

Contents

Preface xxiii

CHAPTER 1

RNA and the Cellular Biochemistry Revisited

Why Study RNA?	2
What is RNA?	4
Assembly of Polynucleotides	7
Types of RNA	10
Stringency: Conditions That Influence Nucleic Acid Structure	11
The Effect of Salt on Stringency	13
The Effect of pH on Stringency	13
The Effect of Temperature on Stringency	14
The Effect of Formamide on Stringency	15
Types of Double-Stranded Molecules	15
References and Suggested Reading	16

CHAPTER 2

Transcription and the Organization of Eukaryotic Genes

Transcription and the Central Dogma	18
Regulatory Elements	19
DNA Template	22
Gene Organization	22

RNA Polymerases and the Products of Transcription	26
References	30

CHAPTER 3

Messenger RNA

Topology of a Typical mRNA Molecule	33
5' Cap	34
Leader Sequence	36
Coding Region	36
Trailer Sequence	37
Poly(A) Tail	37
Organellar mRNAs	39
Stability in the Cytoplasm	40
Levels of Regulation	40
References	43

CHAPTER 4

Resilient Ribonucleases

Rationale	48
Elimination of Ribonuclease Activity	48
Types of Ribonuclease Inhibitors	50
Specific Inhibitors	50
Nonspecific Inhibitors	52
Preparation of Equipment and Reagents	53
Diethyl Pyrocarbonate	54
Alternative: Sterile Water for Irrigation	57
Hydrogen Peroxide	57
Sodium Hydroxide and Sodium Dodecyl Sulfate	58
Other Reagents Used to Control Nuclease Activity	58
Guanidine Hydrochloride	59
Guanidine Thiocyanate	59
Sodium Dodecyl Sulfate	59
N-Laurylsarcosine	59
Phenol:Chloroform:Isoamyl Alcohol	60
8-Hydroxyquinoline	61
Cesium Chloride	61
Cesium Trifluoroacetate	61
Proteinase K	62
RNAlater	62
Protocol: Synthesis of Vanadyl Ribonucleoside Complexes	63
References	65

CHAPTER 5

RNA Isolation Strategies

- Rationale 68
- Goals in the Purification of RNA 69
- Lysis Buffer Formulations 72
 - Gentle Lysis Buffers 73
 - RNA Isolation 77
 - Chaotropic Lysis Buffers 80
- Isolation of RNA with Guanidinium Buffers 82
- Guanidinium-Acid-Phenol Extraction Techniques 83
 - Protocol: Guanidinium-Acid-Phenol Extraction 85
- Density Gradient Centrifugation 86
 - Cesium Chloride 87
 - Cesium Trifluoroacetate 93
- Simultaneous Isolation of RNA and DNA 98
 - Protocol: Simultaneous Isolation of RNA and DNA 99
 - Recovery of RNA 101
 - Recovery of DNA 102
- The Word on Kits 103
 - Silica Technology 103
- Other Methods 104
 - Protocol: Rapid Isolation of RNA with Sodium Dodecyl Sulfate and Potassium Acetate Reagents 105
 - Protocol: Isolation of Prokaryotic RNA 106
 - Protocol: Isolation of RNA from Yeast 108
- Short- and Long-Term Storage of Purified RNA 110
- References 112

CHAPTER 6

The Truth About Tissues

- Rationale 115
- Tissue Culture or Tissue? 115
 - Advantages of Cell Culture 116
 - Advantages of Tissue Samples 117
- Homogenization Methods 117
 - Polytron Disruption 118
 - Dounce Homogenization 119
- RNA Isolation Strategies for Various Organs and Tissues 120
 - Fresh Tissue 123
 - Frozen Tissue 123
 - Fixed Tissue 124

Protocol: LiCl-Urea Method for RNA Isolation from Tissue	125
Protocol: RNA Isolation from Lipid-Enriched Tissue	129
Purification of Polysome-Engaged mRNA	131
Protocol: Isolation of Polysomal mRNA	132
Collecting Samples in the Field	134
RNA "Clean-Up" Methods	135
References	136

CHAPTER 7

Isolation of Polyadenylated RNA

Rationale	139
Polyadenylation	140
The Poly(A) Caveat	141
Selection of Polyadenylated Molecules	143
Magnetic Bead Technology for Poly(A) ⁺ Purification	146
Protocol: Purification of Poly(A) ⁺ RNA with Magnetic Beads	149
Oligo(dT)-Cellulose Column Chromatography	152
Protocol: Purification of Biophysical Quantities of Poly(A) ⁺ RNA	153
Rapid, Non-Column Poly(A) ⁺ Purification	158
Protocol: Rapid, Non-Column Poly(A) ⁺ Purification	159
References	161

CHAPTER 8

Quality Control for RNA Preparations

Rationale	164
Quality Control Technique 1: Electrophoretic Profile of the RNA	164
Protocol	167
Quality Control Technique 2: Ultraviolet Spectrophotometry and Absorption Ratios	169
Determination of Nucleic Acid Concentration and Purity	169
Quality Control Technique 3: Sample Capacity to Support RT-PCR	176
Quality Control Technique 4: Northern Analysis	177
Quality Control Technique 5: Sample Capacity to Support <i>In Vitro</i> Translation	177
References	178

