Foreword: The Enigma of Morphogenesis – A Personal View VII

Preface XXIII

List of Contributors XXV

- 1 **Growth and Form: What is the Aim of Biomineralization?** 1
Edmund Bäuerlein
 - Abstract 1
 - 1.1 Introduction 1
 - 1.2 Notions of D'Arcy Thompson on Deposition of Inorganic Material in Cells 2
 - 1.3 Close to the Beginning of Biomineralization 3
 - 1.3.1 Prebiotic Synthesis of Peptides 3
 - 1.3.2 Selected Binding of Phage(Virus)-Displayed Peptides to Inorganic Materials 3
 - 1.3.3 Synthesis of Inorganic Material by Selected Peptides 3
 - 1.3.4 Selected Sequences with Various Functional Groups 6
 - 1.3.5 Summary and Conclusion 7
 - 1.4 Nucleation of Inorganic Crystals and Inorganic Amorphous/Porous Forms on Peptides 7
 - 1.4.1 Porous Silica Spheres Synthesized by 12-Amino Acid Peptides Targets 7
 - 1.4.2 An Amorphous CaCO_3 Core and a Crystalline CaCO_3 Envelope, Separated by an Organic Layer, Coexist on an Ascidian Skeleton 8
 - 1.4.3 The Proteomic Analysis of the Chicken Calcified Eggshell Layer 8
 - 1.4.4 Synthesis of Nanocrystalline Hydroxyapatite with a Crystalline Core and a Disordered Surface Region 9
 - 1.4.5 One Iron Atom in Archaeal Ferritin Crystals as Seed for an Iron-Oxide Cluster 9
 - 1.4.6 Directional Freezing of Aqueous Ceramic Suspensions to Shape Complex Composites 9
 - 1.4.7 Ways to Porous Structures 10

- 1.5 Bacterial Filaments in the Advent of Biomineralization: Cytoskeleton-Like Proteins and Exopolysaccharides 11
 - 1.5.1 Proteins Responsible for the Alignment of Magnetosomes in Magnetotactic Bacteria 11
 - 1.5.1.1 Actin-Like Filaments in Magnetotactic Bacteria 11
 - 1.5.1.2 Actin Filaments in Morphogenesis of Diatoms, Eukaryotic Unicellular Organisms 12
 - 1.5.1.3 Renaissance of the "Grand Unified Theory?" 12
 - 1.5.2 Filaments of Bacterial Acidic Polysaccharides as Matrices for Iron Oxide Crystals 13
 - 1.5.2.1 Bacterial Iron Oxide Precipitations 13
 - 1.5.2.2 Bacterial Core Strands of Acidic Exopolysaccharides Template Assembly of FeOOH Nanocrystal Fibers 13
 - 1.5.2.3 Acidic Polysaccharides Mediating Formation of Complex Calcite (CaCO_3) Crystals in *Pleurochrysis carterae*, a Unicellular, Eukaryotic Organism 14
 - 1.5.2.4 Polysaccharides or Peptides: Is There a "Unified Theory"? 14
- 1.6 Proteins of Similar Function and/or Structure, but Low Sequence Homology: Typical in Biomineralization 15
 - 1.6.1 The Avian Eggshell Protein Ovocleidin-17, and Human Pancreatic Stone Protein 15
 - 1.6.2 The Starmaker Protein of Zebrafish and Human Dentin Sialophosphoprotein (DSPP) 16
- 1.7 Composites: Inorganic–Organic Hybrid Materials 16
- 1.8 Finite Element Analysis and Conclusion 18
- References 19

