

CONTENTS

Preface to the Second Edition

vii

Preface to the First Edition

ix

1. **INTRODUCTION** 1
Chief events in animal development – History of thoughts and conceptual developments – Experimental embryology – Developmental genetics
2. **GAMETOGENESIS** 5
Origin of germline cells in mouse- Origin and mechanism of germ cell lineage in other vertebrates-Migration of germ cells to genital ridge - Germ cells in the genital ridge and sex determination-Gamete formation - Significance of gametogenesis
3. **SPERMATOGENESIS** 11
Sperm structure – Head, midpiece, and sperm flagellum - Types of sperm – Typical and atypical spermatozoa - Sperm cell formation - Spermiogenesis - Primitive sperm type and external fertilization - Modified spermatozoa with internal fertilization - Endocrine regulation of spermatogenesis
4. **OOGENESIS** 19
Ovary and germ cell development - Stages of Oogenesis - Composition of yolk - Vitellogenesis- Oogenesis in Amphibians - Previtellogenic phase, Vitellogenic phase, Heterosynthetic derivation of yolk, Genetic control of vitellogenin synthesis in amphibians, Endocrine regulation of vitellogenesis and egg maturation - Oogenesis in Insects - Vitellogenesis, Vitellogenins and Vitellins, Vitellogenin uptake into the oocytes, Hormonal regulation of vitellogenesis, Genetic control of vitellogenin synthesis - Types of eggs - Egg envelopes and polarity – Types of eggs – Egg envelopes: Primary egg envelope, Secondary envelope, Tertiary envelopes - Polarity and symmetry
5. **FERTILIZATION** 33
Sperm aggregation – Sperm activation – Chemotaxis - Sperm maturation and capacitation in mammals - Acrosome reaction - Sperm-egg interaction - Sperm entry into egg - Egg activation – Electrical events and prevention of polyspermy - intracellular calcium release and egg activation - signalling molecules and mechanisms of Ca^{2+} release - Cortical reaction - Physiological polyspermy - Fusion of male and female pronuclei - Post fertilization metabolic activation – Parthenogenesis
6. **CLEAVAGE** 48
Mechanism of cleavage - Patterns of embryonic cleavage - Radial holoblastic cleavage - Spiral cleavage - Bilateral holoblastic cleavage - Rotational holoblastic cleavage - Amphibians - Meroblastic cleavage - Superficial cleavage

	- Determinate and regulatory embryos - Cell lineage - Nuclear transplantation experiments - Cloning - Transgenesis	
7.	GASTRULATION Molecular mechanisms determining germ layers formation - Factors affecting gastrulation - Cellular and molecular mechanics of gastrulation movements - Types of gastrulation movements - Epiboly, Invagination, Involution, Ingression - Types of gastrulation in representative animal embryos - Sea urchin, Amphioxus, Amphibians - Neuwkoop centre - Exogastrulation - Gastrulation of avian embryos- Gastrulation in mammals - Comparative aspects of gastrulation - Fate maps - Fate map of sea urchin blastula - Fate mapping in amphibian eggs - Fate map of chick embryo	63
8.	EMBRYONIC INDUCTION AND NEURULATION Inductive interaction and neurulation - Neurulation in amphibians - Mechanism of neural tube formation	81
9.	NEURAL CREST CELLS Formation and migration of neural crest cells - Control of neural crest migration - The cranial neural crest - Tooth development - Neural crest cells and axial patterning - cardiac neural crest - Trunk neural crest - Mechanism of trunk neural crest migration	86
10.	CELL DIFFERENTIATION Mechanism of gene action during cell differentiation - Epigenetics - Factors influencing cellular differentiation	90
11.	DEVELOPMENTAL GRADIENTS Developmental gradients in <i>Hydra</i>	94
12.	AXIS SPECIFICATION <i>Drosophila</i> - anterior-posterior polarity - Bicoid protein - Nanos and caudal proteins -Formation of terminal body structures - dorsal-ventral polarity - Genetic control of body segmentation - Gap genes - Pair-rule genes - Segment polarity genes - The homeotic genes - Axial gradients in vertebrates (<i>Xenopus</i>) - Axis formation in mammalian embryos - <i>Hox</i> genes - <i>Hox</i> gene regulation of axial morphogenesis in mouse	97
13.	DEVELOPMENTAL CYCLE AND MORPHOGENESIS IN THE SLIME MOULD DICTYOSTELIUM DISCOIDEUM Life cycle - Polarity, Pattern formation and morphogenesis - Role of mitochondria in growth/Differentiation transition - Gene expression during cell growth - Chemotaxis and cAMP signalling - Morphogenetic gradients and pattern formation and gene expression	105
14.	ORGANOGENESIS Formation of vertebrate brain - Formation of brain regions - Placodes - Development of the eye - Heart formation in frog and chick - Frog - Formation	110

