

Contents

Preface

v

1. Origin and Evolution Angiosperms 1-50

Evolution of Plants; Tracing the Origin of Angiosperms; Ancestors of Angiosperms; Some Examples of Primitive Angiosperms; Angiosperm Diversity; Drawbacks of Plant Evolution Theory

2. History of Plant Taxonomy 51-80

Development of Plant Taxonomy; Aims and Objectives; Taxonomic Keys; History of Plant Classification; Problems in Plant Taxonomy

3. Modern Trends in Plant Taxonomy 81-108

Periods of Plant Taxonomy; Morphology and Classification of Plants; Palynological Investigations; Embryological Tools of Taxonomy; Anatomical Tools of taxonomy; Chemotaxonomy and Serology; Paleobotany and Plant Taxonomy; Phylogenetic Works; Molecular Biology and Taxonomy; Diversity and Adaptation; Ecotaxonomy; Cladistic Analysis; Host-parasite Relationships; Emerging Trends

4. Classification of Angiosperms 109-144

Types of Classification; Biosystematics; Bentham and Hooker's Classification of Plants; Dicot Families; Monocot Family

5. Taxonomic Naming of Angiosperms 145-174

Common Names; Scientific (Latin) Names; Taxonomic Hierarchy; Families; Species, Subspecies and Varieties; Taxonomy, Systematics and Nomenclature; Type Specimens; International Code of Botanical Nomenclature; Reasons of Changing Plant Names; Nomenclature for Cultivated Plants; Classification Philosophy

6. Taxonomic Classification of Wild Plants 175-196

Rationales for Plant Taxonomy; Wild Plants—Species Concepts; Peculiarities of Wild Plants Classification

7. Chemotaxonomy of Plants 199-220

Principles of Chemotaxonomy; Taxonomic Value of Chemical Characters; Limitations of Chemical Characters

8. Angiosperms: Phylogeny and Systematics 221-262

Phylogenetic tree; Constructing the Phylogenetic tree of Angiosperms; Phylogenic Diversification of Angiosperms; Problems and Prospects; Systematics; Applications of Phylogenetic Studies

9. Morphological Features of Angiosperms 263-292

General Features; Root System; Stem; Leaf

Bibliography 293-295

Index 296-297