1 Silica-Hydrated Polysilicondioxide 21

2 Collagen: A Huge Matrix in Glass Sponge Flexible Spicules of the Meter-Long *Hyalonema sieboldi* 23

Hermann Ehrlich and Hartmut Worch

Abstract 23

- 2.1 Introduction 23
- 2.2 A Modern Approach to Desilicification of Spicules in Glass Sponges 25
- 2.3 Glass Sponge Collagen 26
 - 2.3.1 Chemical Etching of Spicules and Extraction of Collagen 26
 - 2.3.2 Collagen Identification 27
 - 2.3.3 Nanoimager of Fibrillar Organic Matrix 29
- 2.4 Collagen as a Unified Template for Biomineralization 30
 - 2.4.1 Evolutionary Aspects 30
 - 2.4.2 Twisted Plywood Architecture of Collagen Fibrils in Basal Spicules of *H. sieboldi* 32

2.4.3	A New View on the Possible Role of Silica in Bone Mineralization	33
2.5	Collagen–Silica-Based Biomaterials	35
2.5.1	Bioactive Glass Composites	35
2.5.2	Collagen–Silica-Based Biohybrids	36
2.6	Open Questions	37
	References	38

3 Biochemistry and Molecular Genetics of Silica Biomineralization in Diatoms 43

Nils Kröger and Nicole Poulsen

Abstract 43

3.1	Introduction	43
3.2	The Cell Biology of Diatom Silica Formation	45
3.3	<i>Thalassiosira pseudonana</i> as a Model Organism	47
3.3.1	Genome Analysis	47
3.3.2	Silaffins and Long-Chain Polyamines from <i>T. pseudonana</i>	48
3.3.2.1	Silaffins	49
3.3.2.2	LCPAs	51
3.3.3	Silica Formation by Silaffins and LCPAs	52
3.3.4	Molecular Genetic Manipulation	54
	References	57

4 Formation of Siliceous Spicules in Demosponges: Example *Suberites domuncula* 59

Werner E. G. Müller, Xiaohong Wang, Sergey I. Belikov, Wolfgang Tremel, Ute Schloßmacher, Antonino Natoli, David Brandt, Alexandra Boreiko, Muhammad Nawaz Tahir, Isabel M. Müller, and Heinz C. Schröder

Abstract 59

4.1	Introduction	59
4.2	Early Descriptions	63
4.3	Structural Features of the Sponge Body Plan	64
4.4	Cells Involved in Spicule Formation	65
4.5	Anabolic Enzyme for the Synthesis of Silica: Silicatein	67
4.6	Silicatein-Associated Proteins	72
4.7	Catabolic Enzyme: Silicase	73
4.8	Morphology and Synthesis of Spicules in <i>S. domuncula</i>	73
4.9	Formation of Spicule Morphology	74
4.10	Phases of Silica Deposition during Spicule Formation	76
4.10.1	The Intracellular Phase in the Sclerocytes	76
4.10.2	The Extracellular Phase: Appositional Growth	76
4.10.3	The Extracellular Phase: Shaping	78
4.11	Final Remarks	79
	References	80

5	Interactions between Biomineralization and Function of Diatom Frustules	83
	<i>Christian Hamm</i>	
	Abstract	83
5.1	Introduction	83
5.2	Approaches to Study Biominerals	85
5.3	Evolution and Diatom Shells	89
5.4	Biomechanics and Diatoms	90
5.5	The Effect of Evolutionary Feedback on Biomineralization	91
5.6	Conclusions	92
	References	93
6	The Evolution of the Diatoms	95
	<i>Wiebe H. C. F. Kooistra</i>	
	Abstract	95
6.1	Introduction	95
6.2	The Silica Cell Walls of the Diatoms	96
6.2.1	The Frustule	96
6.2.2	Frustule Construction	99
6.2.3	Sexual Reproduction and Auxospore Formation	100
6.2.4	Resting Stages	102
6.3	Phylogenies	102
6.3.1	The Heterokont Relatives of the Diatoms	102
6.3.2	The Phylogeny of the Diatoms	103
6.4	The Diatom Fossil Record	105
6.5	The Origin and Evolution of the Diatom Frustule	107
6.6	Paleo-Ecology and Diatom Evolution	108
	References	109
7	Uptake of Silicon in Different Plant Species	113
	<i>Jian Feng Ma</i>	
	Abstract	113
7.1	Silicon in Plants	113
7.2	Beneficial Effects of Silicon on Plant Growth	115
7.2.1	Disease Control	115
7.2.2	Alleviation of Stress	115
7.2.3	Plant Growth	116
7.3	Uptake Systems of Si in Different Plant Species	116
7.4	Genes Involved in Si Uptake	120
	References	123

