Chapter 1	Experimental and Computational Studies on the Catalytic Mechanism of Non-heme Iron Dioxygenases	1
	<i>Sam P. de Visser</i>	
1.1	Introduction	1
1.2	α -Ketoglutarate Dependent Dioxygenases (α KDD) and Halogenases (α KDH)	3
1.2.1	Taurine/ α -Ketoglutarate Dioxygenase (TauD)	4
1.2.2	AlkB Repair Enzymes	10
1.2.3	Prolyl-4-hydroxylase (P4H)	10
1.2.4	α -Ketoglutarate Dependent Halogenases (α KDH)	17
1.3	Cysteine Dioxygenase (CDO)	21
1.4	Isopenicillin N Synthase (IPNS)	27
1.5	1-Aminocyclopropane-1-carboxylic Acid Oxidase (ACCO)	30
1.6	Rieske Dioxygenases	32
1.7	Extradiol and Intradiol Dioxygenases	34
1.8	Conclusion	35
	References	36
Chapter 2	Non-heme Iron-Dependent Dioxygenases: Mechanism and Structure	42
	<i>Timothy D. H. Bugg</i>	
2.1	Introduction	42
2.2	Dioxygenases Catalysing Oxidative C–C Cleavage Reactions	43

Iron-Containing Enzymes: Versatile Catalysts of Hydroxylation Reactions in Nature

Edited by Sam P de Visser and Devesh Kumar

© Royal Society of Chemistry 2011

Published by the Royal Society of Chemistry, www.rsc.org

2.2.1	Intradiol Catechol Dioxygenases	43
2.2.2	Extradiol Catechol Dioxygenases	46
2.2.3	Carotenoid Cleavage Dioxygenases	49
2.2.4	Oxidative Cleavage of Aliphatic Substrates	50
2.3	Dioxygenases Catalysing Formation of Peroxides: Lipxygenases	55
2.4	Dioxygenases Catalysing Hydroxylation Reactions	57
2.4.1	α -Ketoglutarate-Dependent Dioxygenases	57
2.4.2	Arene (Rieske) Dioxygenases	59
2.5	Conclusion and Summary	62
	References	63
Chapter 3	Transient Iron Species in the Catalytic Mechanism of the Archetypal α-Ketoglutarate-Dependent Dioxygenase, TauD	67
	<i>Denis A. Proshlyakov and Robert P. Hausinger</i>	
3.1	Introduction	67
3.2	Structure of the TauD Active Site	68
3.2.1	Metal Binding to TauD Apoprotein	69
3.2.2	Substrate Binding to TauD	70
3.2.3	Characterization of the NO-Bound Quaternary Complex	71
3.3	The Fe(IV)-oxo Species	72
3.3.1	Experimental Detection of Fe(IV)-oxo	72
3.3.2	Electronic Configuration of the Fe(IV)-oxo Species	74
3.3.3	Hydrogen Atom Abstraction by Fe(IV)-oxo	76
3.3.4	Thermodynamics of Hydrogen Atom Abstraction by Fe(IV)-oxo	77
3.4	Fe(III)-O(H) Species and Oxygen Transfer	80
3.5	Conclusions	83
	Acknowledgements	84
	References	84
Chapter 4	Density Functional Theory Studies on Non-heme Iron Enzymes	88
	<i>Tomasz Borowski and Per E. M. Siegbahn</i>	
4.1	Introduction	88
4.1.1	Reactions Catalysed by Non-heme Iron Enzymes and their Biological Significance	89
4.1.2	Iron Binding Sites	91
4.2	Computational Methods	93
4.3	Dioxygen Binding and Generation of Peroxo Intermediates	94

4.3.1	O ₂ Binding with Oxidation of Fe(II)	94
4.3.2	O ₂ Binding with Oxidation of the Organic Substrate	96
4.3.3	O ₂ Binding with Oxidation of External Reductants	98
4.4	Strategies for O–O Bond Cleavage	98
4.4.1	Heterolytic O–O Bond Cleavage Leading to Fe(IV)=O	99
4.4.2	Homolytic O–O Bond Cleavage Leading to R–O•	101
4.4.3	Heterolytic O–O Bond Cleavage in Fe(III)–OOH	103
4.5	Reactions of the High-Valent Intermediates	104
4.5.1	Oxygenation by Fe(IV)=O	104
4.5.2	Oxidation by Fe(IV)=O	107
4.5.3	Reactions of R–O•	110
4.6	Origins of Chemoselectivity – The Role of Negative Catalysis	112
4.7	Conclusions	114
	References	114
Chapter 5	Theoretical Spectroscopies of Iron-Containing Enzymes and Biomimetics	119
	<i>Shengfa Ye, Gemma J. Christian, Caiyun Geng and Frank Neese</i>	
5.1	Introduction	119
5.2	Mössbauer Spectroscopy	120
5.2.1	Theoretical Prediction of Mössbauer Parameters	121
5.2.2	Examples from the Literature	123
5.3	Nuclear Resonance Vibrational Spectroscopy	125
5.3.1	Examples from the Literature	126
5.4	Electron Paramagnetic Resonance	127
5.4.1	Theoretical EPR Spectroscopy	127
5.4.2	Examples from the Literature	130
5.5	Absorption Spectroscopy	133
5.5.1	Theoretical Prediction of Absorption Spectroscopy	133
5.5.2	Examples from the Literature	134
5.6	X-Ray Spectroscopy	136
5.6.1	Theoretical Prediction of Metal and Ligand K-Edge Spectra	137
5.6.2	Examples from the Literature	138
5.7	Conclusion	139
	References	140

