|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| <b>Preface</b>   |                                                                                                                                                                                                     | <b>vii</b>             |
| <b>Chapter 1</b> | Proteomics in Celiac Disease<br><i>V. De Re, MP. Simula, L. Caggiari, A. Pavan ,<br/>V. Canzonieri and R. Cannizzaro</i>                                                                            | <b>1</b>               |
| <b>Chapter 2</b> | The Puzzle of Protein Location in Plant Proteomics<br><i>Elisabeth Jamet and Rafael Pont-Lezica</i>                                                                                                 | <b>15</b>              |
| <b>Chapter 3</b> | What Future for "Gel-Based Proteomic"<br>Approaches?<br><i>François Chevalier</i>                                                                                                                   | <b>31</b>              |
| <b>Chapter 4</b> | Algorithms for the Quantification of Proteins from<br>High-Throughput Liquid Chromatography-Mass<br>Spectrometry (LC-MS) Data<br><i>Ole Schulz-Trieglaff</i>                                        | <b>53</b><br><b>53</b> |
| <b>Chapter 5</b> | Method for Prediction of Protein-Protein Interactions<br>in Yeast using Genomics/Proteomics Information<br>and Feature Selection<br><i>J.M. Urquiza, I. Rojas, H. Pomares<br/>and L. J. Herrera</i> | <b>77</b>              |
| <b>Chapter 6</b> | Label-Free Liquid Chromatography-Based<br>Quantitative Proteomics: Challenges<br>and Recent Developments<br><i>A. Matros, S. Kaspar, S. Tenzer, M. Kipping,<br/>U. Seiffert and H.-P. Mock</i>      | <b>103</b>             |

|                   |                                                                                                                                                                                     |            |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Chapter 7</b>  | Insights from Proteomics into Mild Cognitive Impairment, Likely the Earliest Stage of Alzheimer's Disease<br><i>Renā A. Sowell and D. Allan Butterfield</i>                         | <b>137</b> |
| <b>Chapter 8</b>  | Multidimensional Chromatography: An Essential Tool for Proteomics<br><i>Chiara Cavaliere, Eleonora Corradini, Patrizia Foglia, Piero Giansanti, Roberto Samperi and Aldo Laganà</i> | <b>165</b> |
| <b>Commentary</b> | Proteomic Approach in Analysing Cardiac Responses on Low-Dose Ionising Radiation Using Cellular and Tissue Models<br><i>Soile Tapio</i>                                             | <b>175</b> |
| <b>Index</b>      |                                                                                                                                                                                     | <b>181</b> |