II	Iron Sulfides and Oxides	125
8	Magnetic Microstructure of Magnetotactic Bacteria	127
	<i>Richard B. Frankel, Rafal E. Dunin-Borkowski, Mihály Pósfai, and Dennis A. Bazylinski</i>	
	Abstract	127
8.1	Introduction	127
8.1.1	Magnetotactic Bacteria	127
8.1.2	Magnetosomes	128
8.1.3	Magnetite Magnetosomes	129
8.1.4	Greigite Magnetosomes	131
8.1.5	Magnetic Properties of Magnetosomes	132
8.1.6	Cellular Magnetic Dipole	133
8.2	Experimental Measurements of the Magnetic Microstructure of Magnetosomes	133
8.2.1	Off-Axis Electron Holography: An Overview	134
8.2.2	Off-Axis Electron Holography of Magnetite Magnetosome Chains	135
8.2.3	Off-Axis Electron Holography of Greigite Magnetosome Chains	138
8.3	Conclusions	141
	References	142
9	Genetic and Biochemical Analysis of Magnetosome Formation in <i>Magnetospirillum gryphiswaldense</i>	145
	<i>Christian Jogler and Dirk Schüller</i>	
	Abstract	145
9.1	Introduction	145
9.2	Genetics of Magnetosome Formation	146
9.2.1	Genomic Organization of Magnetosome Genes	146
9.2.2	Genes Encoding Magnetosome-Associated Proteins are Co-Transcribed within the <i>mam</i> - and <i>mms</i> -Operons	150
9.2.3	The Magnetosome Island is a Highly Unstable Genomic Region and Undergoes Spontaneous Rearrangements	150
9.3	Magnetosome-Associated Proteins	151
9.3.1	Biochemical Characterization of the Magnetosome Membrane	151
9.3.1.1	TPR Proteins (MamA)	153
9.3.1.2	CDF Proteins	153
9.3.1.3	HtrA-like Serine Proteases	156
9.3.1.4	MMPs with Unknown Function	156
9.3.2	MamJ and MamK Control Subcellular Organization and Assembly of Magnetosomes Chains	157
9.4	Mechanism of Magnetosome Formation and Magnetite Biomineralization	158
	References	160

10	Physical and Chemical Principles of Magnetosensation in Biology	163
	<i>Michael Winklhofer and Thorsten Ritz</i>	
	Abstract	163
10.1	Introduction	163
10.2	A Biochemical Compass Mechanism	164
10.2.1	Magnetic Field Effects on Radical-Pair Reactions	164
10.2.2	A Hypothetical Radical-Pair Based Compass	165
10.2.3	Evidence for a Radical-Pair Mechanism in Migratory Birds	166
10.3	Biogenic Magnetite as a Basis of Magnetoreception	167
10.3.1	Pitfalls with the Magnetite Hypothesis	168
10.3.2	Magnetite-Based Magnetoreceptors	169
10.3.3	Hypothetical Transduction Mechanisms	171
10.3.4	Testing the Magnetite Hypothesis with Pulse Experiments	172
10.3.5	Biomineralization of Magnetite in Vertebrates	173
10.3.6	Non-Destructive Techniques Used to Detect Magnetite in Tissue	174
10.3.6.1	SQUID Measurements	174
10.3.6.2	X-Ray Fluorescence (XRF) and X-Ray Absorption Spectroscopy (XAS)	175
10.3.6.3	Ferromagnetic Resonance (FMR) Spectroscopy	175
10.3.6.4	Nuclear Magnetic Resonance (NMR) Relaxometry	176
10.4	Conclusions	176
	References	177