Chapter 6	Bioinspired Non-heme Iron Catalysts in C–H and C=C Oxidation Reactions	148
	<i>Anna Company, Laura Gómez and Miquel Costas</i>	
6.1	Biological Precedents	148
6.1.1	Oxidative Iron Proteins	149
6.1.2	Cytochrome P450	150
6.1.3	Rieske Dioxygenases	151
6.2	Non-heme Iron Complexes as Bioinspired Catalysts	154
6.2.1	Oxidation of Alkanes (C–H Bonds) by Non-heme Iron Complexes	155
6.2.2	Oxidation of Alkenes (C=C Double Bonds) by Non-heme Iron Complexes	175
6.3	Reaction Mechanisms in Catalytic C–H and C=C Oxidation Reactions Mediated by Complexes with N-Rich Ligands	187
6.3.1	The Initially Formed Fe ^{III} -OOH and its Cleavage Products	187
6.3.2	Olefin Oxidations: Epoxidation and <i>cis</i> -Dihydroxylation	189
6.3.3	Alkane Oxidations	198
6.4	Conclusions	201
	References	202
Chapter 7	Application of Magnetic Circular Dichroism, X-Ray Absorption Spectroscopy and Extended X-Ray Absorption Fine Structure in Determining Geometric and Electronic Structure of Non-heme Iron(IV)-oxo Enzymatic Intermediates and Related Synthetic Models	209
	<i>Somdatta Ghosh Dey and Abhishek Dey</i>	
7.1	Introduction	209
7.1.1	Magnetic Circular Dichroism (MCD)	212
7.1.2	X-Ray Absorption Spectroscopy and Extended X-Ray Absorption Fine Structure	223
7.2	MCD of Iron(IV)-oxo Complexes	226
7.2.1	[Fe ^{IV} =O(TMC)(NCCH ₃)] ²⁺	226
7.2.2	Iron(IV)-oxo MCD: Varying Axial and Equatorial Ligands	230
7.2.3	Vibronic Progression in MCD	233
7.3	XAS and EXAFS of Iron(IV)-oxo Intermediates and Synthetic Model Complexes	236
7.3.1	Enzymatic Catalytic Cycle Intermediates	236
7.3.2	Model Complexes	245

7.4 Parting Thoughts	250
References	251
Chapter 8 Structure, Mechanism and Function of Cytochrome P450 Enzymes	255
<i>Kirsty J. McLean, Hazel M. Girvan, Amy E. Mason, Adrian J. Dunford and Andrew W. Munro</i>	
8.1 Introduction	255
8.2 Cytochromes P450 – A Brief History	256
8.3 Optical and Spectroscopic Features	257
8.4 Cytochrome P450 Catalytic Cycle	260
8.5 Biological Diversity	263
8.6 Cytochrome P450 Redox Partner Systems	264
8.7 Cytochrome P450 Structure	267
8.8 Physiological Roles of Cytochromes P450	269
8.9 Cytochrome P450 Medicine and Biotechnology	272
8.10 Conclusions and Future Prospects	275
References	275
Chapter 9 Drug Metabolism by Cytochrome P450: A Tale of Multistate Reactivity	281
<i>Devesh Kumar</i>	
9.1 Introduction	281
9.2 Nomenclature of Cytochrome P450 Enzymes	282
9.3 Types of Drug Interactions	283
9.3.1 Induction	283
9.3.2 Inhibition	285
9.4 Important Isoforms of Human CYP	285
9.4.1 CYP1A2 Isoform	285
9.4.2 CYP2C8, CYP2C9 and CYP2C19 Isoforms	287
9.4.3 CYP2D6 Isoform	287
9.4.4 CYP3A4 Isoform	287
9.5 Examples of Generation of Various Metabolites from a Single CYP 450	288
9.6 CYP 450 Structure	290
9.7 Catalytic Cycle of CYP 450	291
9.8 Compound I of CYP 450: The Active Species	292
9.8.1 Axial Ligand Effect of Compound I	295
9.9 Reactivity of Compound I	301
9.10 Aliphatic C–H Hydroxylation by Compound I of CYP 450	303
9.10.1 Rearrangement Mechanisms of Aliphatic Hydroxylation Reactions	308
9.11 C=C Epoxidation by Compound I of CYP 450	312

9.12	Sulfoxidation Reaction by Compound I of CYP 450	315
9.13	Aromatic Hydroxylation Reaction by Compound I of CYP 450	317
9.14	Role of Water Molecule as Biocatalyst	319
9.15	Conclusion	321
	Acknowledgements	321

Chapter 12	Mechanism and Function of Tryptophan and Indoleamine Dioxygenases	400
	<i>Sarah J. Thackray, Igor Efimov, Emma Lloyd Raven and Christopher G. Mowat</i>	
12.1	Introduction	400
12.2	Biological and Physiological Function of Indoleamine Dioxygenase and Tryptophan Dioxygenase	401
12.3	Structures of TDO and IDO	404
12.3.1	Comparison of Overall Structure	404
12.3.2	Active Site Environments	406
12.4	Turnover and Inhibition	408
12.4.1	Steady State Kinetics	408
12.4.2	Inhibition of TDO and IDO	410
12.5	Catalytic Cycle	411
12.5.1	Formation of the Active Ternary Complex	411
12.5.2	Electrochemical Control of Substrate Reactivity	413
12.5.3	Heme Coordination Environment	414
12.5.4	Mechanism of Oxygen Insertion	418
12.6	Summary and Conclusions	421