CHAPTER 9

Dot Blot Analysis

Rationale	180
Advantages and Disadvantages	182

Appropriate Positive and Negative Controls	184
Protocol: RNA Dot Blots	185
Protocol: DNA Dot Blots	187
Limitations of the Data	188
References	189

CHAPTER 10

Electrophoresis of RNA

Rationale	191
Normalization of Nucleic Acids	192
Protocol: Poly(A) Normalization	195
RNA Denaturing Systems for Agarose Gel Electrophoresis	199
Formaldehyde Denaturation	201
Protocol: Formaldehyde Denaturing Gels	202
Glyoxal/Dimethyl Sulfoxide Denaturation	204
Protocol: Glyoxalation and Electrophoresis of RNA	206
Molecular Weight Standards	208
Proper Use of Standards	210
Ribosomal RNA	212
Gel Staining Techniques	220
Ethidium Bromide	220
SYBR Green	223
SYBR Gold	225
GelStar	226
Silver Staining	226
Acridine Orange	226
Methylene Blue	227
Safety Considerations in Electrophoresis	229
Maintenance of Electrophoresis Equipment	229
Running Agarose Gels for the First Time: A Few Tips	230
Essential Vocabulary	230
Points to Keep in Mind	231
References	235

CHAPTER 11

Photodocumentation and Image Analysis

Rationale	239
Photodocumentation	239
Sample Visualization	241
Filtration	243
Safety First	244

Tips for Optimizing Electrophoretograms	246
Inherent Limitations of Photographic and X-Ray Films	250
Digital Image Analysis	251
Image Formats	257
Practical Considerations	258
Suggested Reading	260

CHAPTER 12

Northern Analysis

Rationale	262
Choice of Filter Membrane	263
Nitrocellulose	264
Nylon	265
Polyvinylidene Difluoride	266
Handling and Filter Preparation	266
Northern Transfer Techniques	267
Capillary Transfer	267
TurboBlotter	269
Vacuum Blotting	269
Positive Pressure	270
Electroblotting	271
Alkaline Blotting	272
Protocol: RNA Transfer by Passive Capillary Diffusion	272
Protocol: TurboBlotter Downward Transfer of RNA	275
Post-Transfer Handling of Filters	279
Formaldehyde Denaturing Systems	279
Glyoxal Denaturing Systems	279
Immobilization Techniques	279
Baking	280
Crosslinking by Ultraviolet Irradiation	280
Protocol: Ultraviolet Crosslinking RNA to Nylon Filters	281
Postfixation Handling of Filters	282
References	283

CHAPTER 13

Nucleic Acid Probe Technology

Rationale	286
Probe Classification	287
Selection of Labeling System	288
Isotope Labeling	289
Nonisotopic Labeling	296

DNA Probes	300
DNA Probe Synthesis	302
Antisense RNA Probes	306
Characteristics of RNA Probes	308
RNA Probe Synthesis	309
Probe Purification	311
Probe Storage	311
Internal Controls	312
References	315

CHAPTER 14

Practical Nucleic Acid Hybridization

Rationale	318
Factors Influencing Hybridization Kinetics and Specificity	319
Temperature	320
Ionic Strength	321
pH	321
Probe Length	321
Probe Concentration	322
G+C Content	322
Mismatching	323
Probe Complexity	324
Viscosity	324
Formamide	325
Hybridization Temperature	325
T_m for Long Probes	326
T_m for Oligonucleotide Probes	326
Hybridization and the Northern Analysis	327
Prehybridization: Filter Preparation	328
Protocol: Prehybridization (Long Probes)	328
Probe Denaturation	330
Hybridization	330
Posthybridization Stringency Washes	331
References	332

CHAPTER 15

Principles of Detection

Rationale	334
Autoradiography	335
Handling of Filter Membranes	339
X-Ray Film	339

Safelight	341
Exposure Time	341
Intensifying Screens	342
Fluorography	343
Preflashing Film	344
Type of Cassette	344
Development and Fixation	345
Autoradiography: Suggested Protocol	345
Nonisotopic Procedures	348
Biotin	349
Digoxigenin	351
Fluorescent Nucleotides	352
Direct Enzyme Labeling	352
Detection by Chemiluminescence	353
Chromogenic Detection Procedures	357
Digital Imaging Systems	358
References	359

CHAPTER 16

Quantification of Specific mRNAs by Nuclease Protection

Rationale	362
Basic Approach	365
Probe Selection	368
Optimization Suggestions	372
Potential Difficulties	374
Protocol: Transcript Quantification by S1 Nuclease Assay	377
Protocol: Transcript Quantification by RNase Protection Assay	381
References	385

