Preface *XIII*

List of Contributors *XV*

1	Origin, Current Status, and Future Perspectives of Chemical Cytometry	1
	<i>Norman J. Dovichi</i>	
1.1	The Cell and Cytometry	1
1.2	Flow and Image Cytometry	1
1.3	Chemical Cytometry	2
1.3.1	Prehistory of Chemical Cytometry – Microchemistry, Microspectroscopy, and Microseparations	3
1.3.2	Early History of Chemical Cytometry – Before Ultrasensitive Detection	4
1.3.3	Prehistory of Chemical Cytometry – The Origins of Capillary-based Separations	5
1.3.4	Prehistory of Chemical Cytometry – The Origins of Ultrasensitive Detection	6
1.3.5	Prehistory of Chemical Cytometry – The Polymerase Chain Reaction and Fluorescence-based DNA Sequencing	6
1.3.6	Chemical Cytometry: Protein Analysis – The First Experiments	7
1.3.7	Chemical Cytometry: Protein Analysis – Cell Lysis	7
1.3.8	Chemical Cytometry: Protein Analysis – Native Fluorescence	8
1.3.9	Chemical Cytometry: Protein Analysis – On-column Labeling	9
1.3.10	Chemical Cytometry: Protein Analysis – Two-dimensional Capillary Electrophoresis	10
1.4	Chemical Cytometry of DNA and mRNA	10
1.5	Metabolic Cytometry	10
1.5.1	Directed Metabolic Cytometry	11
1.5.2	Shotgun Metabolic Cytometry	11
1.6	Future Perspectives on Instrumentation for Chemical Cytometry	12
1.6.1	Chemical Cytometry of Primary Cells Is the Wave of the Future	12

1.6.2	Challenges – Tissue Dissociation Can Introduce Changes in a Cell's Composition	12
1.6.3	Challenges – Cells Need to Be Fixed to Prevent Changes Associated with Sample Handling	13
1.6.4	Challenges – The Connection Between the Real World and the World of Chemical Cytometry	13
	Acknowledgments	14
	References	14
2	Metabolic Cytometry – The Study of Glycosphingolipid Metabolism in Single Primary Cells of the Dorsal Root Ganglia	21
	<i>Colin D. Whitmore, Jillian Prendergast, David Essaka, Ole Hindgaul, Monica P. Palcic, Ronald L. Schnaar, and Norman J. Dovichi</i>	
2.1	Introduction	21
2.1.1	Glycosphingolipids Play an Important Role in Neuronal Membranes	21
2.1.2	The Metabolism of Glycosphingolipids Is Quite Complex	21
2.1.3	Expression of Glycosphingolipids Is Quite Heterogeneous in Primary Tissues	22
2.1.4	Metabolic Cytometry Has Been Used to Characterize Glycosphingolipid Metabolism in Model Cell Systems	23
2.2	Material and Methods	24
2.2.1	Reagents	24
2.2.2	Cells and Cell Culture	24
2.2.3	Uptake of Fluorescent G _{M1}	25
2.2.4	Homogenate and Single Cell Preparation	25
2.2.5	Capillary Electrophoresis	25
2.3	Results and Discussion	26
2.3.1	Dorsal Root Ganglia Homogenate	26
2.3.2	DRG Single Cells	26
2.4	Conclusions	29
	Acknowledgments	29
	References	29
3	Cell Signaling Studied at the Single-cell Level	31
	<i>Angela Proctor, Shan Yang, Sumith Kottegoda, Michael Brenner, Ryan M. Phillips, Christopher E. Sims, and Nancy L. Allbritton</i>	
3.1	Introduction	31
3.2	Analytes Examined and Reporters Used	32
3.2.1	Reporter Properties	32
3.2.2	Probing System Function	33
3.2.3	Peptides as Reporters	33
3.2.4	Lipids as Reporters	35
3.2.5	Secondary Reporters	35

