v

Preface

vii

1. General Microbiology

1

Understanding Microbes, 1; The Three Phases of Microbiology, 3; Microbial Tree of Life, 6; Tree of Life or Network (Web) of Life?, 7; Microbial Phylogeny and Evolution, 8; Self-organization Processes in Biology, 9; The Eukaryotic Cell, 9; Cellular Microbiology, 13; The Complexity Pyramid, 15; The Irreducible Nature of Eukaryotic Cells, 16; Eukaryote Evolution, 20; Microbial Diversity, 21; Biodiversity of Bacteria-Taxa-area Relationship, 23; Novel Marine Microbes, 24; Mammalian Microbiota, 25; Gut (Intestinal) Bacteria, 26; The Human Microbiome, 29; Human Microbiome Project (HMP), 30; The Creativity of Symbiosis, 31; Minimal Genome Needed for Symbiosis, 33; The Species Concept for Prokaryotes, 34; Microbial Forensics, 36; Green Fluorescent Protein as a Molecular Lantern, 37.

2. Gene Transfer and Gene Swapping in Bacteria

41

*Introduction, 41; Gene Swapping, 43; Gene Transfer Among Bacteria in Natural Environments, 45; Transformation, 46; Plasmid Transformation, 46; Conjugation, 48; Mechanisms of Conjugation, 48; Transduction, 51; Types of Transduction, 53; Factors Influencing Transduction in the Environment, 54; Far-Flung Gene Transfers in Nature, 55; Recombination and Clonality, 56; The Smart Bacteria: Cognition and Natural Genetic Engineering, 58; Horizontal Gene Transfer (HGT) and Microbial Relationships, 64; Horizontal Gene Transfer-Direct Visualization, 68; Lateral Gene Transfer and Microbial Systematics, 70; *Agrobacterium tumefaciens*-The Crown Gall Bacterium, 72.*

3. Nanobiology: Viruses as Nano-organisms	75
<i>Introduction, 75; Structure and Organization, 77; Viral Quasispecies, 81; Redefining Virology, 83; Bacteriophages, 85; Genomic Diversity in Bacteriophages, 86; Viruses as Vectors for Gene Transfer, 87; RNA Virus Vectors, 88; Nuclear Import and Export in Influenza Virus Infection, 90; DNA Shuffling by Viral Vectors, 91; Infectious Viral RNAs (Reverse Genetics), 92; Large RNA Virus Genome as Artificial Bacterial Chromosome, 93; Antiviral Therapy—Bacteriophages as Antibiotics?, 94; Viruses and the Cellular DNA Damage Response, 97; Giant Viruses, 102; Aggresomes and Viroplasm, 104; Genetic Exchange Among Terrestrial Bacteriophages, 105; Tethering HIV-1 Virus, 107; HIV-AIDS Drugs, 108; Epistasis in RNA Viruses, 109; Interferon, 110; Viral Vectors for Protein Production in Insects, 110.</i>	
4. The Archaea and Extremophilic Microorganisms	113
<i>Hyperthermophilic Archaea, 114; Thermoacidophilic Methanotrophy, 115; Cell Division, 116; DNA Replication, 117; Replication Origins, 118; Archaeal Metabolism in Deep Ocean, 120; Archaea in the Marine Nitrogen Cycle, 122; Thermoacidophilic Archaeon from Deep-sea Hydrothermal Vents, 123; Acidophilic Microorganisms, 124; Upper Temperature Limit for Life, 127; Life in Hydrothermal Vents, 128; Plant/Fungal Symbiosis and Thermotolerance, 130.</i>	
5. Microbial Morphology and Physiology	132
<i>Bacterial Cell Walls and Surface Structures, 132; Visualizing Bacterial Cell Walls and Biofilms, 135; DNA Versus Membrane in Bacillus, 135; Use of Light by Bacterial Protein to Power Flagella, 136; Magnetotactic Bacteria (MTB) and Magnetosomes, 136; Bacterial Communication and Nanovesicles, 137; Bacterial Caveolae, 137; Bacterial Chemotaxis, 139; Compensatory Adaptation in Escherichia coli, 140; Bacterial Suicide Through Stress, 142; Quorum Sensing in Gram-negative Bacteria, 143; Non-coding Regulatory MicroRNAs, 145; The Functome, 147; Bacterial Proteomes, 148; Functional Versatility of Agrobacterium VirE2, 150; Noncultured Microbes, 151; Gene-expression Sorting of Metagenome Libraries, 152; Designing a Bacterial Signalling Network, 153; Survival of Bacterial Spores, 153; Humanizing Yeast for Producing Sialylated Glycoproteins, 155; Dimorphism in Yeast, 156; Lifespan in Yeast, 157; Fungi for Weed Control in Crop Fields, 158; Sex Life of Candida albicans, 159; Biological Nitrogen Fixation—Ecological Dimensions, 161; Rhizobial Systematics, 165; Carbon Fixation Pathways in Bacteria and Archaea, 166; Bacterial Source Tracking, 169.</i>	
6. Microbes, Infectious Disease and Antibiotics	171
<i>Introduction, 171; Microbial Virulence, 174; A Virulent Bacterial Pathogen: Response to Light, 180; Listeria Infections, 181; Biological Control of Plant Pathogens, 183; Burkholderia pseudomallei—A Bacterial Time Bomb, 183; Antibiotic Resistance in Bacteria, 185; Evolution of Pathogenesis in Bacteria,</i>	

186; Pathogenicity Islands, 188; Bacterial Antibiotic Resistome, 190; Microcosm, Life and *E. coli*, 191; Combating Antibiotic Resistant Bacteria, 192; Infection of Eukaryotic Cells by *Escherichia coli*, 193; Bacterial Interactions with Eukaryotic Hosts, 194; Ecofriendly Microbes for Insect Pest Control, 196; Mutasynthesis for Drug Discovery, 197.