of the primitive cardiac tube - Formation of the heart proper - Development of blood vessels and corpuscles - Chick - Urinogenital organogenesis - Pronephros, Mesonephros, Metanephros, Inductive interactions between the ureteric bud and the mesenchymal cells - Sexual differentiation - Freemartin and MIS - Genes involved in gonadal differentiation - Action of sex chromosomes in male and females - origin and evolution of sex chromosome

15. **PATTERN FORMATION AND DEVELOPMENT OF LIMB** 124
Development of vertebrate limb bud - origin of limb bud - Development of wing bud - Role of *Hox* genes in limb patterning - Cellular interaction within the developing wing bud
16. **DEVELOPMENT OF IMMUNE SYSTEM** 130
Origin of the immune system - Organization of the immune system - Primary lymphoid organs - secondary lymphoid organs - T Cells - B Cells - natural killer cells - Macrophages - Dendritic and Langerhans cells - Other accessory cells - Immunoglobulins - Major Histocompatibility Complex - Expression of MHC molecules - MHC loci - Complement system - Cytokines - Neonatal immunity - Maternal immunity - Gene conversion - Disorders in immune system - Allergy - Auto immunity - Acquired immuno deficiency syndrome
17. **EMBRYONIC NUTRITION** 139
Oviparity and yolk utilization - Biochemical composition of yolk - Yolk utilization
18. **EXTRA EMBRYONIC MEMBRANES** 145
Extraembryonic membranes in birds - Yolk sac, Amnion, Chorion, Allantois - Extra embryonic membranes in mammals
19. **PLACENTATION** 150
Placenta of mammals - Implantation - Formation of placenta in Humans - Physiology of placenta - Evolution and classification of placenta - Yolk sac placenta, Allantoic placenta
20. **GROWTH** 157
Types of growth in multicellular organisms - Growth rate - Measurement of growth rate - Growth curve - Mechanism of Cell proliferation - Control of cell growth - Effect of growth hormone and mammalian growth
21. **METAMORPHOSIS** 162
Amphibian metamorphosis - Thyroid hormone receptor - Gene regulation during amphibian metamorphosis - Neoteny - Moulting and metamorphosis in insects - Ecdysteroids action during insect metamorphosis - Role of juvenile hormone in metamorphosis
22. **REGENERATION** 169
Types of regeneration - Regeneration in *Hydra* - Cell proliferation and loss during *Hydra* growth - Role of epithelial cells in *Hydra* regeneration - Axial patterning during regeneration - Morphogenesis during head regeneration -

