Preface	xiii
Model examples, software, homepages and contact person for the various model types	xv
Chapter 1	
Introduction: sub-disciplines of ecology and the history of ecological modeling	1
<i>S.E. Jørgensen</i>	
1 History of the ecological sub-disciplines	1
2 The development of ecological modeling	5
Chapter 2	
Overview of the model types available for ecological modeling	9
<i>S.E. Jørgensen & T.-S. Chon</i>	
1 Issues in model development	9
1.1 Presentation of spatial distribution	11
1.2 Computational realization of biological properties	15
1.3 Revealing environmental factors	17
1.4 Data handling and model construction	18
2 Increasing number of model types	19
3 Characteristics of the model types available today	21
3.1 Dynamic models: Chapters 5 and 11	22
3.2 Static models: Chapters 5 and 11	23
3.3 Population dynamic model: Chapter 12	24
3.4 Structurally dynamic models: Chapter 13	25
3.5 Fuzzy models: Chapter 8	26
3.6 Models in ecological informatics: Chapter 9	27
3.7 Individual-based models and cellular automata: Chapters 7 and 16	28
3.8 Spatial models: Chapters 6 and 20	30
3.9 Ecotoxicological models: Chapters 14 and 15	31
3.10 Stochastic models: Chapter 12	33
3.11 Rule-based models: Chapter 17	34
3.12 Hybrid models: Chapter 10	35

3.13 Mediated/institutionalized models: Chapters 4 and 19	35
3.14 Network analyses and calculations: Chapter 18	37
4 Applicability of the model types	37

Chapter 3

Ecological informatics: current scope and feature areas	41
--	-----------

F. Recknagel

1 Introduction	41
2 Feature areas	43
3 Future directions	44

Chapter 4

Model making	49
---------------------------	-----------

S.E. Jørgensen

1 Modelling procedure	49
2 Institutionalized modeling	51
2.1 The institutionalized modelling process	52
3 When to apply IMM?	53

Chapter 5

Ecopath with Ecosim: linking fisheries and ecology	55
---	-----------

V. Christensen

1 Why ecosystem modeling in fisheries?	55
2 The Ecopath with Ecosim (EwE) modeling approach	56
2.1 Model overview	56
2.2 Mass-balance	56
2.3 The foraging arena	58
2.4 Ecosim	59
3 EwE modules and applications	60
5 EwE applications	61
6 Getting hold of the EwE software	62
7 Exercise: trawling cultivates the ocean bottom for squid	63

Chapter 6

Surface modelling of population distribution	71
---	-----------

T.-X. Yue, Y.-A. Wang & Z.-M. Fan

1 Introduction	71
2 YUE-SMPD	72
2.1 Approaches to population distribution analyses	72
2.2 YUE-SMPD formulation	73
3 An application of YUE-SMPD	74
3.1 Major data layers	74
3.2 YUE-SMPD operation	86
3.3 Change trend of population distribution in China	87
3.4 Scenarios of population distribution in China	90
4 Discussion	92

Chapter 7

Individual-based models 99

T.-S. Chon, Sang Hee Lee, C. Jeoung, H.K. Cho, Seung Ho Lee & Y.-J. Chung

1	Introduction	99
2	Properties of individuals	100
3	Model construction	101
3.1	Program outline and system environment	101
3.2	Variables	102
3.3	Model structure and interaction	102
3.4	Parameters and input data	102
3.5	Output and model results	102
4	Case study 1: flocking behavior	103
4.1	Program outline and system environment	103
4.2	Variables	103
4.3	Model structure and interaction	105
4.4	Parameters and input data	107
4.5	Output and results	107
5	Case study 2: population dispersal	109
5.1	Program outline and system environment	109
5.2	Variables	111
5.3	Model structure and interaction	113
5.4	Parameters and input data	113
5.5	Output and results	114

Chapter 8

A fuzzy approach to ecological modelling and data analysis 125

A. Salski, B. Holsten & M. Trepel

1	Imprecision, uncertainty and heterogeneity of environmental data	125
2	Fuzzy sets and fuzzy logic in ecological applications	126
2.1	Fuzzy classification and spatial data analysis	126
2.2	Fuzzy modelling, decision making and ecosystem management	127
2.3	Hybrid approaches to data analysis and ecological modelling	127
3	Fuzzy classification: a fuzzy clustering approach	127
3.1	An application example: fuzzy classification of wetlands for determination of water quality improvement potentials	129
4	Fuzzy modelling	132
4.1	An application example: a fuzzy and neuro-fuzzy approach to modelling cattle grazing in Western Europe	134
5	Final remarks	138

