

Recombinant DNA Technology

DNA Isolation and Purification	2
Electrophoresis Separates DNA Fragments by Size	2
Restriction Enzymes Cut DNA; Ligase Joins DNA	4
Methods of Detection for Nucleic Acids	5
Radioactive Labeling of Nucleic Acids and Autoradiography	7
Fluorescence Detection of Nucleic Acids	10
Chemical Tagging with Biotin or Digoxigenin	10
Complementary Strands Melt Apart and Reanneal	11
Hybridization of DNA or RNA in Southern and Northern Blots	12
Fluorescence <i>in Situ</i> Hybridization (FISH)	14
General Properties of Cloning Vectors	15
Useful Traits for Cloning Vectors	16
Specific Types of Cloning Vectors	18
Getting Cloned Genes into Bacteria by Transformation	21
Constructing a Library of Genes	21
Screening the Library of Genes by Hybridization	23
Eukaryotic Expression Libraries	23
Features of Expression Vectors	25
Subtractive Hybridization	28