	Regeneration in Planarians - Blastema formation - Urodele limb regeneration - Morphogenesis and redifferentiation - Sources of blastemal cells - Factors stimulating regeneration of limbs - Pattern formation in the blastema - Autotomy and limb regeneration in crab - Hormonal control of regeneration in crab leg	
23.	EXPERIMENTAL EMBRYOLOGY Mammalian reproductive cycle - Hormonal regulation of reproductive cycle - Endocrine changes associated with normal pregnancy - Induced ovulation in humans - Multiple ovulation and embryo transfer in cattle - Embryo splitting - <i>In vitro</i> fertilization - IVF in cattle - IVF in humans - Cryopreservation - Methods adopted in cryopreservation - Cryopreservation of human spermatozoa - Human embryo cryopreservation - Ethical issues in cryopreservation	180
24.	STEM CELL BIOLOGY Molecular basis of self-renewal and pluripotency - Discovery of stem cells - culture of stem cells - Stem cell niches - Types of stem cells - Adult stem cells - Stem cell division - Types of adult stem cells - Haematopoietic stem cells (HSCs) - Mesenchymal stem cells (MSC) - Multipotent adult progenitor cells (MAPC) - Skeletal muscle stem cells (SMSC) - Cardiac stem cells - Differentiation of embryonic cells into the cardiac lineage - Neural stem cells (NSCs) - Dermal stem cells - gut stem cells - Stem cells in hydracancer stem cells - Ageing of stem cells - embryonic stem cells - Transcriptional control of pluripotency in es cells - Origin of embryonic stem cells in mouse - Surface antigen markers and identification of es cells - <i>In vitro</i> differentiation of Es cells in mouse - Gene expression during eb differentiation - Human embryonic stem cells - Telomerase expression - Gamete production from embryonic stem cells - Therapeutic use of stem cells - Induced pluripotent stem (iPS) cells - First production of viable mice from iPS cells - Regenerative therapy of the heart - Muscular dystrophy - Stem cell therapy of the human central nervous system - Multiple sclerosis - Parkinson disease - Spinal cord injury and disease - Cell based therapy of motor neuron diseases - Stem cells as chaperons - Constraints in stem cell therapy - Ethical considerations of stem cell research	189
25.	THERAPEUTIC USE OF MESENCHYMAL STEM CELLS Introduction - What are mesenchymal stem cells - Location of mscs - Use of MSCS in medicine and tissue engineering - Use of MSCS in lung diseases - how are MSCS isolated and characterized - Protocol for isolation and culture of mesenchymal stem cells from mouse bone marrow materials reagents equipment - Reagent setup - harvest buffer - Complete dmem medium - Pcedure - anticipated results	217
26.	CANCER BIOLOGY Introduction - Origin of cancer - Characteristics of cancer cells - Genomic alterations as the basis of tumorigenesis - Cancer cell transformation - Chromosomal aberration in cancer cells - Tumor categories - Tumor promotion and tumor initiation - Tumor promotion - Tumor initiation - Genes involved in cancer development - Signal transduction and oncogene activation - Tumor	222

suppressor genes - p53 tumor suppressor protein - DNA repair genes - Human genetics and cancer - Genes known to be involved in some cancer types - Breast cancer - Hereditary breast and ovarian cancer (h boc) syndrome - Ataxia telangiectasia (a-t) - Li-fraumeni syndrome (lfs) - Cowden syndrome (cs) - Peutz-jeghers syndrome (pjs) - Prostate cancer - Colorectal cancer - Hereditary non-polyposis colorectal cancer (hnpcc) - Familial adenomatous polyposis (fap) - Muir-torre syndrome - gardner syndrome - Turcot syndrome - Myh-associated polyposis (map) - Peutz-jeghers syndrome (pjs) - Juvenile polyposis syndrome (jps) - Kidney cancer - Von hippel-lindau syndrome (vhl) - Hereditary non-Vhl clear cell renal cell carcinoma - Hereditary papillary renal cell carcinoma (hprcc) - Birt-hogg-dubé syndrome (bhd) - Hereditary leiomyomatosis and renal cell carcinoma (hlrcc) - Beckwith-wiedemann syndrome (bws) - Li-fraumeni syndrome (lfs) - Tuberous sclerosis complex (tsc) - Cowden syndrome (cs) - melanomas - Hereditary melanoma - Melanoma-astrocytoma syndrome - Xeroderma pigmentosum (xp) - Retinoblastoma - Li-fraumeni syndrome - Werner syndrome - Hereditary breast and ovarian cancer - Cowden syndrome - pancreatic cancer - Hereditary pancreatitis (hp) - Peutz-jeghers syndrome (pjs) - Familial atypical multiple mole melanoma and pancreatic cancer (famm-pc) - Hereditary breast and ovarian cancer (h boc) syndrome - Hereditary non-Polyposis colorectal cancer (hnpcc) - Li-fraumeni syndrome (lfs) - Thyroid cancer - Medullary thyroid cancer - Men 2a - Men 2b - Familial medullary thyroid cancer (fm tc) - Papillary and follicular thyroid cancer - Familial papillary thyroid cancer - Familial adenomatous polyposis (fap) - Cowden syndrome (cs) - Cell cycle - Angiogenesis - Viruses and cancer - Environmental factors - Evolutionary and ecological aspect of cancer - cancer stem cells - Discovery and origin of cscs - Cancer stem cells - Tumor migration and metastasis - Role of epithelial to mesenchymal transition in cancer invasion and metastasis - Cell signaling pathways in cancer stem cells - Identification of cancer stem cells and therapeutic intervention - Current challenges and future directions for cancer therapy