3.3	Cell Preparation and Reporter Loading	35
3.3.1	Disruptive Loading Methods	36
3.3.2	Nondisruptive Loading Methods	36
3.4	Cell Lysis and Sampling Techniques	37
3.4.1	Chemical Lysis	37
3.4.2	Hypotonic Lysis	39
3.4.3	Laser Lysis	39
3.4.4	Electrical Lysis	40
3.4.5	Sampling Techniques	41
3.4.6	Whole Cell Sampling	41
3.4.7	Subcellular Sampling	42
3.5	Electrophoresis Separation Conditions	43
3.5.1	Buffer Exchange	43
3.5.2	No Buffer Exchange	44
3.5.3	Microchannel Electrophoretic Separations	45
3.6	Detection	46
3.6.1	Instrumentation	46
3.6.1.1	Excitation	46
3.6.1.2	Fiber-optic Cable-based Excitation Pathway	48
3.6.1.3	Emission	48
3.6.1.4	Data Collection and Analysis	48
3.6.2	Limit of Detection (LOD)	49
3.6.3	Detection in a Microfluidic Device	49
3.7	Automation and Throughput	50
3.7.1	Increasing Throughput	50
3.7.2	Capillary-based Devices	51
3.7.3	Microfluidic-based Devices	52
	References	52
4	Ultrasensitive Detection of Low-copy-number Molecules from Single Cells	55
	<i>Kangning Ren and Hongkai Wu</i>	
4.1	Introduction	55
4.2	Microchip Designs for Single-cell Analysis and/or Cell Manipulation	55
4.3	Ultrasensitive Detection Methods for Single-cell Analysis	57
4.3.1	Fluorescence Detection Method	57
4.3.2	Fluorescence Labeling	58
4.3.3	Optical Configuration	60
4.3.4	Molecule-counting Algorithm	63
4.4	Single-cell Analysis with Single-molecule Sensitivity on Integrated Microfluidic Chip	65
4.4.1	Microfluidic Chip Fabrication	66
4.4.2	Analysis of β 2AR in SF9 Cells	67
4.4.3	Analysis of <i>Synechococcus</i>	68

7	On-chip Electroporation and Electrofusion for Single-cell Engineering	107
	<i>Ana Valero and Albert van den Berg</i>	
7.1	Introduction	107
7.2	Single-cell Electroporation in Microfluidic Devices	108
7.2.1	Microdevices for Analyzing Cellular Properties or Intracellular Content	110
7.2.2	Electroporation Microdevices for Cell Inactivation	112
7.2.3	Electroporation Microdevices for Gene Transfection	113
7.3	Single-cell Electrofusion in Microfluidic Devices	117
7.4	Conclusions	120
	References	121
8	Electroporative Flow Cytometry for Single-cell Analysis	125
	<i>Chang Lu, Jun Wang, Ning Bao, and Hsiang-Yu Wang</i>	
8.1	Introduction	125
8.2	Flow-through Electroporation under Constant Voltage	126
8.3	Electroporative Flow Cytometry for Detecting Protein Translocation	128
8.4	Electroporative Flow Cytometry for Measuring Single-cell Biomechanics	134
8.5	Electroporative Flow Cytometry for Selectively Releasing and Analyzing Specific Intracellular Molecules	137
8.6	Conclusions	139
	Acknowledgments	139
	References	139
9	Ultrasensitive Analysis of Individual Cells via Droplet Microfluidics	143
	<i>Robert M. Lorenz and Daniel T. Chiu</i>	
9.1	Introduction	143
9.2	Droplet Properties	143
9.3	Droplet Generation	144
9.4	Cell Encapsulation	146
9.5	Droplet Manipulation	147
9.6	Droplet Concentration Control	149
9.7	Temperature Control of Droplets	150
9.8	Detection in Droplets	152
9.9	Conclusions	155
	References	155
10	Probing Exocytosis at Single Cells Using Electrochemistry	159
	<i>Yan Dong, Michael L. Heien, Michael E. Kurczyk, and Andrew G. Ewing</i>	
10.1	Introduction	159
10.2	Measurement Requirements	160
10.3	Electrode Fabrication	160

