## Genetic Engineering

|                                                                |     |
|----------------------------------------------------------------|-----|
| <i>Preface</i>                                                 | v   |
| 1. Genetic Engineering                                         | 1   |
| 2. Application of Genetic Modification Technology              | 35  |
| 3. Industrial Applications of Biotechnology                    | 63  |
| 4. Potentials of Science and Technology                        | 103 |
| 5. Evaluation of Modern Biotechnology                          | 119 |
| 6. Governance of Modern Biotechnology                          | 159 |
| 7. Intellectual Property Rights for Agricultural Biotechnology | 205 |
| 8. Attitudes Towards Biotechnology                             | 233 |
| 9. Product Regulations and Ethics                              | 247 |
| <i>Bibliography</i>                                            | 270 |
| <i>Index</i>                                                   | 272 |

– *Plasmids*: small, autonomously replicating circular pieces of bacterial DNA which often carry antibiotic-resistance genes.

– *Bacteriophages (phages)*: viruses which infect bacteria.
