

Content

Chapter-1- Introduction and Overview

1. Introduction
2. History of Transcriptomics
3. The Human Transcriptome Project
4. Transcriptomics strategies
5. Transcriptomics Technology
 - 5.1. Analytical technologies: Separation techniques
 - 5.1.1 Gas chromatography (GC)
 - 5.1.2 High performance liquid chromatography (HPLC)
 - 5.1.3 Capillary electrophoresis (CE)
 - 5.2. Analytical technologies: Detection techniques
 - 5.2.1 Magnetic resonance spectroscopy
 - 5.2.2 Mass spectrometry (MS)
 - 5.3. Transcriptomics in practice
 - 5.4. Technology development in Transcriptomics and approaches
 - 5.4.1 Metabolic profiling and fingerprinting
 - 5.4.2 Transcriptomics in functional genomics
 - 5.4.3 Transcriptomics and Disorders
6. Applications of Transcriptomics
7. Summary
8. References

Chapter- 2- The Insights of Transcriptomics

1. Introduction
2. mRNA regulation
3. Transcriptomics in drug design
 - 3.1 Human cancer hazard assessment
 - 3.2 Impact of transcriptomics on Pharmaceutical Research
 - 3.3 Successful Discoveries and Implementations
 - 3.4 Transcriptomics and Phylogenetics Applications
 - 3.5 Application of transcriptomics in lung biology
4. Fungal Transcriptomics
 - 4.1 Importance
 - 4.2 Ecological role
 - 4.3 Fungi as symbionts
 - 4.4 Fungi as pathogens and parasites
 - 4.5 Nutrition and possible autotrophy in fungi
 - 4.6 The Fungal Morphology
 - 4.6.1 Reproduction
 - 4.7 Phylogeny and classification
 - 4.8 The taxonomic groups of fungi
 - 4.9 Functional analysis of fungal pathogenesis and related genes
 - 4.9.1 Transcriptomics and metabolomics
 - 4.9.2 Probe annotation and alternative
 - 4.9.3 Metabolic pathway analysis and metabolic networks
 - 4.9.4 Heterologous protein expression in filamentous fungi
 - 4.9.5 Parallel to transcriptomics and root-fungi interactions
5. Comparative transcriptomics
 - 5.1 Transcriptional Profiles
 - 5.2 The scope of fungal transcriptomics
 - 5.3 Advances in fungal transcriptomics
6. Nematode Transcriptomics

- 6.1 Morphology
- 6.2 Parasitic species
- 6.3 Phylogeny
- 6.4 Intestinal transcriptomes and laser microdissection microscopy
- 6.5 Phylum nematode transcriptomics
 - 6.5.1 Conservation of transcriptional profiles
 - 6.5.2 Biological results and interpretation
 - 6.5.3 Comparative salivary gland transcriptomics
 - 6.5.4 In Silico Gene Expression Analysis
- 7. Microarrays
 - 7.1 Advantages and disadvantages
 - 7.2 Limitations:
 - 7.3 Serial analysis of gene expression (SAGE)
 - 7.4 cDNA-AFLP
 - 7.4.1 Pre-processing
 - 7.4.2 Background subtraction
 - 7.4.3 Log transformation
 - 7.4.4 Controlling variation
 - 7.4.5 Normalisation
 - 7.5 RFLP-Restriction Fragment Length Polymorphism
 - 7.6 VNTR- Variable number tandem repeat
 - 7.7 SNP-Single nucleotide Polymorphism
 - 7.8 EST-expressed sequence tags
- 8. Importance
- 9. Summary
- 10. References

Chapter- 3- Tissue Specific Transcriptomics and Expression Pattern Analysis

1. Introduction
2. Transcriptome and Transcriptomics
 - 2.1 Assessing the Transcriptome
 - 2.1.1 ESTs and EST databases
 - 2.1.2 cDNA and EST libraries
 - 2.1.3 SAGE
 - 2.1.4 Microarrays
3. Transcriptome Analysis
 - 3.1 Transcriptome analysis
 - 3.2 *Saccharomyces cerevisiae*: A model for transcriptome analyses
 - 3.3 Microarray as a tool of transcriptome analysis
 - 3.4 Comparative transcriptomic analysis
4. Tissue-specific Transcriptomics
 - 4.1 Haploid male gametophyte development in *Arabidopsis*
 - 4.1.1 Developmental changes in the male gametophytic transcriptome
 - 4.1.2 Integrating transcriptomic and experimental data
 - 4.2 Antigenic variation in *Plasmodium falciparum*
5. Expression pattern analysis
 - 5.1 Transcription factor and its correlation with prognosis
6. Tools for Transcriptomics and Transcriptome Analysis
7. Recent Advances in Platelet Transcriptomics
8. Summary
9. References

Chapter-4 - Transcriptomics – Data Analysis Using Tools

1. Introduction
2. Transcriptomics- Overview
 - 2.1 The Genome
 - 2.2 The Transcriptome
 - 2.3 The Modern Transcriptome
 - 2.4 Transcriptomes is not as same as Genome
 - 2.5 Human Transcriptome Project
 - 2.6 Mouse Transcriptome Project
 - 2.7 Transplant Transcriptome Project
 - 2.8 Cancer Transcriptome Project
 - 2.9 Human Mast Cell Transcriptome Project
 - 2.10 Wheat Transcriptome Project
 - 2.11 *Listeria monocytogenes* transcriptome project
 - 2.12 Mammalian Transcriptome project
 - 2.13 The Cardiovascular Transcriptome
3. Transcriptomics-Data Analysis
 - 3.1 Introduction
 - 3.2 Microarrays
 - 3.3 SAGE: Serial Analysis of Gene Expression
 - 3.4 Transcriptomics of *Bacillus subtilis*
 - 3.5 Physiology and transcriptomics of *Halobacterium* sp. NRC-1
 - 3.6 Integrating Transcriptomics and Proteomics
 - 3.7 Transcriptomics in predictive toxicology
4. Tools used in Transcriptomics
 - 4.1 EPCLUST
 - 4.2 SPEXS
 - 4.3 SEQLOGO
 - 4.4 GEPAS
5. Tools for Clustering

- 5.1 Clustering
- 6. Tools for CGH arrays
 - 6.1 ISACGH
- 7. Tools for Functional annotation
 - 7.1 Functional profiling
- 8. Two-step analysis tools
 - 8.1 FatiGO
 - 8.2 NIA Array Analysis Tool
 - 8.3 GEMS
- 9. Role of Various Transcriptomes
 - 9.1 Platelet Transcriptomics in diverse hemostatic and pathological disorders
 - 9.1.1 Benign and malignant prostate epithelial cells
 - 9.1.2 *Yersinia pestis* and Septicaemic plague
 - 9.1.3 Subtle metabolic in insulin-resistant mice
 - 9.1.4 Identification of novel factors enhancing heterologous protein secretion
 - 9.1.5 Pericycle Cells of the Maize
 - 9.1.6 Transcriptome profiling, sequence characterization and SNP-based chromosomal assignment
 - 9.1.7 Transcriptome analysis of live vaccine strain (LVS) *Francisella tularensis* vaccination
 - 9.1.8 Transcriptome Analysis and Pre-Clinical Toxicology
 - 9.1.9 Platelet transcriptome and cardiovascular disease
 - 9.1.10 Phenotypic analysis of murine embryonic stem cell
- 10. Summary
- 11. References