7. Marine Microorganisms 200

Marine Microorganisms, 200; Microbial Census in the Sea, 200; Biogeography of Microbial Communities in a Model Ocean, 202; Microbial Life in the Deep Sea, 203; Rare Bacteria in the Marine Biosphere, 207; Deep-Sea Microbes: *Photobacterium profundum*, 208; Symbiotic Bacteria in Deep Sea Hydrothermal Vents, 210; Large Sulfur Bacteria and the Formation of Phosphorite, 211; Marine Microbial Diversity and Drug Discovery, 212.

8. Microbial DNA, Genes and Genomes 216

Marine Microbial DNA, 216; Role of Extracellular DNA in Deep-Sea Ecosystem Functioning, 218; Single-molecule DNA Sequencing, 219; The Micro-Petri Dish for High-throughput Screening of Microorganisms, 220; Toxin-Antitoxin Gene Pairs, 221; Microbial Genomes, 226; Optimal Genome Size in Bacteria, 229; Simple Sequence Repeats in Genomes, 230; Trait to Gene, 231; Streamlined Genome of a Marine Bacterium, 231; Phylogenetic and Bacterial Genomes, 233; Cyanobacterial Genome and the Origin of Photosynthesis, 235; Genome of an Industrially Important Fungus, 236.

9. Microbial Cooperation, Mats and Biofilms 239

Microbial Mats, 239; Cyanobacterial Hyperscums, 240; Methanogenesis in Hypersaline Environments, 242; Oxygenic Photosynthesis and N₂ Fixation in Marine Microbial Mats, 243; Nonphototrophic Sulfide-Oxidizing Bacteria, 244; Medical Biofilms, 247; Signalling among Bacteria in Biofilms, 252; Bacterial Flagellar Motors for Biofilms, 253; Social Evolution in Microbial Biofilms, 254; Yeast Biofilm, 256; Quorum-sensing: Microbial Communication, 256; Cooperation in Bacteria, 259; Bilingual Bacteria, 261.

10. Microalgae and Protists 263

Introduction, 263; The Kingdoms of Eukaryotes, 264; Opisthokonta, 267; Biodiversity of Eukaryotic Microbes, 267; Modern Eukaryotic Phytoplankton, 270; Plankton Fluorescence and Ocean Plant Health, 271; Oceanic Productivity and Pollution, 271; Diversity of Small Eukaryotes in Deep-Sea Plankton, 272; Gliding Motility, 274; Diatoms, 274; Biomonitoring with Diatoms, 276; Adaptive Response to Toxic Agents, 277; Horizontal Gene Transfer in Eukaryotic Algae, 280; Algae as Ecosystem Engineers, 282; Algal Blooms in Lakes, Ponds and Estuaries, 283.

11. Environmental Microbiology**285**

Introduction, 285; *Ecological Diversity in the Bacterial World*, 287; *Assessing Microbial Communities in Different Environments*, 289; *Syntrophic Communities of Bacteria*, 290; *Role of Microbes in Aquatic Ecosystems*, 292; *Bacterial Populations of Urban Aerosols*, 293; *Microbes and Geochemistry*, 294; *Biodegradation*, 295; *The Evolution of Earth's Atmosphere*, 297; *Environmental Microbiology-on-a-Chip*, 297; *Impact on Studies of Microbial Diversity*, 299; *The 'K'-Selected Oligophilic Bacteria*, 300; *Temperature Excludes N₂-fixing Heterocystous Cyanobacteria in the Tropical Oceans*, 300; *Microbial Biogeography*, 302; *Geomicrobiology*, 303; *Shewanella for Bioremediation*, 305; *Bacterial Respiration of Minerals*, 306; *Thermophilic Sulphate-reducing Bacteria and Mild Steel Corrosion*, 308; *Bacteria in Nanofabricated Landscapes*, 310; *Fishing for Microbes*, 311; *Microbial Ecology for Management of Environmental Biotechnology Processes*, 313; *The Microbial Biodegradation and Biotransformation Gene Pool*, 317.

12. Microbiology from the Bottom Up**320**

Introduction, 320; *Tinkering with Biological Systems*, 321; *Metabolic Engineering—First Autonomous Synthetic Life Form*, 323; *Molecular Prodigality*, 324; *Exploitable Microbiology—Synthetic Biology for Microbial Biofuels*, 325; *Microbial Surface-display for Environmental Remediation and Biofuels Production*, 327; *Microbial Fuel Cells*, 329; *Potential Applications*, 331.
