1 Detecting Mosaic Structures in DNA Sequence	
Alignments	1
Dirk Husmeier	
1 Introduction	1
2 A Brief Introduction to Phylogenetics	2
2.1 Topology and parameters of a phylogenetic tree . . .	2
2.2 DNA sequences and sequence alignments	4
2.3 A mathematical model of nucleotide substitution . .	5
2.4 Likelihood of a phylogenetic tree	9
3 Recombination	13
4 A One-Minute Introduction to Hidden Markov Models . .	16
5 Detecting Recombination with Hidden Markov Models . .	19
5.1 The model	19
5.2 Naive parameter estimation	20
5.3 Maximum likelihood	21
5.3.1 E-step	24
5.3.2 M-step: Optimization of the recombination parameter	25
5.3.3 M-step: Optimization of the branch lengths	25
5.3.4 Reason for not optimizing the prior probabilities	25
5.3.5 Algorithm	26
6 Test Data	27

6.1	Synthetic data	27
6.2	Gene conversion in maize	27
6.3	Recombination in Neisseria	28
7	Simulation	29
7.1	Synthetic DNA sequence alignment	31
7.2	Gene conversion in maize	32
7.3	Recombination in Neisseria	32
8	Discussion	32
	References	34
2	Application of Statistical Methodology and Model Design to Socio-Behaviour of HIV Transmission	37
	Jacob Oluwoye	
1	Introduction	37
2	Deductive and Inductive Approach	39
3	Statistical Methodology and Model Design	40
3.1	Five steps in model building	42
3.2	Model building approach	43
4	Adaptation of "Seldom Do" Models to Human Behaviour	44
5	The Discrete Choice Modelling	47
6	Application of the Use of Logit Specification to Socio-Behaviour of HIV Transmission	52
6.1	Binary choice models	52
6.2	The linear probability model	53
6.3	The logit model	54
7	Conclusion	56
8	General Comments	56
	Acknowledgements	57
	References	57
	Bibliography	58
3	A Stochastic Model Incorporating HIV Treatments for a Heterosexual Population: Impact on Threshold Conditions	59
	Robert J. Gallop, Charles J. Mode and Candace K. Sleeman	
1	Introduction	59
2	Parameters for a Heterosexual Population	61

3	Latent Risks for Transitions in Population	64
4	Stochastic Evolutionary Equations	70
5	Form of the Embedded ODE for Given Parameters	72
6	Determination of the Spread of the Disease	74
7	Results of Monte Carlo Simulation Experiments	75
8	Discussion and Summary	80
	References	82
4	Modeling and Identification of the Dynamics of the MF-Influenced Free-Radical Transformations in Lipid-Modeling Substances and Lipids	 85
	J. Bentsman, I. V. Dardynskaia, O. Shadyro, G. Pellegrinetti, R. Blauwkamp and G. Gloushonok	
0	Introduction	85
1	Objectives and Motivation	89
2	Framework for Fitting Mathematical Models to the Experimental Data	90
3	Modeling and Identification of the MF-Influenced Oxidation of Hexane	92
3.1	Experimental part	92
3.2	Reaction scheme and differential equations, describing the process of photo-induced oxidation of hexane	95
3.3	Localization of the influence of magnetic field in the system description	99
3.4	Development of the model with dependence on magnetic field	102
3.5	Procedures for identification of the reaction dynamics under MF influence using the flow-through experimental data	104
3.6	Identification results	113
3.7	Validation of the nonlinear mathematical model and the region of model validity	113
4	Modeling and Identification of the MF-Influenced Oxidation of Linolenic Acid	114
4.1	Experimental part	114

4.2	Reaction scheme and differential equations, describing the process of photo-induced oxidation of linolenic acid	115
4.3	Identification of the reaction dynamics under MF influence using the flow-through experimental data	122
4.4	Sensitivity of the concentration growth rates to magnetic field strength in the batch and flow-through experiments	128
4.5	Development of nonlinear equation constants and dependence on magnetic field	132
5	Problems	133
	Acknowledgement	133
	References	133
5	Computer Simulation of Self Reorganization in Biological Cells	137
	Donald Greenspan	
1	Biological, Physical and Computational Preliminaries . . .	137
1.1	Introduction	137
1.2	Classical molecular mechanics	137
1.3	The computer algorithm	138
2	Supercomputer Examples	139
2.1	A morphogenesis simulation	139
2.2	Other examples	145
	References	147
6	Modelling Biological Gel Contraction by Cells: Consequences of Cell Traction Forces Distribution and Initial Stress	149
	S. Ramtani	
1	Introduction	149
2	The Mechanocellular Model	151
3	Model Predictions and Discussion	155
3.1	Uniaxial cell traction force effect	155
3.2	Initial stress effect	160
	References	164