CHAPTER 17

Analysis of Nuclear RNA

Rationale	388
Transcription Rate Assays	388
Protocol: Nuclear Runoff Assay	395
Harvesting of Cells and Preparation of Nuclei	395
Cellular Lysis with NP-40 Buffer	396
Alternative Protocol for Preparation of Nuclei: Isolation of Fragile Nuclei from Tissue Culture Cells	397
Alternative Protocol for Preparation of Nuclei: Isolation of Nuclei from Whole Tissue	399
Labeling of Transcripts	399

Recovery of Labeled Transcripts	401
Preparation of Target DNA	403
Preparation of RNA for Hybridization	405
Posthybridization Washes and Detection	407
Protocol: Nuclear Runoff Assay: Alternative Procedure	407
Protocol: Nuclease Protection and Pulse Label Transcription Assay	409
Distinguishing Among the Activities of RNA Polymerases I, II, and III	412
Extraction of Nuclear RNA for Steady-State Analysis	414
Protocol: Direct Isolation of Nuclear RNA	415
Protocol: Preparation of Nuclear RNA from Cells Enriched in Ribonuclease	417
References	418

CHAPTER 18

cDNA Synthesis

Rationale	422
cDNA Synthesis—An Overview	422
First-Strand Considerations	424
Second-Strand Considerations	433
Assessing Complementary DNA Synthesis Efficiency	436
Ligation Considerations	436
References	438

CHAPTER 19

RT-PCR

Rationale	440
PCR—An Overview	440
RT-PCR—General Approach	446
Laboratory Design	452
Primer Design	452
Basic Rules	458
T _m Considerations	461
Optimization Procedures	462
Analysis of PCR Products	471
RT-PCR Quality Control Points	471
Related Techniques	474
5' RACE PCR	474
3' RACE PCR	477
Nested PCR	478
Protocol: First-Strand cDNA Synthesis	479
Protocol: PCR Amplification of cDNA	481
Cloning PCR Products	482

Protocol: A-Tailing of Blunt-End PCR Products	484
Protocol: TA Cloning Ligation Reaction	485
TOPO Cloning	487
References	487

CHAPTER 20

Quantitative PCR Techniques

Rationale	491
Sensitivity Index	492
Quantitative Approaches	493
Internal Controls	494
Exogenous Controls	497
Control Reaction Formats	500
Negative Control Considerations	503
Competitive PCR: Key Considerations	505
Competitive PCR: Major Steps Involved	512
Protocol: Competitive PCR	514
Synthesis of Nonhomologous Competitor	515
Synthesis of First-Strand cDNA	517
Competitive PCR (Primary Amplification)	518
Competitive PCR (Secondary Amplification)	520
Image Analysis Considerations	522
Troubleshooting Competitive PCR	522
Real-Time PCR	526
References	532

CHAPTER 21

Transcript Subtraction Methods

Rationale	537
Essential Issues	539
Subtraction-Suppression PCR	541
Non-PCR Subtraction	548
Troubleshooting Subtraction Methods	550
References	553

CHAPTER 22

mRNA Differential Display

Rationale	556
General Approach	557

Product Variety: What to Expect	568
Protocol: mRNA Differential Display	571
Synthesis of cDNA	571
Amplification of cDNA Subpopulations by PCR	573
PCR Product Analysis	574
Protocol: Identification and Selection of Differentially Expressed Sequences	577
Recovery of Differentially Expressed Sequences by Affinity Capture	578
Cloning PCR Products	580
Confirmation of Differential Expression	581
Subsequent Characterization	581
Applications of Differential Display	582
Troubleshooting mRNA Differential Display	583
References	586

CHAPTER 23

High-Throughput Analysis of Gene Expression

Rationale	589
What Is a Microarray?	589
What Microarrays Can Do	591
What Microarrays Cannot Do	593
Major Steps in Microarray Analysis	596
Reference RNA	598
Applications	599
References	600

CHAPTER 24

RNA Interference: Targeted Gene Silencing

Rationale	602
Essential RNAi Nomenclature	603
RNAi—How It Works	605
siRNA Approach	608
shRNA Approach	608
DNA-Directed RNA Interference	610
Short Interfering RNA Delivery Methods into Mammalian Cells	611
Effective Design of siRNAs	612
<i>In Vitro</i> and <i>In Vivo</i> Issues	614
References	617

CHAPTER 25

Genomes, Transcriptomes, Proteomes, and Bioinformatics

- Rationale 621
Essential Nomenclature 622
Genomes and Genomics 624
Transcriptomes and Transcriptomics 625
Proteomes and Proteomics 626
Bioinformatics 628
References 631

CHAPTER 26

An RNA Paradigm

- A Typical Experiment? 635
Sensitivity Issues 639
What to Do Next 639
Where to Turn for Help 642

EPILOGUE

A Few Pearls of Wisdom 644

APPENDIX A

Maintaining Complete and Accurate Records 651

APPENDIX B

Useful Stock Solutions for the Molecular Biologist 654

APPENDIX C

Phenol Preparation 661

- Phenol Saturation 662
Procedure 1: Tris Saturation 663
Procedure 2: Water Saturation 664
