b> | The Deleterious Effect of Missense Mutations<br>on Pre-mRNA Splicing<br><i>Vânia Gonçalves and Peter Jordan</i>                                                                                                                                                                                        | <b>141</b> |
| <b>Index</b>     |                                                                                                                                                                                                                                                                                                        | <b>153</b> |
