

目 录

动物模型与方法

Aging and Memory in Animals	3
Aging: Invertebrate Models of Normal Brain Aging	11
Alzheimer's Disease: Transgenic Mouse Models	19
Animal Models of Alzheimer's Disease.....	24
Animal Models of Amnesia.....	31
Animal Models of Huntington's Disease	37
Animal Models of Inherited Retinal Degenerations.....	45
Animal Models of Motor and Sensory Neuron Disease	56
Animal Models of Parkinson's Disease.....	62
Animal Models of Stroke	71
BAC Transgenesis: Cell-Type Specific Expression in the Nervous System.....	79
<i>Drosophila</i> Apterous Neurons: From Stem Cell to Unique Neuron	88
Drug Addiction: Behavioral Pharmacology of Drug Addiction in Rats	93
Episodic Memory: Assessment in Animals.....	101
Executive Function and Higher-Order Cognition: Assessment in Animals	111
Inherited Macular Degenerations: Animal Models.....	117
Invertebrate Models to Study Learning and Memory: <i>Lymnaea</i>	125
Learning and Memory in Invertebrate Models: <i>Tritonia</i>	133
Learning and Memory in Invertebrates: <i>Aplysia</i>	137
Learning and Memory in Invertebrates: <i>C-Elegans</i>	145
Learning and Memory in Invertebrates: <i>Drosophila</i>	153
Learning and Memory in Invertebrates: <i>Hermisenda</i>	159
Learning and Memory in Invertebrates: Honey Bee	166
Learning and Memory in Invertebrates: <i>Limax</i>	171
Learning and Memory in Invertebrates: Mollusks	176
Mammalian Sleep and Circadian Rhythms: Flies.....	184
Neural Induction in Chicks	191
Non-Primate Models of Normal Brain Aging	197
Procedural Learning in Animals	205
Rodent Aging	210
Spatial Memory: Assessment in Animals	220

Transgenic Models of Neurodegenerative Disease.....	228
VelociGene and VelociMouse: High-Throughput Approaches for Generating Targeted Mutations in Mice on a Genome-Wide Scale.....	231

生物化学、细胞与分子生物学

Atomic Force Microscopy Methodologies.....	241
BAC Use in the Study of the CNS.....	245
Cell Culture: Autonomic and Enteric Neurons.....	253
Cell Culture: Primary Neural Cells.....	261
Cellular Dynamics Revealed by Digital Holographic Microscopy.....	266
Chromaffin Cells: Model Cells for Neuronal Cell Biology.....	275
Decoding Neuron Transcriptome by SAGE.....	284
Engineering Viruses for CNS studies.....	291
Fluorescence Microscopy in the Neurosciences.....	301
Fluorescent Biomarkers in Neurons.....	309
Glial Ion Homeostasis: A Fluorescence Microscopy Approach.....	320
Imaging Studies Using Reporter-Gene Transgenic Rats.....	329
Mass Spectroscopy of Proteins.....	335
Memory: Genetic Approaches.....	342
Microarray use for the Analysis of the CNS.....	352
Microglia Identification Methods.....	359
Monoamines: Release Studies.....	363
Neurophysiology: Past and Present.....	371
Neuroproteomics.....	376
Nucleic Acid Introduction into Primary Neurons and Glia.....	387
Oligodendrocyte and Schwann Cell Identification Methods.....	391
Optical Monitoring of Exo- and Endocytosis.....	397
Photolysis of Caged Glutamate for Use in the CNS.....	402
RNA Binding Protein Methods.....	408
Rodent Behavior: Approaches.....	414
Single Cell Electroporation.....	421
Single Cell Genomic DNA Analysis.....	428
Single Cell Molecular Analysis Procedures.....	433
Single Cell PCR Coupled with Electrophysiology.....	438
Single-Nucleotide Polymorphism (SNP) Analysis.....	443
siRNA: Utility.....	448
Synaptosomes.....	457

Ultrastructural Analysis of Spine Plasticity	461
Viral Vectors in the CNS.....	468

其他系统神经科学方法

Connectionist Models.....	481
Deep Brain Stimulation.....	489
Neuroanatomy Methods in Humans and Animals.....	493
Neuroinformatics.....	503
Statistical Tests and Inferences.....	511
原书词条中英对照表.....	519