Chapter 9

Ecological informatics by means of neural, evolutionary and object-oriented computation 141

F. Recknagel & H. Cao

1	Introduction	141
2	Artificial neural networks	141
2.1	Supervised feedforward ANN	143
2.2	Supervised feedback ANN	144
2.3	Non-supervised ANN	145

2.4 Evolutionary algorithms	150
2.5 Object-oriented programming	153
3 Conclusions	160

Chapter 10

Hybridisation of process-based ecosystem models with evolutionary algorithms: multi-objective optimisation of process and parameter representations of the lake simulation library SALMO-OO

169

H. Cao & F. Recknagel

1 Introduction	169
2 Evolutionary algorithm for the optimisation of process representations and parameters	170
2.1 Encoding	171
2.2 Fitness evaluation	171
2.3 Genetic operators	172
3 Optimisation of process representations in SALMO-OO by means of EA	172
3.1 Experimental settings and measures	172
3.2 Results and discussion	175
4 Case study of parameter optimisation in SALMO-OO	176
4.1 Experimental settings and measures	176
4.2 Results and discussion	178
5 Conclusions and future work	184

Chapter 11

Biogeochemical models

187

S.E. Jørgensen

1 The characteristics of biogeochemical models	187
2 The application of biogeochemical models	188
3 Biogeochemical models	190
4 Model of sub-surface wetland	190
4.1 The state variables	191
4.2 Forcing functions	193
4.3 Process equations	194
4.4 Parameters	195
4.5 Differential equations	195
4.6 Model results	197
4.7 Additional results	197
4.8 Comparison of simulated and measured values	197
4.9 Practical information about forcing functions and parameters	198

Chapter 12

Stochastic population dynamic models as probability networks

199

M.E. Borsuk & D.C. Lee

1 Introduction	199
1.1 Population dynamic models	199
1.2 Stochasticity	199
1.3 Stochastic models	200
1.4 Probability networks	201
2 Methods	201

2.1	Model construction	201
2.2	Communicating results	202
2.3	Use of probability networks	202
3	Example models and their applications	203
3.1	BayVAM and westslope cutthroat trout in the Upper Missouri River Basin, USA	203
3.2	CATCH-Net and brown trout in the Rhine River Basin, Switzerland	210
4	Availability of models and software	217
4.1	BayVAM/Netica	217
4.2	CATCH-Net/Analytica	217

Chapter 13

Structurally dynamic models 221

S.E. Jørgensen

1	Introduction: why structurally dynamic models?	221
2	Ecosystem characteristics	221
3	Structurally dynamic models	226
4	Development of SDM for Darwin's finches	233
5	Model of the ectoparasite-bird interactions	234

Chapter 14

Ecotoxicological models 241

S.E. Jørgensen

1	Introduction: characteristics of ecotoxicological models	241
2	Classification of ecotoxicological models	242
2.1	Food chain or food web dynamic models	242
2.2	Static models of the mass flows of toxic substances	242
2.3	A dynamic model of a toxic substance in one trophic level	243
2.4	Ecotoxicological models in population dynamics	245
2.5	Ecotoxicological models with effect components	245
3	The application of parameter estimation methods in ecotoxicological modelling	247
4	Biogeochemical and ecotoxicological models: tylosine	250
4.1	The equations	251
4.2	State variables	251
4.3	Differential equations and initial values: (process abbreviations, see below)	251
4.4	Site-specific parameter	251
4.5	Climatic forcing functions as graphs	251
4.6	Processes	251

Chapter 15

Behavioral methods in ecotoxicology 255

T.-S. Chon, C.W. Ji I, Y.-S. Park & S.E. Jørgensen

1	Why behavioral methods in ecotoxicology?	255
1.1	Behavioral monitoring	255
1.2	Behaviors linked with genes and populations	256
2	Monitoring at the individual level	257
2.1	Monitoring processes	257
2.2	Data preparation	258
2.3	Statistical description	259
2.4	Analysis of data structure	262

2.5 Pattern detection by learning method	264
3 Modeling the gene-individual-population relationships	270
3.1 Program outline and system environment	271