7	Peristaltic Transport of Physiological Fluids	167
	J. C. Misra and S. K. Pandey	
1	Phenomena Associated with Peristalsis	168
2	Physiological Systems Associated with Peristalsis	169
2.1	Digestive system	169
2.2	Oesophagus	169
2.3	Stomach	170
2.4	Small intestine	171
2.5	Ureter	173
2.6	Vas deferens	174
2.7	Experimental investigations on peristalsis	174
3	Theoretical Studies on Peristaltic Transport	177
3.1	Newtonian flows	177
3.2	Non-Newtonian flows	180
3.3	Non-stationary initial flows	182
3.4	Two-phase flows	183
3.5	Two-layer flows	186
4	Flows through Tubes of Non-Uniform Cross-Section	188
5	Numerical Investigations	189
	References	190
8	Mathematical Modelling of DNA Knots and Links	195
	J. C. Misra and S. Mukherjee	
1	Introduction	195
2	Mathematical Background	199
2.1	Topological tools for DNA analysis	199
2.2	Definitions	201
2.3	2-string tangles	202
2.4	Rational tangle	203
2.5	4-plats	205
2.6	Classification of 4-plats	206
3	Biological Statement and Assumptions	208
4	Tangle Model Assumptions	209
4.1	Other substrates	211
5	Site-Specific Recombination	211
6	Processive Recombination	214
7	Useful Facts and Theorems About Tangles	215
8	Model for the Tn3 Resolvase	218

9	Model for the Xer Recombinase and Topoisomerases III and IV	219
9.1	Biological model for recombinases and topoisomerases	220
9.2	Biological model (unknotted substrates)	220
9.3	Biological model (catenated substrates)	220
9.4	Tangle equations for unknotted substrates	220
9.5	Tangle equations for catenated substrates	221
9.6	Problems	221
9.7	Results	221
10	Modelling Conclusions	222
	Acknowledgement	223
	References	224
9	Using Monodomain Computer Models for the Simulation of Electric Fields During Excitation Spread in Cardiac Tissue	225
	G. Plank	
1	Introduction	225
2	Physiological Background	228
2.1	Properties of cardiac cells	228
2.2	The action potential	231
3	Modelling the Membrane Kinetics	233
4	Modelling of Action Potential Propagation in Cardiac Tissue	237
4.1	Core conductor model	237
4.1.1	Electrical parameters of a cylindrical fiber	237
4.1.2	Electrical model of a single fiber	238
4.1.3	Cable equations	240
4.1.4	Linear subthreshold conditions	242
4.1.5	The propagating action potential	244
4.1.6	Finite length cables	247
4.2	Monodomain models	250
4.2.1	One-dimensional fiber	250
4.2.2	Multi-dimensional tissue	251
4.2.3	Discontinuous monodomain models	253
4.3	Numerical solution of monodomain equations	253
4.3.1	Spatial discretization of equations	255
4.3.2	Monodomain integration methods	258
4.3.3	Advanced techniques	260

5	Recovery of Extracellular Potentials and Fields	262
5.1	Source-field concept	263
5.2	Volume conductor fields of cylindrical fibers	264
6	Volume Conductor Potentials and Fields during Depolarization	267
6.1	Two-dimensional tissue model	267
6.2	Spatial source distribution at the central fiber	268
6.3	Time course of intra- and extracellular signals	269
6.4	The electric field evoked by an elliptic wavefront	270
	Acknowledgments	271
	References	271
10	Flow in Tubes with Complicated Geometries with Special Application to Blood Flow in Large Arteries	279
	Girija Jayaraman	
0	Introduction	279
0.1	Wall shear stress and atherosclerosis	281
0.2	Arterial stenosis	281
0.3	Entry flows	282
0.4	Influence of curvature	282
0.5	Artefacts of catheters	285
1	Mathematical Formulation	287
1.1	Flow geometry	287
1.2	Co-ordinate system	287
1.3	Governing equations of motion	288
1.4	Boundary conditions	289
2	Methods of Solution	290
2.1	Perturbation analysis	290
2.2	Numerical approach	291
3	Discussions	293
3.1	Pressure drop and impedance	294
3.2	Wall shear stress	299
3.3	Flow behavior	300
4	Concluding Remarks	301
	References	302
