Chapter 1	An Introduction to Molecular Biology	1
	<i>Luce Dauphinot</i>	
	Abstract	1
	1.1 DNA Structure and Gene Expression	1
	1.2 Molecular Biology Tools for Nucleic Acid Studies	6
	1.2.1 DNA Engineering	6
	1.2.2 Polymerase Chain Reaction	7
	1.2.3 DNA Microarrays	10
	References	13
Chapter 2	The Central Dogma in Molecular Biology	15
	<i>Laili Mahmoudian</i>	
	Abstract	15
	2.1 Replication	15
	2.2 Transcription	17
	2.3 Translation	18
	2.4 Regulation of Gene Expression	18
	2.4.1 Transcriptional Control	19
	2.4.2 Post-transcriptional Modifications	21
	2.4.3 Translational Control	21
	2.4.4 Post-translational Control	22
	2.5 Limitations of the Central Dogma	23
	2.6 Single Cells and their Complexity	24
	References	24

RSC Nanoscience & Nanotechnology No. 15

Unravelling Single Cell Genomics: Micro and Nanotools

Edited by Nathalie Bontoux, Luce Dauphinot and Marie-Claude Potier

© Royal Society of Chemistry 2010

Published by the Royal Society of Chemistry, www.rsc.org

Chapter 3	From Unicellular to Multicellular Organisms: Tells from Evolution and from Development	26
	<i>Tania Vitalis</i>	
	Abstract	26
	3.1 Cells from Evolution	26
	3.2 Cells from Development	32
	References	35
Chapter 4	Understanding Cellular Differentiation	36
	<i>Tania Vitalis</i>	
	Abstract	36
	4.1 Development of the Cerebral Cortex	36
	4.2 Neuronal Differentiation	37
	4.3 Single Cell Analysis in Differentiation Processes	39
	References	43
Chapter 5	Realistic Models of Neurons Require Quantitative Information at the Single-cell Level	45
	<i>Nicolas Le Novère</i>	
	Abstract	45
	5.1 Introduction	45
	5.2 The Importance of Precise Neuronal Morphology	49
	5.3 Each Neuron has a Unique Neurochemistry	50
	5.4 Conclusions	51
	References	51
Chapter 6	Application to Cancerogenesis: Towards Targeted Cancer Therapies?	54
	<i>Bernhard Polzer and Christoph A. Klein</i>	
	Abstract	54
	6.1 Molecular Diagnosis in Cancer	54
	6.2 Detection and Malignant Origin of Disseminated Cancer Cells	55
	6.3 Genomic Studies of Single Disseminated Cancer Cells	57
	6.4 Oncogene Dependence and Tumor Suppressor Sensitivity in Metastasis Founder Cells	58
	References	60
Chapter 7	Capturing a Single Cell	61
	<i>Catherine Rey, Anne Wierinckx, Séverine Croze, Catherine Legras-Lachuer and Joel Lachuer</i>	
	Abstract	61
	7.1 Introduction	61

7.2	Overview of Cell Sorting Technologies	62
7.3	Laser Capture Microdissection Technologies	63
7.3.1	Infrared Laser Capture Systems	63
7.3.2	Ultraviolet Cutting Systems	66
7.4	Protocols Before Laser Microdissection (Tissue Sampling and Preparation)	66
7.4.1	Dissection from Fresh Frozen Tissue	67
7.4.2	Dissection from Formalin-fixed Paraffin-embedded Tissue	67
7.4.3	Immuno Laser Capture Microdissection	69
7.4.4	Other Cell-labeling Methods	70
7.5	Conclusion	70
	References	70

Chapter 8 Looking at the DNA of a Single Cell 73

Bernhard Polzer and Christoph A. Klein

	Abstract	73
8.1	Challenges of Single Cell DNA Amplification	73
8.2	Methods for Amplifying Genomic DNA of Single Cells	74
8.3	Array Comparative Genomic Hybridization of Single Cells	76
8.4	Combined Genome and Transcriptome Analysis of Single Cells	77
8.5	Perspective on Single Cell DNA Analysis	78
	References	78

