Preface

vii

1. Introduction

1

Phases of Matter • Carbon-based Life • Molecular Evolution
• Hypothetical Types of Biochemistry • Other Types of
Speculations • Organic Compound • Classification of Organic
Compounds • Biosynthetic Pathways • Enzyme Catalysis
• Catabolism • Metabolism • Cofactor • Metabolic Pathway

2. Chemistry of Carbohydrate and Proteins

62

Chemistry of Carbohydrate • Aldoses • Ketoses • Monosaccharide
Derivatives • Carbohydrate Synthesis • Glycosidic Bond
Formation • Current Methods in Glycoside Synthesis • Fischer
Glycosidation • Koenigs-Knorr Reaction • Protecting Groups
• Oligosaccharides • Carbohydrate-mediated Cell Adhesion
• Molecular Recognition and Catalysis • Supramolecular
Metalloproteins • Metalloproteins • Iron-sulfur Protein
• Structural Motifs • Signal-transduction Metalloproteins
• Cytochrome P-450 • Molecular Binding of Metal Complexes
by Macrocycles • Coordination Complex • Molecule • Molecular
Recognition • Crown Ether • Crown Ethers in Nature • Acyclic
Diterpenoids • Terpenoid • Biosynthesis

3. Molecular Devices

119

Deoxyribonucleic Acid • Properties • Base Pairing • Sense and
Antisense • Supercoiling • Alternate DNA Structures
• Quadruplex Structures • Chemical Modifications • Biological
Functions • DNA Replication • DNA Polymerase • DNA
Replication within the Cell • Dynamics at the Replication Fork
• Polymerase Chain Reaction • DNA-modifying Enzymes
• Topoisomerases and Helicases • Genetic Recombination
• DNA Microarray • Significance Analysis of Microarrays • Cell
Signalling and Gene Transcription • Unicellular and
Multicellular Organism Cell Signalling • Classification of

Intercellular Communication • Gene Transcription • Major Steps
 • Transcription Factories • Designing Designs for Research
 • Minimizing Threats to Validity • Advances in Quasi-
 Experimentation • The Advantages of Multiple Perspectives
 • Evolution of the Concept of Validity • Development of
 Increasingly Complex Realistic Analytic Models

4. Enzyme Chemistry

176

Organic Food • Nutritional Value and Taste • Organic Clothing
 • Organic Cotton • Organic Baby Products • Defining Large
 Proteins and M13 Coat Proteins • Phage Particles • Helices
 and Metallacycles • Arc Length, Curvature and Torsion
 • Texaphyrin-type Expanded Porphyrins • Porphyrin • A
 Porphyrin-related Disease: Porphyria • Signs and Symptoms
 • Diagnosis • Porphyrin Coordinated to Iron: Heme • Porphin
 • General Properties of the Cycloalkanes • Nomenclature
 • IUPAC Nomenclature • Aims of Chemical Nomenclature
 • Types of Nomenclature • Monosaccharides • General Formula
 of Carbohydrates • D- and L-glucose

5. Biochemistry of Blood Cell

223

Blood Cell, Vitamins and Cytoplasm • Nucleus • Mammalian
 Erythrocytes • Human Erythrocytes • Diseases and Diagnostic
 Tools • White Blood Cells (Leukocytes) • Medication Causing
 Leukopenia • Platelets (Thrombocytes) • Role in Disease
 • Vitamins • Nutrition and Diseases • Vitamins for Building
 Red Blood Cells and Immune System • Blood
