Preface XI

List of Contributors XIII

1	Simple Molecules, Highly Efficient Amination	1
	<i>Shunsuke Chiba and Koichi Narasaka</i>	
1.1	Introduction	1
1.2	Hydroxylamine Derivatives	1
1.2.1	O-Sulfonylhydroxylamine	1
1.2.2	O-Phosphinylhydroxylamine	4
1.2.3	O-Acylhydroxylamine	5
1.2.4	O-Trimethylsilylhydroxylamine	6
1.2.5	Experimental Procedures	7
1.3	Oxime Derivatives	9
1.3.1	Synthesis of Primary Amines by Electrophilic Amination of Carbanions	9
1.3.2	Experimental Procedures	13
1.4	Azo Compounds	15
1.4.1	Azodicarboxylates	15
1.4.1.1	Allylic Amination through Ene-Type Reactions	15
1.4.1.2	Hydrohydrazination of Alkenes	16
1.4.2	Arylazo Sulfones	19
1.4.3	Experimental Procedures	20
1.5	Oxaziridine Derivatives	23
1.5.1	Electrophilic Amination of Carbon Nucleophiles	23
1.5.2	Amination of Allylic and Propargylic Sulfides by Use of a Ketomalonate-Derived Oxaziridine	23
1.5.3	Experimental Procedures	25
1.6	Chloramine-T	26
1.6.1	Aminochalcogenation of Alkenes	26
1.6.2	Aminohydroxylation of Alkenes	26
1.6.3	Aziridination of Alkenes	27
1.6.4	Other Applications	32
1.6.5	Experimental Procedures	34
