|------------------------------------------------------------------------------------------------------|------|
| <b>List of contributors</b>                                                                          | ix   |
| <b>Preface</b>                                                                                       | xiii |
| <b>Chapter 1. Bioprocessing – from biotechnology to biorefinery</b>                                  | 1    |
| Shang-Tian Yang                                                                                      |      |
| <b>Part I. Enabling Technologies</b>                                                                 |      |
| <b>Chapter 2. Application of genomic and proteomic data for bioprocess analysis and optimization</b> | 25   |
| An-Ping Zeng, Jibin Sun, Wei Wang, Hongwu Ma, and Wolf-Dieter Deckwer                                |      |
| <b>Chapter 3. Directed evolution tools in bioproduct and bioprocess development</b>                  | 49   |
| Sheryl B. Rubin-Pitel, Catherine M-H. Cho, Wilfred Chen, and Huimin Zhao                             |      |
| <b>Chapter 4. Metabolic engineering: applications, methods, and challenges</b>                       | 73   |
| Shang-Tian Yang, Xiaoguang Liu, and Yali Zhang                                                       |      |
| <b>Chapter 5. Amylase and cellulase structure and function</b>                                       | 119  |
| Peter J. Reiley                                                                                      |      |
| <b>Chapter 6. Bioreactor engineering</b>                                                             | 131  |
| Si-Jing Wang and Jian-Jiang Zhong                                                                    |      |
| <b>Chapter 7. Membranes for bioseparations</b>                                                       | 163  |
| Chia-Chi Ho                                                                                          |      |
| <b>Part II. Cultures for Bioprocessing</b>                                                           |      |
| <b>Chapter 8. Bacterial and yeast cultures – process characteristics, products, and applications</b> | 185  |
| Wei-Cho Huang and I-Ching Tang                                                                       |      |

|             |                                                                                          |     |
|-------------|------------------------------------------------------------------------------------------|-----|
| Chapter 9.  | Filamentous fungal cultures – process characteristics, products, and applications        | 225 |
|             | Hesham El-Enshasy                                                                        |     |
| Chapter 10. | Plant cell and hairy-root cultures – process characteristics, products, and applications | 263 |
|             | Wei Wen Su and Kung-Ta Lee                                                               |     |
| Chapter 11. | Production of high-value products by marine microalgae thraustochytrids                  | 293 |
|             | King Wai Fan and Feng Chen                                                               |     |

### **Part III. Unconventional and Novel Bioprocesses**

|             |                                                                                                     |     |
|-------------|-----------------------------------------------------------------------------------------------------|-----|
| Chapter 12. | Nonconventional biocatalysis for production of chemicals and polymers from biomass                  | 325 |
|             | Ping Wang                                                                                           |     |
| Chapter 13. | Biocatalysis for chiral synthesis                                                                   | 351 |
|             | Hyun-Dong Shin, Xuan Guo, and Rachel R. Chen                                                        |     |
| Chapter 14. | Immobilized cell fermentation for production of chemicals and fuels                                 | 373 |
|             | Ying Zhu                                                                                            |     |
| Chapter 15. | Water-in-oil cultivation technology for viscous xanthan gum fermentation                            | 397 |
|             | Lu-Kwang Ju                                                                                         |     |
| Chapter 16. | Extractive fermentation for the production of carboxylic acids                                      | 421 |
|             | Shang-Tian Yang, Hanjing Huang, Abdullatif Tay, Wei Qin, Lucita De Guzman, and Ellen C. San Nicolas |     |
| Chapter 17. | Fungal fermentation for medicinal products                                                          | 447 |
|             | Chin-Han Shu                                                                                        |     |
| Chapter 18. | Solid state fermentation and its applications                                                       | 465 |
|             | Liping Wang and Shang-Tian Yang                                                                     |     |

|             |                                                                             |     |
|-------------|-----------------------------------------------------------------------------|-----|
| Chapter 19. | Algal photobioreactor for production of lutein and zeaxanthin               | 491 |
|             | Attaya Wasanasathian and Ching-An Peng                                      |     |
| Chapter 20. | Power-generation from biorenewable resources: biocatalysis in biofuel cells | 507 |
|             | Ping Wang and Hongfei Jia                                                   |     |
| Chapter 21. | Biological production of hydrogen from renewable resources                  | 527 |
|             | Zhinan Xu                                                                   |     |

#### Part IV. Feedstock Utilization

|             |                                                                 |     |
|-------------|-----------------------------------------------------------------|-----|
| Chapter 22. | Bioconversion of whey lactose into microbial exopolysaccharides | 559 |
|             | Y. Martin Lo, Sanem Argin-Soysal, and Chia-Hua Hsu              |     |
| Chapter 23. | Microbial production of bioplastics from renewable resources    | 585 |
|             | Jian Yu                                                         |     |
| Chapter 24. | Industrial applications for plant oils and lipids               | 611 |
|             | Bernie Y. Tao                                                   |     |
| Chapter 25. | Value-added products from animal manure                         | 629 |
|             | Zhiyou Wen, Wei Liao, Chuanbin Liu, and Shulin Chen             |     |

|              |     |