10.4	Measurements at Single Cells	161
10.5	Fusion Pore Dynamics	163
10.5.1	Studying Fusion Pore in Living Cells	163
10.5.2	Studying Fusion Pore in Artificial Cells	165
10.5.3	Flickering Fusion Pore	167
10.6	Conclusions	170
	Acknowledgments	171
	References	171
11	Electrochemical Determination of Enzyme Activity in Single Cells	175
	<i>Wenrui Jin</i>	
11.1	Introduction	175
11.2	Electrochemical Detection Coupled with Capillary Electrophoresis	175
11.2.1	Determination of Activity of Glucose-6-phosphate Dehydrogenase (G6PDH) in Single Human Erythrocytes	177
11.2.2	Separation and Determination of Activity of Alkaline Phosphatase (ALP) Isoenzymes in Single BALB/c Fibroblast Cells of Mouse Bone Marrow	178
11.2.3	Separation and Determination of Activity of Lactate Dehydrogenase (LDH) Isoenzymes in Single Rat Glioma Cells	179
11.3	Voltammetry	180
11.4	Scanning Electrochemical Microscopy (SECM)	183
11.5	High-throughput ECD	188
11.6	Perspective	190
	Acknowledgment	190
	References	191
12	Single-cell Mass Spectrometry	197
	<i>Ann Knolhoff, Stanislav Rubakhin, and Jonathan V. Sweedler</i>	
12.1	Introduction	197
12.2	Mass Spectrometry	198
12.2.1	Matrix-assisted Laser Desorption/Ionization	199
12.2.1.1	Sample Preparation for Single-cell MALDI	200
12.2.1.2	Recent Applications of Single-cell MALDI	201
12.2.2	Secondary Ion Mass Spectrometry	205
12.2.2.1	Sample Preparation for Single-cell SIMS	206
12.2.2.2	Recent Applications of Single-cell SIMS	207
12.2.3	Electrospray Ionization	210
12.2.3.1	Recent Applications of Single-cell ESI	210
12.2.4	Other MS Approaches	211
12.3	Overall Outlook for Single-cell MS	213
	Acknowledgments	213
	References	213

10.4	Measurements at Single Cells	161
10.5	Fusion Pore Dynamics	163
10.5.1	Studying Fusion Pore in Living Cells	163
10.5.2	Studying Fusion Pore in Artificial Cells	165
10.5.3	Flickering Fusion Pore	167
10.6	Conclusions	170
	Acknowledgments	171
	References	171
11	Electrochemical Determination of Enzyme Activity in Single Cells	175
	<i>Wenrui Jin</i>	
11.1	Introduction	175
11.2	Electrochemical Detection Coupled with Capillary Electrophoresis	175
11.2.1	Determination of Activity of Glucose-6-phosphate Dehydrogenase (G6PDH) in Single Human Erythrocytes	177
11.2.2	Separation and Determination of Activity of Alkaline Phosphatase (ALP) Isoenzymes in Single BALB/c Fibroblast Cells of Mouse Bone Marrow	178
11.2.3	Separation and Determination of Activity of Lactate Dehydrogenase (LDH) Isoenzymes in Single Rat Glioma Cells	179
11.3	Voltammetry	180
11.4	Scanning Electrochemical Microscopy (SECM)	183
11.5	High-throughput ECD	188
11.6	Perspective	190
	Acknowledgment	190
	References	191
12	Single-cell Mass Spectrometry	197
	<i>Ann Knolhoff, Stanislav Rubakhin, and Jonathan V. Sweedler</i>	
12.1	Introduction	197
12.2	Mass Spectrometry	198
12.2.1	Matrix-assisted Laser Desorption/Ionization	199
12.2.1.1	Sample Preparation for Single-cell MALDI	200
12.2.1.2	Recent Applications of Single-cell MALDI	201
12.2.2	Secondary Ion Mass Spectrometry	205
12.2.2.1	Sample Preparation for Single-cell SIMS	206
12.2.2.2	Recent Applications of Single-cell SIMS	207
12.2.3	Electrospray Ionization	210
12.2.3.1	Recent Applications of Single-cell ESI	210
12.2.4	Other MS Approaches	211
12.3	Overall Outlook for Single-cell MS	213
	Acknowledgments	213
	References	213

13	Optical Sensing Arrays for Single-cell Analysis	219
	<i>Ragnhild D. Whitaker and David R. Walt</i>	
13.1	Introduction to Fiber-optic Single-cell Arrays	219
13.2	Advantages of Fiber-optic Single-cell Arrays	220
13.3	Fiber-optic Arrays	222
13.4	Single-cell Arrays for Bacteria	223
13.4.1	Array Fabrication	223
13.4.2	Labeling and Detection of Cellular Responses in Bacteria Arrays	224
13.5	Single-cell Arrays for Yeast	226
13.5.1	Array Fabrication	226
13.5.2	Labeling and Detection of Cellular Responses in Yeast Arrays	228
13.6	Single-cell Arrays for Mammalian Cells	229
13.7	Image and Data Analysis for Single-cell Arrays	234
13.8	Summary	234
	References	236
	Index	239