Chapter 9 Gene Analysis of Single Cells 81

Bruno Cauli and Bertrand Lambolez

	Abstract	81
9.1	Single Cell RT-PCR After Patch Clamp	81
9.2	Correlating mRNA Expression and Functional Properties of Single Cells	83
9.3	Quantitative Analyses by scPCR	84
9.4	Molecular and Functional Phenotyping of Neuronal Types	84
9.5	Patch-clamp Harvesting of Single Cells	86
9.6	Sensitivity Limits	89
9.7	Controls	89
9.8	Interpretation of scPCR Results	90
	Conclusion	91
	Acknowledgement	91
	References	91

Chapter 10 Proteomics	93
<i>Anne-Marie Hesse and Joëlle Vinh</i>	
Abstract	93
10.1 Motivation to Study Proteins at the Single Cell Level	93
10.1.1 Proteins, mRNAs and DNA	94
10.1.2 Sample Preparation	95
10.1.3 Sub-proteome Analysis	96
10.2 Analytical Strategies	97
10.2.1 Mass Spectrometry	98
10.2.2 Coupling Separation Techniques and Mass Spectrometry	102
10.3 Strategies for Studying Proteins in Low Amounts of Samples	105
10.3.1 How to Enhance the Sensitivity: Miniaturization, Integration, and Automation	105
10.3.2 MALDI Interfaces	106
Conclusion	107
References	107
Chapter 11 Microfluidics: Basic Concepts and Microchip Fabrication	111
<i>Conni Vollrath and Petra S. Dittrich</i>	
Abstract	111
11.1 Size Matters: An Introduction	111
11.2 A Short Chronology of Microfluidics Research	113
11.3 Microfluidics: Some Basics	116
11.3.1 Flow Generation	117
11.3.2 Laminar Flow	119
11.3.3 Digital Microfluidics: Segmented Flow	123
11.4 Fabrication Techniques and Materials	125
11.4.1 Photolithography	125
11.4.2 Soft Lithography	128
11.4.3 Microchip Materials	131
11.4.4 From Fabrication to Application	141
11.5 Concluding Remarks	143
References	144
Chapter 12 Cell Capture and Lysis on a Chip	150
<i>Séverine Le Gac and Albert van den Berg</i>	
Abstract	150
12.1 Introduction	150
12.2 Cell Capture on a Chip	151
12.2.1 Mechanical Trapping	152

12.2.2	Electrical Trapping	155
12.2.3	Fluidic Trapping	157
12.2.4	Alternative Trapping Techniques	158
12.2.5	Conclusion on Cell Trapping	161
12.3	Cell Lysis in a Chip	163
12.3.1	Thermal Lysis	164
12.3.2	Chemical Lysis	165
12.3.3	"Alkaline" or Electrochemical Lysis	169
12.3.4	Electrical Lysis	171
12.3.5	Mechanical Lysis	174
12.3.6	Alternative Mechanical Lysis: Acoustic Lysis	176
12.3.7	Optical Lysis	176
12.3.8	Conclusion on Cell Lysis	179
12.4	Conclusion	179
	References	182

Chapter 13 DNA Analysis in Microfluidic Devices and their Application to Single Cell Analysis **185**

Yann Marcy and Angélique Le Bras

	Abstract	185
13.1	Amplification on a Chip	186
13.1.1	Polymerase Chain Reaction	186
13.1.2	Isothermal Techniques	189
13.2	DNA Analysis	190
13.2.1	Real-time PCR Detection	190
13.2.2	Capillary Electrophoresis	191
13.3	Why and When Smaller is Better	191
13.4	Applications of Microfluidic Single Cell Genetic Analysis in Microbial Ecology	192
13.5	Conclusion	193
	References	194

Chapter 14 Gene Expression Analysis on Microchips **196**

Max Chabert

	Abstract	196
14.1	Introduction	197
14.2	Multi-step Microfluidic RT-PCR	200
14.3	One-step Microfluidic RNA Analysis	202
14.4	Microfluidic cDNA Analysis	203
14.5	Single Cell RNA Analysis	205
14.6	Conclusion	206
	Acknowledgement	207
	References	207

