Preface	vii
List of Contributors	xix
I Functional Properties of Biological Surfaces	1
Chapter 1. Biomimetics of Skins	3
<i>Julian F. V. Vincent</i>	
Abstract	3
1. Introduction	3
2. Surface Hardening	6
3. Strain Sensors	8
4. Water Repellence	10
5. Color	12
6. Envoi	13
References	13
Chapter 2. The Shark Skin Effect	17
<i>Amy W. Lang</i>	
Abstract	17
1. Introduction	17
2. Shark Skin Structure	19
3. Drag Reduction	22
3.1. Marine Animal Locomotion	22
3.2. Skin-Friction Reduction	24
3.3. Separation Control	27
4. Drag-Reducing Capabilities of the Skin on Fast-Swimming Sharks	30
5. Summary With Technological Applications	36
References	38

Chapter 3. Lotus Effect: Superhydrophobicity and Self-Cleaning	43
<i>Michael Nosonovsky and Edward Bormashenko</i>	
Abstract	43
1. Introduction	43
2. Superhydrophobic Surfaces in Nature	44
2.1. Leaves of Water-Repellent Plants	45
2.2. Insect and Birds Wings	47
2.3. Insect Legs	47
3. Modeling Superhydrophobicity	49
3.1. Wetting of Flat and Rough Surfaces: The Governing Equations	49
3.1.1. The Young equation	49
3.1.2. The Wenzel and Cassie equations	51
3.2. Contact Angle Hysteresis	53
3.2.1. Definition of contact angle hysteresis	53
3.2.2. Empirical models of contact angle hysteresis	54
3.2.3. Simulation and semi-empirical models	55
3.3. Stability and the Cassie–Wenzel Transition	56
3.3.1. Vibration-induced transition	56
3.3.2. Transition during evaporation	59
3.3.3. Reversible superhydrophobicity	59
3.4. Role of Hierarchical Roughness	60
3.5. Dynamic Effects: Bouncing Drops	60
3.6. A Drop on an Inclined Surface	62
4. Self-Cleaning	63
5. Biomimetics: Artificial Superhydrophobic Surfaces	64
5.1. Micropatterned Surfaces Produced by Lithography and Other Methods	64
5.2. Evaporation Induced Honeycomb Polymer Surfaces	68
5.3. Commercially Available Lotus-Effect Products	69
6. Closure	72
References	72

Chapter 4. The Moth-Eye Effect — From Fundamentals to Commercial Exploitation 79

Andreas Gombert and Benedikt Bläsi

Abstract	79
1. Introduction	79
2. Theory	82
2.1. Effective Medium Theories (EMTs) for Subwavelength Gratings	83
3. Design Considerations	87
4. Manufacturing	92
4.1. Origination by Interference Lithography	93
4.2. Choice of Laser and Photoresist	95
4.3. Replication	96
5. Applications	97
6. Summary	99
References	100

Chapter 5. The Gecko Effect: Design Principles of the Gekkotan Adhesive System Across Scales of Organization 103

Anthony P. Russell and Megan K. Johnson

Abstract	103
1. Introduction	103
2. The Gecko Effect — How is Attachment Achieved?	106
3. Structure of the Setal Fields and the Anatomical Hierarchy on Which They Depend	113
4. Performance Aspects — Real-World Functional Demands in Relation to the Gecko Effect	119
5. Biomimetics — The Application of Design Principles to Exploitation of the Gecko Effect	124
6. Conclusions	126
References	126

II Characterization of Surfaces	133
Chapter 6. Micro- and Nano-Scopic Observation of Biological Surfaces	135
<i>Zhaojie Zhang and Qun Ren</i>	
Abstract	135
1. Introduction	135
2. Surface Observation Using Optical Microscopy	137
2.1. Light Microscopy	137
2.2. Laser Scanning Confocal Microscopy (LSCM)	140
3. Surface Observation Using Scanning Probe Microscopy (SPM)	142
3.1. AFM in Biological Surface Study and Topographic Analysis	144
3.2. Combination of AFM With Confocal Microscopy	145
4. Surface Observation Using Electron Microscopy	147
4.1. SEM of Biological Surface	147
4.2. Environmental SEM (ESEM) of Wet Biological Samples	149
4.3. TEM Observation of the Inside of the Biological Surfaces	150
References	152
Chapter 7. RIMAPS and Variogram Characterization of Micro-Nano Topography	155
<i>Néstor O. Fuentes and Eduardo A. Favret</i>	
Abstract	155
1. Introduction to RIMAPS and Variogram Analysis	155
1.1. Basic Concepts of RIMAPS Technique	156
1.1.1. Theory	156
1.1.2. Examples of using RIMAPS for ideal geometrical forms	156
1.1.3. Characterization of simple experimental surfaces using RIMAPS	159
1.2. Basic Concepts of Variogram Method	162
1.2.1. Variogram analysis	162
1.2.2. Examples of using Variogram for ideal geometrical forms	162

