Preface	xxi
1 RNA and the Cellular Biochemistry Revisited	1
Why Study RNA?	1
What is RNA?	2
Assembly of Polynucleotides	5
Types of RNA	8
Transcription and the Central Dogma	10
Important Plant and Animal Models for Studying Transcription	11
Promoters and Regulatory Elements	12
Gene and Genome Organization Affect Transcription	14
RNA Polymerases and the Products of Transcription	18
Messenger RNA	22
Topology of a Typical mRNA Molecule	23
5' Cap	23
Leader Sequence	25
Coding Region	25
Trailer Sequence	26
Poly(A) Tail	26
Organellar mRNAs	28
mRNA Stability, Transport, and Turnover	29
Bicistronic mRNAs	30
Prokaryotic mRNAs	30
mRNA Sequence and Structure Affect Translation	31
Levels of Gene Regulation	32
Alternative Splicing of mRNA from a Single Genetic Locus	34
Trans-splicing: mRNA Repair	35
Overview of Small RNAs	36
miRNA Regulation of Gene Expression	37
References	38
2 RNA Isolation Strategies	45
Rationale	45
Goals in the Purification of RNA	47
Lysis Buffer Formulations	49
Gentle Lysis Buffers	49

Protocol: Isolation of Cytoplasmic RNA by Hypotonic Lysis	51
Chaotropic Lysis Buffers	56
Isolation of RNA with Guanidinium Buffers	57
Guanidinium–Acid–Phenol Extraction Techniques	58
Protocol: Guanidinium–Acid–Phenol Extraction	59
Density Gradient Centrifugation	60
Cesium Chloride	61
Protocol: Cesium Chloride (CsCl) Gradients	61
Cesium Trifluoroacetate (CsTFA)	65
Protocol: Cesium Trifluoroacetate (CsTFA) Gradients	65
Simultaneous Isolation of RNA and DNA	68
Protocol: Simultaneous Isolation of RNA and DNA	69
The Word on Kits	71
Silica Technology	72
Isolation of Cytoplasmic RNA on a Silica Column	73
Affinity Matrices	73
Other Methods	74
Protocol: Rapid Isolation of RNA with SDS and Potassium Acetate Reagents	74
Protocol: Isolation of Prokaryotic RNA	75
Protocol: Isolation of RNA from Yeast	76
Short- and Long-Term Storage of Purified RNA	78
References	79
3 The Truth about Tissues	81
Rationale	81
Tissue Culture or Tissue?	81
Advantages of Cell Culture	82
Advantages of Tissue Samples	83
Homogenization Methods	84
Polytron Disruption	84
Dounce Homogenization	86
BeadBeater™ Technique	87
RNA Isolation Strategies for Various Organs and Tissues	87
Fresh Tissue	89
Frozen Tissue	90
Fixed Tissue	91
Protocol: LiCl–Urea Method for RNA Isolation from Tissue	92
Protocol: RNA Isolation from Lipid-Enriched Samples	95
Purification of Polysome-Engaged mRNA	96
Protocol: Isolation of Polysomal mRNA	98
Collecting Samples in the Field	99
RNA “Clean-Up” Methods	100

Troubleshooting RNA Isolation from Tissue	101
References	102
4 Going Green: RNA and the Molecular Biology of Plants	105
Rationale	105
RNA Isolation and the Peculiarities of Plants	105
Types of RNA Produced in Plant Cells	109
Protocol: RNA Isolation from Leaf	110
Protocol: RNA Isolation from Bark	112
Protocol: RNA Isolation from Fruit	113
Strategies for RNA Isolation from Other Plant Tissues	115
Troubleshooting RNA Isolation from Plant Tissue	116
References and Suggested Reading	117
5 Isolation of Polyadenylated RNA	121
Rationale	121
Polyadenylation	122
The Poly(A) Caveat	123
Example 1	124
Example 2	124
Selection of Polyadenylated Molecules	126
Magnetic Bead Technology for Poly(A) ⁺ Purification	127
Oligo(dT)-Cellulose Column Chromatography	129
Protocol: Purification of Biophysical Quantities of Poly(A) ⁺ RNA	130
Rapid, Non-Column Poly(A) ⁺ Purification	135
Protocol: Non-Column Poly(A) ⁺ Purification	135
References	136
6 Quality Control for RNA Preparations	139
Rationale	139
Quality Control Technique 1: UV Spectrophotometry and Absorption Ratios	140
Spectrophotometric Methods	140
Determination of Nucleic Acid Concentration	141
Determination of Nucleic Acid Purity	143
Non-spectrophotometric Methods	145
Quality Control Technique 2: Electrophoretic Profile of the RNA	147
Protocol	149
Quality Control Technique 3: UV Shadowing	150
Protocol	151
Quality Control Technique 4: Sample Capacity to Support RT-PCR	152
Quality Control Technique 5: Northern Analysis	153
Quality Control Technique 6: Sample Capacity to Support <i>In Vitro</i> Translation	153
References	154

