<i>Preface</i>	<i>xv</i>

Part I Surface modification techniques

1	Surface modification of biomaterials by plasma polymerization	3
	E. J. SZILI, R. D. SHORT and D. A. STEELE, University of South Australia, Australia and J. W. BRADLEY, University of Liverpool, UK	
1.1	Introduction	3
1.2	An overview of plasma and plasma polymerization	4
1.3	Plasma generation and system design	4
1.4	Plasma parameters	8
1.5	Intrinsic parameters	13
1.6	Potential biomaterial applications	17
1.7	Future trends in plasma polymers	26
1.8	Sources of further information and advice	29
1.9	References	29
2	Surface modification of biomaterials by covalent binding of poly(ethylene glycol) (PEG)	39
	A. RHODES, S. S. SANDHU and S. J. ONIS, BioInteractions Ltd, UK	
2.1	Introduction	39
2.2	Principles and methods	40
2.3	Technologies and applications	51
2.4	Conclusions and future trends	52
2.5	References	54

vi	Contents	
3	Surface modification of biomaterials by heparinisation to improve blood compatibility	56
	X. ZHAO and J. M. COURTNEY, University of Strathclyde, UK	
3.1	Introduction	56
3.2	Bioactive molecule: heparin	58
3.3	Blood–biomaterial interaction	59
3.4	Surface modification by heparinisation for improved blood compatibility	62
3.5	Future trends in heparinisation of biomaterial surfaces	73
3.6	References	74
4	Surface modification of biomaterials by peptide functionalisation	78
	L. S. BIRCHALL, H. QU and R. V. ULIN, University of Strathclyde, UK	
4.1	Introduction	78
4.2	Peptides and peptide functionalisation of surfaces	78
4.3	Defining the biomaterial surface	81
4.4	Peptide functionalised surfaces	81
4.5	Non-covalent peptide functionalisation by self-assembly	88
4.6	Spatial control of peptide functionality	91
4.7	Conclusions	95
4.8	References	95
5	Metal surface oxidation and surface interactions	102
	L. DE NARDO, G. RAFFAINI, F. GANAZZOLI and R. CHIESA, Politecnico di Milano, Italy	
5.1	Surface oxides in metallic medical devices: the scenario	102
5.2	Titanium oxides on Ti implants: from crystallographic structure to the theoretical study of the atomistic surface structure and behaviour	105
5.3	Technologies for tailoring Ti oxides on titanium	121
5.4	Future trends	135
5.5	References	137
5.6	Appendix A: Materials and methods for unpublished results	141
5.7	Appendix B: Abbreviations and symbols	142
6	Surface modification of biomaterials by calcium phosphate deposition	143
	J. A. JUHASZ and S. M. BEST, University of Cambridge, UK	
6.1	Introduction	143
6.2	Basic methods and applications	144

6.3	Strengths and weaknesses	156
6.4	Future trends	157
6.5	Sources of further information and advice	158
6.6	References	159

7 Biomaterial surface topography to control cellular response: technologies, cell behaviour and biomedical applications 169

V. R. KEARNS, University of Liverpool, UK and

R. J. McMURRAY and M. J. DALBY, University of Glasgow, UK

7.1	Introduction	169
7.2	Defining micro and nano	170
7.3	Manufacturing surface topography	170
7.4	How surface topography affects cell behaviour	175
7.5	Technologies and potential applications	182
7.6	Tissue regeneration	186
7.7	Current issues and future trends	190
7.8	Acknowledgements	192
7.9	References	192

Part II Analytical techniques and applications

8 Techniques for analysing biomaterial surface chemistry 205

J. YANG and M. R. ALEXANDER, The University of Nottingham, UK

8.1	Introduction	205
8.2	X-ray photoelectron spectroscopy (XPS)	207
8.3	Time of flight secondary ion mass spectrometry (ToF SIMS)	219
8.4	Sample preparation and handling	227
8.5	Sources of further information and advice	228
8.6	Acknowledgements	229
8.7	References	229

9 Techniques for analyzing biomaterial surface structure, morphology and topography 232

N. S. MURTHY, Rutgers – The State University of New Jersey, USA

9.1	Introduction	232
9.2	Surface morphology and topography	233
9.3	Surface structure and spatial distribution	245

viii	Contents	
9.4	Energetics	248
9.5	Future trends	250
9.6	References	253
10	Modifying biomaterial surfaces to optimise interactions with blood	255
	A. DE MEL, Y. RAFIEI and B. G. COUSINS, University College London, UK and A. M. SEIFALIAN, University College London, UK and Royal Free Hampstead NHS Trust Hospital, UK	
10.1	Introduction	255
10.2	Physicochemical modification	263
10.3	Biofunctionalisation	268
10.4	Conclusions	271
10.5	References	273
11	Modifying biomaterial surfaces with bioactives to control infection	284
	H. J. GRIESSER, K. VASILEV, H. YS and S. A. AL-BATAINEH, University of South Australia, Australia	
11.1	Introduction	284
11.2	Plasma-based strategies for combating device-related infections	287
11.3	Plasma polymers with incorporated metal nanoparticles or ions	290
11.4	Covalent immobilisation of antibacterial molecules	294
11.5	Future trends	304
11.6	References	305
12	Modifying biomaterial surfaces to optimise interactions with soft tissues	309
	J. GOUGH, University of Manchester, UK	
12.1	Introduction	309
12.2	Surface modification of biomaterials for the liver	309
12.3	Surface modification of biomaterials for the kidney	312
12.4	Surface modification of biomaterials for tendons/ligaments	314
12.5	Surface modification of biomaterials for skeletal muscle	316
12.6	Surface modification of biomaterials for skin	319
12.7	Conclusions	321
12.8	Future trends	321
12.9	References	322

13	Modifying biomaterial surfaces for the repair and regeneration of nerve cells	325
	M. A. MATEOS-TIMONEDA, and J. A. PLANELL, The Institute for Bioengineering of Catalonia (IBEC), Spain and E. ENGEL, Technical University of Catalonia, Spain	
13.1	Introduction: the nervous system	325
13.2	Surface properties and their effect on neural cells	329
13.3	Future trends	334
13.4	References	338
14	Modifying biomaterial surfaces to control stem cell growth and differentiation	344
	K. H. SMITH, Plataforma de Nanotecnologia, Spain and J. W. HAYCOCK, University of Sheffield, UK	
14.1	Introduction	344
14.2	Surfaces for stem cell expansion	346
14.3	Surfaces for directing stem cell differentiation	350
14.4	Surfaces for maintaining the differentiated cell phenotype	356
14.5	Future trends	359
14.6	Acknowledgements	360
14.7	References	360
15	Modifying biomaterial surfaces to optimise interactions with bone	365
	R. L. SAMMONS, University of Birmingham, UK	
15.1	Introduction	365
15.2	Joint replacements: successes and challenges	368
15.3	Bone graft substitute materials: successes and challenges	375
15.4	Percutaneous bone-anchored devices	382
15.5	Summary and conclusions	390
15.6	Sources of further information and advice	391
15.7	References	391
