

Contents

Abbreviations	xi
1 Introduction to Nanotechnology	1
1.1 Introduction	1
1.2 Definition of Nanotechnology	6
1.3 Composition of the Book	8
References	9
2 Physicochemical Characterization of Nanoparticles	11
2.1 Introduction	11
2.2 Physicochemical Characterization	11
2.2.1 Size and Size Distribution	12
2.2.2 Surface Morphology	16
2.2.3 Surface Charge	18
2.2.4 Stability	19
2.2.5 Sterility	20
References	22
3 <i>In Vitro</i> and <i>In Vivo</i> Characterization of Nanoparticles	27
3.1 Introduction	27
3.2 <i>In Vitro</i> Characterization of Nanoparticles	27
3.2.1 Binding and Uptake	27
3.2.2 Cytotoxicity	33
3.3 <i>In Vivo</i> Characterization	36
3.3.1 Protein Binding to Nanoparticles	37
3.3.2 Factors Affecting Protein Binding to Nanoparticles	38
3.3.3 Influence of Protein Binding on Biodistribution of Nanoparticles	39

3.4	Conclusion	40
	References	41
4	Concept and Barriers to Gene Silencing	47
4.1	Introduction	47
4.2	Basic Principle and Mechanism of RNAi	48
4.3	Barriers to siRNA Delivery	50
4.3.1	<i>In Vitro</i> Barriers	51
4.3.2	<i>In Vivo</i> barriers	53
4.4	Conclusions	55
	References	55
5	Nanoparticles-Mediated Targeted siRNA Delivery	61
5.1	Introduction	61
5.2	Strategies for Targeted siRNA Delivery	63
5.2.1	Antibodies	63
5.2.2	Peptides	65
5.2.3	Transferrin	66
5.2.4	Other Targeting Ligands	67
5.3	Conclusions	68
	References	68
6	Polymers for siRNA Delivery	71
6.1	Introduction	71
6.1.1	Advantages and Limitations of Nanoparticles	71
6.2	Present Clinical Scenario	74
6.3	Conclusions	75
	References	76
7	Chitosan	79
7.1	Introduction	79
7.2	Parameters Affecting siRNA Delivery Efficiency of Chitosan-based Nanoparticles	80
7.2.1	Chitosan Molecular Weight and Concentration	81
7.2.2	Degree of Deacetylation	82
7.2.3	N/P ratio	82
7.2.4	Chitosan Salt Form	83
7.2.5	pH of the System	83

7.2.6	Presence of Serum	85
7.2.7	Methods of siRNA Association	85
7.3	<i>In Vitro</i> and <i>In Vivo</i> Applications of Chitosan/siRNA Complexes	86
7.4	Future Perspectives	88
7.5	Conclusions	89
	References	90
8	Polyethylenimine	93
8.1	Introduction	93
8.2	<i>In Vitro</i> and <i>In Vivo</i> Application of PEI in siRNA Delivery	96
8.3	Degradable PEI for siRNA Delivery	103
8.4	Future Perspectives	104
8.5	Conclusions	105
	References	105
9	Poly-L-lysine	109
9.1	Introduction	109
9.2	<i>In Vitro</i> and <i>In Vivo</i> Applications of PLL in siRNA Delivery	110
9.3	Future Perspectives	116
9.4	Conclusion	116
	References	117
10	Atelocollagen	119
10.1	Introduction	119
10.2	Atelocollagen-Mediated siRNA Delivery	120
10.3	Future Perspectives	125
10.4	Conclusions	126
	References	126
11	Protamine	129
11.1	Introduction	129
11.2	Protamine-siRNA Complexes for Gene Silencing	130
11.3	Future Perspectives	135
11.4	Conclusion	135
	References	136

12 Dendrimers	139
12.1 Introduction	139
12.2 Applications of Dendrimers in siRNA Delivery	141
12.2.1 Poly(Amidoamine) Dendrimers	141
12.2.2 Poly(Propylenimine) Dendrimers	148
12.2.3 Carbosilane Dendrimers	149
12.3 Future Perspectives	150
12.4 Conclusions	151
References	151
13 Cyclodextrin	155
13.1 Introduction	155
13.2 Cyclodextrins for siRNA Delivery	156
13.3 Future Perspectives	162
13.4 Conclusions	162
References	163
14 Poly (D, L-Lactide-co-Glycolide)	165
14.1 Introduction	165
14.2 PLGA for siRNA Delivery	167
14.3 Future Perspectives	173
14.4 Conclusions	174
References	174
15 Nanomaterials for siRNA Delivery	177
15.1 Introduction	177
15.2 Gold Nanoparticles	177
15.2.1 Conjugates Formed via Thiol Chemistry	178
15.2.2 Complexes Formed via Electrostatic Interactions	181
15.3 Mesoporous Silica Nanoparticles	183
15.4 Carbon Nanotubes	185
15.5 Future Perspectives	189
15.6 Conclusions	189
References	190
Index	193