7 Resilient Ribonucleases	155
Rationale	155
Elimination of Ribonuclease Activity	156
Latent RNase Contamination Issues	157
Types of Ribonuclease Inhibitors	158
Specific Inhibitors	158
Vanadyl Ribonucleoside Complex (VDR; VRC)	158
RNasin®	159
Non-specific Inhibitors	160
Preparation of Equipment and Reagents	161
Diethyl Pyrocarbonate (DEPC)	162
Alternative: Sterile Water	164
Hydrogen Peroxide	164
NaOH and SDS	165
Other Reagents Used to Control Nuclease Activity	165
Guanidine Hydrochloride	165
Guanidine Thiocyanate	165
Sodium Dodecyl Sulfate	166
N-Laurylsarcosine	166
Phenol:Chloroform:Isoamyl Alcohol	166
8-Hydroxyquinoline	167
Cesium Chloride	167
Cesium Trifluoroacetate	168
Proteinase K	168
RNAlater®	169
Protocol: Synthesis of VDR	169
References	170
8 Stringency: Conditions that Influence Nucleic Acid Structure	173
Types of Double-Stranded Molecules	173
Importance of Controlling Stringency	174
Effect of Salt on Stringency	176
Effect of pH on Stringency	176
Effect of Temperature on Stringency	177
Effect of Formamide on Stringency	177
Effect of Urea on Stringency	177
References	178
9 Electrophoresis of RNA	179
Rationale	179
Normalization of Nucleic Acids	180
Protocol: Poly(A) Normalization	183
Sample Preparation	183
RNA Denaturing Systems for Agarose Gel Electrophoresis	185
Formaldehyde Denaturation	187

Protocol: Formaldehyde Denaturing Gels	188
Urea Denaturation	189
Protocol: Urea Denaturation	191
Glyoxal/Dimethyl Sulfoxide Denaturation	191
Protocol: Glyoxalation and Electrophoresis of RNA	192
Running RNA on Non-denaturing Gels	194
Molecular Weight Standards	194
Proper Use of Size Standards	195
Ribosomal RNA	197
Gel Staining Techniques	204
Ethidium Bromide	204
SYBR® Green	207
SYBR® Gold	207
SYBR® Safe	208
GelStar®	209
Silver Staining	209
Acridine Orange	210
Methylene Blue	210
Safety Considerations and Equipment Maintenance	212
Running Agarose Gels for the First Time: A Few Tips	213
Essential Vocabulary	213
Points to Keep in Mind	213
References	216
10 Photodocumentation and Image Analysis	221
Rationale	221
Safety First	222
Digital Image Analysis	223
Image Formats	228
Practical Considerations	229
Digital Image Analysis for Every Budget	231
Image Analysis Workshops	232
PhosphorImagers	232
Traditional Methods of Photodocumentation	233
Sample Visualization	234
Filtration	234
Tips for Optimizing Electrophoretograms	235
Inherent Limitations of Photographic and X-ray Films	238
References and Suggested Reading	239
11 Northern Analysis	241
Rationale	241
Choice of Filter Membrane	242
Nitrocellulose	243
Nylon	244
Polyvinylidene Difluoride	245

Handling and Filter Preparation	245
Northern Transfer Techniques	246
Capillary Transfer	246
TurboBlotter™	247
Vacuum Blotting	248
Electroblotting	249
Alkaline Blotting	249
Protocol: RNA Transfer by Passive Capillary Diffusion	250
Protocol: TurboBlotter Downward Transfer of RNA	252
Post-Transfer Handling of Filters	254
Formaldehyde Denaturing Systems	254
Glyoxal Denaturing Systems	254
Option 1	254
Option 2	255
Immobilization Techniques	255
Baking	255
Crosslinking by UV Irradiation	256
Protocol: UV Crosslinking RNA to Nylon Filters	257
Post-Fixation Handling of Filters	257
Reverse Northern Analysis	258
References	259
12 Nucleic Acid Probe Technology	261
Rationale	261
Probe Classification	263
Selection of Labeling System	263
Isotope Labeling	265
Minimizing Decomposition Problems	266
Non-Isotopic Labeling	267
The Ubiquitous Dyes Cy3 and Cy5	267
Popular Chemiluminescence Formats	268
Biotin	268
Digoxigenin	270
Fluorescein	271
Direct Enzyme Labeling	271
DNA Probes	272
DNA Probe Synthesis	273
Polymerase Chain Reaction	274
Random Priming	274
Nick Translation	274
5' End-Labeling	275
3' End-Labeling	275
Antisense RNA Probes	276
Characteristics of RNA Probes	278
RNA Probe Synthesis	278
<i>In Vitro</i> transcription	278

