Introduction 1

Part One Basic Methods in Biophysical Chemistry 13

1 Basic Optical Principles 15

1.1 Introduction 15

1.2 What Does the Electronic Structure of Molecules Look Like? Orbitals, Wave Functions and Bonding Interactions 16

1.3 How Does Light Interact with Molecules? Transition Densities and the Transition Dipole Moment 22

1.4 Absorption Spectra of Molecules in Liquid Environments. Vibrational Excitation and the Franck–Condon Principle 26

1.5 What Happens After Molecules have Absorbed Light? Fluorescence, Non-Radiative Transitions and the Triplet State 29

1.6 Quantitative Description of all Processes: Quantum Efficiencies, Kinetics of Excited State Populations and the Jablonski Diagram 34 Bibliography 40

2 Optical Properties of Biomolecules 41

2.1 Introduction 41

2.2 Experimental Determination of Absorption and Fluorescence Spectra 41

2.3 Optical Properties of Proteins and DNA 45

2.3.1 Intrinsic Absorption and Fluorescence of Amino Acids, Peptides and Proteins 45

2.3.2 Intrinsic Absorption of Nucleotides, DNA and RNA 47

2.4 Optical Properties of Important Cofactors 49

2.4.1 Haem 49

2.4.2 Nicotinamide Adenine Dinucleotides 52

2.4.3 Flavins 53

2.4.4 Chlorophylls 54

2.4.5	Carotenoids	56
	Bibliography	58
3	Basic Fluorescence Techniques	61
3.1	Introduction	61
3.2	Fluorescent Labelling and Linking Techniques	61
3.2.1	Primary Amino Group Reactive Labels	63
3.2.2	Thiol Group Reactive Labels	64
3.2.3	Avidin-Biotin Techniques	65
3.2.4	His-Tag	66
3.2.5	Thiolinkers and Gold Surfaces	67
3.2.6	Fluorescent Proteins	67
3.3	Fluorescence Detection Techniques	67
3.4	Fluorescence Polarization Anisotropy	70
3.4.1	Principles and Theoretical Background	70
3.4.2	Application Example: Receptor-Ligand Interactions	77
3.4.3	Application Example: Estimation of Molecular Mass	78
3.4.4	Application Example: Enzyme Function and Kinetics	79
3.4.5	Application Example: Enzyme Inhibition, Activation and Regulation	82
3.5	Förster Resonance Energy Transfer	84
3.5.1	Principles and Theoretical Background	84
3.5.2	Application Examples	89
3.6	Fluorescence Kinetics	91
3.7	Fluorescence Recovery after Photobleaching	95
3.8	Biochemiluminescence	96
	Bibliography	100
4	Chiroptical and Scattering Methods	103
4.1	Chiroptical Methods	103
4.1.1	Circular Dichroism (CD)	103
4.1.2	Optical Rotatory Dispersion	105
4.2	Light Scattering	107
4.2.1	Scattering of Light at Molecules Smaller than the Optical Wavelength	108
4.2.2	Scattering of Light at Particles Equal to or Larger than the Optical Wavelength	110
4.2.3	Dynamic Light Scattering	113
4.3	Vibrational Spectra of Biomolecules	113
	Bibliography	117
5	Magnetic Resonance Techniques	119
5.1	Nuclear Magnetic Resonance of Biomolecules	119
5.1.1	Principles	119
5.1.2	Theoretical Framework	121

5.1.3	Primary Information Deduced from NMR Spectra	123
5.1.4	Pulsed NMR Spectroscopy	124
5.1.5	Two-Dimensional NMR Spectroscopy	128
5.1.6	Correlated Spectroscopy (COSY)	128
5.1.7	Nuclear Overhauser Effect and NOESY Spectra	133
5.1.8	NMR-Based Structural Analysis of Biomolecules	135
5.2	Electron Paramagnetic Resonance	139
	Bibliography	144

6	Mass Spectrometry	147
6.1	Introduction	147
6.2	MALDI-TOF	147
6.2.1	Ionization	147
6.2.2	Analyser	150
6.2.3	Detector	152
6.2.4	Signals and Signal Improvements	152
6.3	ESI-MS	154
6.3.1	Ionization	154
6.3.2	Analyser and Detection	156
6.3.3	Signals and Signal Improvements	159
6.4	Structural and Sequence Analysis Using Mass Spectrometry	162
	Bibliography	164

