

Brief Contents

1	Introduction to Genetics	1
2	Mitosis and Meiosis	17
3	Mendelian Genetics	37
4	Modification of Mendelian Ratios	60
5	Sex Determination and Sex Chromosomes	92
6	Chromosome Mutations: Variation in Number and Arrangement	111
7	Linkage and Chromosome Mapping in Eukaryotes	132
8	Genetic Analysis and Mapping in Bacteria and Bacteriophages	159
9	DNA Structure and Analysis	181
10	DNA Replication and Recombination	203
11	Chromosome Structure and DNA Sequence Organization	224
12	The Genetic Code and Transcription	240
13	Translation and Proteins	261
14	Gene Mutation, Transposition, and DNA Repair	284
15	Regulation of Gene Expression	308
16	Cancer and Regulation of the Cell Cycle	334
17	Recombinant DNA Technology and Gene Cloning	351
18	Genomics, Bioinformatics, and Proteomics	375
19	Applications and Ethics of Genetic Engineering and Biotechnology	407
20	Developmental Genetics	433
21	Genetics and Behavior	450
22	Quantitative Genetics and Multifactorial Traits	465
23	Population and Evolutionary Genetics	483
24	Conservation Genetics	507

APPENDIX A ANSWERS TO SELECTED PROBLEMS A-1

About the Authors

William S. Klug is currently Professor of Biology at the College of New Jersey (formerly Trenton State College) in Trenton, New Jersey. He served as Chairman of the Biology Department for 17 years, a position to which he was first elected in 1974. He received his B.A. degree in Biology from Washington State University in Pullman, Washington, and his Ph.D. from Northwestern University in Evanston, Illinois. Prior to coming to the College of New Jersey, he was on the faculty of Washington State University. His research interests include the molecular genetics of eukaryotic organisms in *Drosophila*. He has taught the genetics course as well as the senior capstone seminar course in biology. He has been a senior capstone seminar course in biology. He has been a senior capstone seminar course in biology. He has been a senior capstone seminar course in biology.

Michael R. Cummings is currently Research Professor in the Department of Biological, Chemical, and Physical Sciences at Illinois Institute of Technology, Chicago, Illinois. For more than 25 years, he was a faculty member in the Department of Biological Sciences and in the Department of Molecular Genetics at the University of Illinois at Chicago. He has also served on the faculty of Northwestern University and Florida State University. He received his B.A. from St. Mary's College in Winona, Minnesota, and his M.S. and Ph.D. from Northwestern University in Evanston, Illinois. In addition to *Escherichia coli*, he has authored several texts in human genetics and general biology for nonmajors. His research interests center on the molecular organization and physical mapping of the heterochromatic regions of human acrocentric chromosomes. At the undergraduate level, he teaches courses in Mendelian and molecular genetics, human genetics, and general biology, and has received numerous awards for outstanding excellence given by university faculty, student organizations, and graduating seniors.