Chapter 15 Analysis of Proteins at the Single Cell Level	209
<i>Séverine Le Gac</i>	
Abstract	209
15.1 Introduction	210
15.1.1 Protein Analysis: The Challenge	210
15.1.2 Why Microfluidics?	211
15.1.3 Microfluidics and Protein Analysis	212
15.2 Electrospray Ionization Mass Spectrometry	213
15.2.1 Connections and Coupling	214
15.2.2 Sample Processing: Purification and Digestion	215
15.2.3 Integrated Systems	220
15.3 MALDI-MS	221
15.3.1 Microfabricated MALDI Targets	222
15.3.2 Off-line Sample Preparation	222
15.3.3 Integrated Microsystems	224
15.4 Innovative Approaches for Protein Analysis at the Single Cell Level	225
15.4.1 Invasive Analysis	225
15.4.2 Partially Invasive Analysis	230
15.4.3 Non-invasive Analysis	234
15.5 Conclusion and Perspectives	238
References	238
 Chapter 16 A Concrete Case: A Microfluidic Device for Single Cell Whole Transcriptome Analysis	243
<i>Nathalie Bontoux, Luce Dauphinot and Marie-Claude Potier</i>	
Abstract	243
16.1 Introduction	244
16.2 Choice of Biological Protocol, Material and Fabrication Technique	245
16.2.1 Protocols for Single Cell Whole Transcriptome Analysis	245
16.2.2 Miniaturizing Reactions: Continuous Flows, Reaction Chambers or Droplet Micro-fluidic Reactions	245
16.2.3 Choosing the Microchip Material	246
16.2.4 Microchip Fabrication	246
16.3 Integrating Reverse Transcription on a Chip	248
16.3.1 Gene Expression Profiling of Single-Cell Scale Amounts of RNA	249
16.3.2 Gene Expression Profiling of Single Cells	251
16.4 Amplifying the Transcriptome on a Chip	252

16.5	Detecting the Transcriptome on a Chip	255
16.5.1	Microfluidics and Conventional Microarrays	255
16.5.2	Microarray Development Using DNA Immobilization onto Microchannels	256
16.5.3	Towards Transcriptome Analysis in the Liquid Phase	257
16.6	Some Practical Conclusions	258
	References	258

Chapter 17 Tiny Droplets for High-throughput Cell-based Assays **261**

J.-C. Baret and V. Taly

	Abstract	261
17.1	Introduction	262
17.2	Droplet-based Microfluidics	263
17.2.1	EWOD and "Digital Microfluidics": Tools for High-content Screening	263
17.2.2	Droplet-based Microfluidics: Tools for High-throughput Screening	265
17.3	Generating and Manipulating Droplets	265
17.3.1	Droplet Production	265
17.3.2	Droplet Division	267
17.3.3	Droplet Flow, Droplet Synchronization, and Droplet Incubation	267
17.3.4	Droplet Content Detection and Droplet Sorting	269
17.4	<i>In Vitro</i> Compartmentalization of Biological Reactions	270
17.4.1	Cell Compartmentalization in Aqueous Droplets	271
17.4.2	Incubation and Cell Viability in Droplets	271
17.4.3	Cell-based Assays and Cell Manipulation	272
17.5	Towards Integrated Platforms for Cell-based Assays	275
17.6	Conclusions	278
	References	279

Chapter 18 New Detection Methods for Single Cells **285**

Emmanuel Fort

	Abstract	285
18.1	Introduction	286
18.2	Bio-barcode Strategy	287
18.2.1	Principle	287
18.2.2	An Example: DNA Origami	287

18.3	Imaging Gene Expression in Living Cells	288
18.3.1	Motivations	288
18.3.2	Improvements in Photonic Microscopy	288
18.3.3	Improvements in Fluorophore Design	290
18.4	Quantum Dots-based Techniques	293
18.4.1	Quantum Dots Bead-based Assays	294
18.4.2	Single Quantum Dots-based DNA Nanosensors	294
18.4.3	Quantum Dots for Super-resolution Microscopy	295
18.5	Gold Nanoparticle-based Detection Methods	295
18.5.1	Resonant Light Scattering Detection	298
18.5.2	Molecular Beacons with Gold Nanoparticles	298
18.5.3	Molecular Plasmonic Rulers	299
18.5.4	Surface-enhanced Raman Scattering Detection	300
18.6	Electrochemical Sensors	303
18.7	Concluding Remarks	304
	References	304