Part Two Advanced Methods in Biophysical Chemistry 165

7	Fluorescence Microscopy	167
7.1	Introduction	167
7.2	Conventional Fluorescence Microscopy	167
7.2.1	Confocal Fluorescence Microscopy	167
7.2.2	Laser Scanning Microscopy	171
7.2.3	Wide-Field Fluorescence Microscopy	172
7.3	Total Internal Reflection Fluorescence Microscopy	173
7.4	High-Resolution Fluorescence Microscopy	175
7.4.1	Stimulated Emission Depletion (STED) Microscopy	175
7.4.2	Photo-Activated Localization Microscopy (PALM)	178
	Bibliography	181
8	Single-Biomolecule Techniques	183
8.1	Introduction	183
8.2	Optical Single-Molecule Detection	183
8.2.1	Application Example 1: Observation of the Rotation of Single ATPase Complexes	186
8.2.2	Application Example 2: Single-Molecule Observation of the Elementary Steps of Biomolecular Motors	189
8.3	Fluorescence Correlation Spectroscopy	193

8.3.1	Autocorrelation Analysis and Observable Key Parameters	194
8.3.2	Autocorrelation Analysis, Mathematical Background	199
8.3.3	Quantitative Determination of Important Parameters from Autocorrelation Curves	201
8.3.3.1	Relationship Between Volume and Molecular Mass of a Protein and its Diffusion Time	201
8.3.3.2	Two-Dimensional Diffusion and Active Transport	202
8.3.3.3	Mixtures of Fluorescing Particles	203
8.3.4	Further Correlation Effects	203
8.3.5	Cross-Correlation Analysis	205
8.4	Optical Tweezers	209
8.4.1	Theoretical Background	210
8.4.2	Application Examples	216
8.4.2.1	Unfolding of RNA and DNA Hairpins	216
8.4.2.2	RNA Polymerase	217
8.4.2.3	DNA Polymerase	219
8.5	Atomic Force Microscopy of Biomolecules	220
8.5.1	Principle of an AFM	220
8.5.2	Application Examples	221
8.5.2.1	Unfolding of DNA Hairpins	221
8.5.2.2	Receptor-Ligand Binding Forces	223
8.5.2.3	Protein Unfolding	223
8.6	Patch Clamping	224
8.6.1	Ion Channels	224
8.6.2	Patch Clamp Configurations	226
	Bibliography	232
9	Ultrafast- and Nonlinear Spectroscopy	237
9.1	Introduction	237
9.2	Nonlinear Microscopy and Spectroscopy	238
9.2.1	Multi-Photon Excitation	238
9.2.2	Advantages and Disadvantages of Two-Photon Excitation in Fluorescence Microscopy	239
9.2.3	How are Nonlinear Optical Signals Observed From Biological Samples?	242
9.2.4	Further Distinct Properties and Advantages of Two-Photon Excitation	243
9.2.5	Wavemixing and Other Nonlinear Optical Techniques	245
9.3	Ultrafast Spectroscopy	249
9.3.1	Pump-Probe Spectroscopy	249
9.3.2	Application Example: Ultrafast Light-Harvesting and Energy Conversion in Photosynthesis	253
9.3.2.1	Chlorophyll b $\rightarrow$ Chlorophyll a $\rightarrow$ Reaction Centre Energy Flow	255
9.3.2.2	Carotenoid $\rightarrow$ Chlorophyll Energy Flow	257
	Bibliography	261

10	Special Techniques	265
10.1	Introduction	265
10.2	Fluorescing Nanoparticles	265
10.3	Surface Plasmon Resonance Detection	270
10.4	DNA Sequencing	272
10.5	DNA Microarrays	273
10.6	Flow Cytometry	276
10.7	Fluorescence <i>In Situ</i> Hybridization	277
10.8	Microspheres and Nanospheres	278
	Bibliography	280
11	Assay Development, Readers and High-Throughput Screening	281
11.1	Introduction	281
11.2	Assay Development and Assay Quality	281
11.3	Microtitre Plates and Fluorescence Readers	284
11.4	Application Example: Drug Discovery and High-Throughput Screening	289
	Bibliography	294
	Index	297