Chapter 16

Cellular automata	283
--------------------------------	------------

Q. Chen

1 Introduction to cellular automata	283
1.1 Definition of cellular automata	283
1.2 Neighbourhood schemes	284
1.3 Local evolution rules	284
1.4 Initial conditions	285
1.5 Boundary conditions	285
1.6 Development of cellular automata	286
2 Development and application of EcoCA	286
2.1 Development of EcoCA	286
2.2 Application of EcoCA	288
2.3 User guide for EcoCA	293
3 Development and application of LYC	295
3.1 Description of study area	296
3.2 Model development	297
3.3 Results and discussion	299
3.4 User guide for LYC	302
4 Discussion	303

Chapter 17

Rule-based ecological model	307
--	------------

Q. Chen & A. Mynett

1 Introduction to rule-based technique	307
1.1 Feature reasoning	307
1.2 Case reasoning	309
1.3 Decision tree	309
2 Rule-based modelling of algal biomass in Dutch coastal waters	311
2.1 Description of study area	311
2.2 Model development	312
2.3 Model testing	313
3 Integrated numerical and rule-based technique	313
3.1 Description of study area	314
3.2 Model development	314
3.2 Results	318
4 Discussion	319
5 User guide for FuzzHab	320
5.1 Factor selection	320
5.2 Rule generation	320
5.3 Modelling	321

Chapter 18

Network calculations II: a user's manual for EcoNet 325

C. Kazanci

1	Introduction	325
2	How to create an EcoNet model	327
2.1	EcoNet model structure	327
2.2	EcoNet model flexibility	328
2.3	A few rules about EcoNet models	329
3	How to run an EcoNet model	330
3.1	Fourth-order Runge-Kutta method	331
3.2	Numerical solution methods	332
3.3	Stochastic method	333
3.4	From model to differential equation	334
4	Simulation and analysis results	335
4.1	Network diagram	335
4.2	Time-course plot and data of compartment storage values	336
4.3	Model information	338
4.4	Adjacency matrix	338
4.5	Flow coefficient matrix	338
4.6	Flow matrix	340
4.7	Network analysis	341
4.8	Storage analysis	341
4.9	Throughflow analysis	342
4.10	Utility analysis	344
5	Study of an EcoNet model	345
5.1	Model description	345
5.2	Flow analysis	346
5.3	Storage and utility analysis	348
5.4	Further analysis	349

Chapter 19

Mediating conceptual knowledge using qualitative reasoning 351

B. Bredeweg & P. Salles

1	Introduction	351
2	Background and principles	352
2.1	How does it work?	352
2.2	Model ingredients	353
2.3	Qualitativeness	354
2.4	Causality	355
2.5	Inequality reasoning	356
2.6	Correspondences	357
2.7	Model fragments: reusing partial models	357
2.8	Generating a state-graph	358
3	Garp3: QR workbench	359
3.1	Build environment	361
3.2	Simulate environment	365
3.3	Special features and support	368
3.4	Support and getting started	373
4	Examples of QR models	373
4.1	Binary population interactions	373

4.2	The Ants' Garden	381
4.3	Towards the Millennium Development Goals	386
5	Assignments	390
5.1	Two and three populations	390
5.2	Deforestation and vegetation growth	390
5.3	Challenges with the population models	392
6	Evaluating QR models	392
7	Conclusion and discussion	394

Chapter 20

Models of flow pattern and mass distribution 399

R. Miranda & R. Neves

1	Introduction	399
2	Mohid overview	399
3	Finite volumes	400
4	Boundaries	400
5	Hydrodynamic model	400
5.1	Turbulence	401
6	Transport models	401
6.1	Lagrangian transport model	402
6.2	Eulerian transport model	403
7	Numerical modelling of water properties	403
7.1	Water quality model	404
8	Mohid's results	404
8.1	Tagus operational model	404
8.2	Sediment transport	405
9	Conclusions	405

Chapter 21

Applications of data mining in ecological modelling 409

M. Debeljak & S. Džeroski

1	Introduction	409
2	Data mining	410
2.1	Data	410
2.2	Patterns	411
2.3	Algorithms	412
3	Applications	415
3.1	Equations	415
3.2	Decision trees	417
3.3	Predictive rules for regression	420
4	Conclusions	421

Index 425