5' End-Labeling	279
3' End-Labeling	279
Probe Purification	279
Probe Storage	280
References	281
13 Practical Nucleic Acid Hybridization	283
Rationale	283
Factors Influencing Hybridization Kinetics and Duplex Stability	284
Temperature	285
Ionic Strength	286
pH	287
Probe Length	287
Probe Concentration	287
G+C Content	288
Mismatching	288
Probe Complexity	289
Viscosity	289
Formamide	290
Urea	290
Hybridization Temperature	291
T_m for Long Probes	291
T_m for Oligonucleotide Probes	292
Hybridization and the Northern Analysis	292
Prehybridization: Filter Preparation	293
Protocol: Prehybridization for Long Probes	293
Probe Denaturation	294
Hybridization	295
Posthybridization Stringency Washes	295
Probe Removal and Rehybridization	296
Protocol: Generic Method for Probe Removal	297
References	298
14 Principles of Detection	301
Rationale	301
Autoradiography	302
Handling of Filter Membranes	304
X-ray Film	305
Safe light	306
Exposure Time	306
Intensifying Screens	307
Fluorography	308
Preflashing Film	309
Type of Cassette	309
Development and Fixation	310

Protocol: Autoradiography	310
Non-isotopic Procedures	312
Biotin	313
Digoxigenin	313
Fluorescence Imaging	314
Direct Enzyme Labeling	314
Detection by Chemiluminescence	314
Substrate for Chemiluminescence	315
Chromogenic Detection Procedures	317
Digital Imaging Systems	318
References	320
15 Quantification of Specific mRNAs by Nuclease Protection	321
Rationale	321
Basic Approach	322
Probe Selection	327
Optimization Suggestions	329
Potential Difficulties	330
Protocol: Transcript Quantification by S1 Analysis	332
Protocol: Transcript Quantification by RNase Protection	335
Troubleshooting	337
References	338
16 Analysis of Nuclear RNA	341
Rationale	341
Transcription Rate Assays	343
Relationship to the Study of Steady-State RNA	346
Nuclear Run-off vs. Nuclear Run-on Assay	347
Protocol: Nuclear Run-off Assay	348
Harvesting of Cells and Preparation of Nuclei	349
Alternative Protocol for Preparation of Fragile Nuclei	349
Alternative Protocol for Preparation of Nuclei from Whole Tissue	350
Labeling and Recovery of Transcripts	351
Preparation of Target DNA	353
Preparation of RNA for Hybridization	354
Posthybridization Washes and Detection	355
Protocol: Alternative Procedure for Nuclear Run-off Assay	356
Protocol: Nuclease Protection – Pulse Label Transcription Assay	357
Distinguishing Among the Activities of RNA Polymerases	359
Extraction of Nuclear RNA for Steady-State Analysis	360
Protocol: Direct Isolation of Nuclear RNA	361
Protocol: Preparation of Nuclear RNA from Cells Enriched in Ribonuclease	362
Troubleshoot Nuclear RNA Analysis	363
References	364

17 cDNA Synthesis	367
Rationale	367
cDNA Synthesis – An Overview	368
First-Strand Considerations	369
Reverse Transcriptase Options	372
Second-Strand Considerations	375
Classical Methods	376
PCR-Based Methods	377
Protocol: First-Strand cDNA Synthesis	377
Assessing cDNA Synthesis Efficiency	379
Cloning cDNA	379
Ligation Considerations	381
Enzymes Used for Ligation	383
Applications	383
References	384
18 RT-PCR: A Science and an Art Form	385
Rationale	385
PCR – An Overview	386
RT-PCR – General Approach	391
PCR Carryover Prevention	395
Laboratory Design	395
Procedural Methods	396
Aerosol-Resistant Tips	397
Uracil-N-Glycosylase	398
Primer Design	398
Basic Rules	402
T _m Considerations	406
Estimating T _m	406
Precision T _m Calculations	407
On-line Resources	407
Multiplex Primer Design	407
Optimization Procedures	408
Thermostable Polymerases	411
Positive Controls	413
Negative Controls	413
Hot Start PCR	413
Locked Nucleic Acids	415
Touchdown PCR	416
Internal Controls	416
The Word on Transcription Controls	419
Analysis of PCR Products	420
RT-PCR Quality Control Points	421
Non-PCR Methods for Confirming PCR-derived Data	423
Related Techniques	424

5' RACE PCR	424
5' RLM-RACE	426
3' RACE PCR	426
Nested PCR	428
Long-Range PCR	429
Single Cell PCR	431
Splinkerette PCR	433
The Hunt for Alternative Transcription Start Sites	434
Protocol: First-Strand cDNA Synthesis	435
Protocol: PCR Amplification of cDNA	436
Cloning PCR Products	437
Protocol: A-Tailing of Blunt-End PCR Products	438
Protocol: TA Cloning Ligation Reaction	438
TOPO® Cloning	440
Other Amplification Procedures	441
Linear RNA Amplification (Eberwine Process)	441
Strand Displacement Amplification	442
Nucleic Acid Sequence Based Amplification (NASBA)	443
Ligase Chain Reaction	443
References	443
19 Quantitative PCR Techniques	449
Rationale	449
Sensitivity Index	450
Quantitative Approaches	451
Real-Time PCR	453
Real-Time PCR Platforms	456