27. MOLECULAR AND EVOLUTIONARY DEVELOPMENTAL BIOLOGY 259

Origin of the new science developmental basis of animal evolution - Developmental genes and evolution - Mechanism of gene regulation during development - CRE control of wing pigmentation in insects - Study of homology - Hox genes and body axis formation - Hox genes and the evolution of tetrapod limb - Homology in wnt gene family - Hedgehog gene family - Evolution and spread of hox genes - Hox genes and body segmentation in arthropods - Conserved role of pax6 in eye formation - Evolutionary control of eye development - Developmental basis of morphological variation in the beaks of darwin's finches - Evolutionary pelvic reduction in three-spine sticklebacks - Evo- devo and human evolution - Protein modification and evolution - regulatory RNAs - A conclusion to genetic theory of morphological evolution

28. ECOLOGICAL DEVELOPMENTAL BIOLOGY 284

Environmental influence on normal development - Polyphenism - Environmental cues and development of new phenotypes in tadpoles -

	Hormonal regulation of temperature-Dependent polyphenism - Temperature and sex determination in reptiles	
29.	TERATOGENESIS AND MEDICAL EMBRYOLOGY Thalidomide and phocomelia - Valproic acid (va) and autism - Retinoic acid - mechanism of drug action - Industrial mercury and minamata disease - teratogenic effects of alcohol - Endocrine disruptors and developmental alterations - Effect of environmental contaminants on wildlife - Toxicity studies using embryonic stem cells	288
30.	PROGRAMMED CELL DEATH OR APOPTOSIS Processes associated with apoptosis - Incidence of Apoptosis - Apoptosis during animal development - Apoptosis in metamorphosis and morphogenesis - Apoptosis in <i>C.elegans</i> - Apoptosis in lens development - Apoptosis in neural cells - Apoptosis during vertebrate limb development - Apoptosis in immune cells - Apoptosis in response to DNA damage and cellular stress - Biochemical and molecular mechanisms involved in apoptosis - Biochemical pathways in mammalian cell apoptosis - Role of BCL-2 family proteins - Macrophage-induced apoptosis - Factors controlling apoptosis - Germ cell apoptosis during spermatogenesis - Apoptosis in female germ cells - Mechanism of oocyte apoptosis - Theories to explain female germline cell death	301
31.	AGEING AND SENESCENCE Cellular ageing - Reactive oxygen and cell senescence - Dietary restriction and anti-ageing action - Resistance to oxidative stress - Telomerase theory - Hayflick limit - Ageing of brain cells - Genetic control of longevity - <i>C.elegans</i> - Genetic control of ageing in yeast - Genetic control of ageing in mammals - Age-related diseases: Alzheimer's disease - Protein aggregation as a causative agent of age-related diseases - Aggregation of TAU protein - Cataract - Werner's syndrome	312
32.	PLANT DEVELOPMENT Embryonic development in angiosperms - Post-embryonic growth - Meristems - Structure of shoot meristem - Leaf development - Pattern formation in leaf development - Patterning in leaf venation - Patterning in the epidermis - The vegetative to Reproduction transition - Flower development - Genetic pathways regulating floral transition - Homeotic genes and organ identity in the flowers - Root development - Regeneration and somatic embryogenesis - Transgenic plants	322
