

Chapter 1. Mechanisms of transcription regulation	3
Transcription regulation of the RNA polymerase II genes	4
General transcription factors and complexes	4
TFIID	4
TFIIA	9
TFIIB	10
TFIIF	11
TFIIE	12
TFIIH	13
RNA polymerase II	14
Mediator	17
TBP-containing complexes implicated in RNAP II transcription	18
TBP-related factors	18
TBP-free TAF-containing complexes	19
Core promoter of the RNAP II genes	23
Structure of the core promoter	23
Recognition of the core promoter by general transcription factors	24
Other core-promoter elements	25
Mechanisms of gene regulation via core promoter	26
Mechanisms of the RNAP II transcription	27
Initiation	27
Elongation	29
Termination	32
Transcription regulation by activators	33
Gene-specific activators	33
Regulation of activator function	34
Transcription activation by enhancers	35
Transcription coactivators function	36
General transcription factors	36
Chromatin remodeling	36
Covalent histone modifications	37
Co-transcriptional regulation of different cellular processes	39
Capping of the 5' end of mRNA	40
Splicing	40
Processing of the 3' end of mRNA	42
mRNA nuclear transport	43
DNA repair	44
Transcription factories	45
Transcription of a ribosomal RNA gene by RNA polymerase I	46
Nucleolar sub-compartments and their functions	46
Transcription factors of RNAP I	47

Dynamics of rRNA transcription	50
Regulatory mechanisms and pathways of RNAP I transcription	50
Spatial conformation of the transcribed rDNA gene	52
The RNA polymerase III transcription	53
Promoter types of the RNAP III transcribed genes	53
The RNAP III transcription factors	54
Methodology for a genome research	55
Chromatin immunoprecipitation	56
ChIP-cloning	56
ChIP-on-chip	56
ChIP-PET	57
ChIP-sequencing	57
CAGE	58
Transcription regulatory networks	58
References	58
Chapter 2. Identification of novel functional TBP-binding sites and general factor repertoires	97
Chapter 3. Topological features of active rRNA genes imply a unique three-dimensional conformation of the rDNA in the nucleolus	115
Chapter 4. ChIP-profiling implies differential TFIIA requirement for transcription of human genes	127
Chapter 5. E2F transcriptional repressor complexes are critical downstream targets of p19ARF/p53-induced proliferative arrest	141
Chapter 6. Selective Anchoring of TFIID to Nucleosomes by Trimethylation of Histone H3 Lysine 4	159