1.2.3.	Characterization of simple experimental surfaces using Variogram	165
2.	Micro-Nano Topography Characterization	167
2.1.	Biological Surfaces	167
2.2.	Technological Surfaces	171
3.	Conclusions	175
	References	177
Chapter 8. Capillary Phenomena		181
<i>Gerardo Callegari and Adriana Calvo</i>		
	Abstract	181
1.	Introduction	181
2.	Wetting Properties: Surface Energy and Tension	184
2.1.	Molecular Interactions	185
2.2.	Adhesion and Cohesion	186
2.3.	Wettability and Contact Angle	187
2.4.	Liquid vs Solid Surface Energy: Measurement Techniques	189
2.4.1.	Drop weight or drop detachment	190
2.4.2.	Shape of the droplet	191
2.4.3.	Ring	191
2.4.4.	Fiber or plate	191
2.5.	Components	192
2.6.	Hysteresis of the Contact Angle	195
2.6.1.	Classical approach: roughness and chemical heterogeneities	195
2.6.2.	Metastable configurations	196
2.6.3.	Vibrations and the global energy minimum (GEM)	196
2.6.4.	Other sources of hysteresis: smooth and homogeneous surfaces	197
3.	Capillarity	198
3.1.	Dynamic Contact Angle	202
3.1.1.	Hydrodynamic model	204
3.2.	Molecular Approach	209
4.	Liquid Films	211
4.1.	Film Formation	211
4.2.	Stability Criteria	213

4.2.1.	Nanoscope films ($b < 10$ nm) and spinodal dewetting	214
4.2.2.	Macroscopic films	214
4.3.	Dewetting of Planar Films	215
4.4.	Cylindrical Films	218
4.4.1.	Rayleigh instability	219
4.5.	Annular Films Dewetting	221
References		223
Chapter 9.	Chemical Characterization of Biological and Technological Surfaces	233
	<i>Peter Kruse</i>	
Abstract		233
1.	Introduction	234
2.	Sample Preparation	236
2.1.	Freezing	237
2.2.	Polishing	237
2.3.	Sputtering	238
3.	Optical Spectroscopies (Photon Based)	238
3.1.	Photon Sources	239
3.2.	Infrared Spectroscopy	240
3.3.	Surface Plasmon Resonance (SPR)	241
3.4.	Raman Spectroscopy	242
3.5.	Second Harmonic and Sum Frequency Generation (SHG and SFG)	244
3.6.	X-ray Absorption Spectroscopy (XAS, NEXAFS, STXM, PEEM)	245
4.	Electron Spectroscopies	248
4.1.	UV Photoelectron Spectroscopy (UPS)	250
4.2.	X-ray Photoelectron Spectroscopy (XPS, ESCA)	251
4.3.	Auger Electron Spectroscopy (AES, SAM, PAES)	255
4.4.	X-ray Fluorescence (EDS, EDX, WDX, XRF)	256
4.5.	Electron Energy Loss Spectroscopy (EELS)	258
5.	Particle Beams	258
5.1.	Small Angle Neutron Scattering (SANS)	259
5.2.	Positron Spectroscopy	259
5.3.	Rutherford Backscattering Spectrometry (RBS)	260
5.4.	Medium Energy Ion Scattering (MEIS)	261

5.5.	Nuclear Reaction Analysis (NRA)	261
5.6.	Particle-induced X-ray Emission (PIXE)	262
5.7.	Mass Spectrometry	264
5.7.1.	Dynamic secondary ion mass spectrometry (SIMS)	264
5.7.2.	Static secondary ion mass spectrometry (SIMS)	265
5.7.3.	Self-assembled monolayer desorption ionization mass spectrometry (SAMDI)	267
6.	Proximity Probes	268
6.1.	Elastic and Inelastic Tunneling Spectroscopy	268
6.2.	Force and Chemical Force Spectroscopy	269
6.3.	Scanning Electrochemical Microscopy (SECM)	270
6.4.	Locally Enhanced Raman Effect	270
6.5.	Nearfield Optical Methods	271
7.	Summary	271
	References	272

III Methods for Modifying Man-Made Surfaces 279

Chapter 10. Laser Interference Metallurgy 281

Frank Mücklich and Andrés Fabián Lasagni

Abstract	281
1. Introduction	281
2. Interference Principle	283
3. Design of Periodical Structures	286
4. Laser Interference Patterning System	288
5. Thermal Simulation	289
6. Practical Examples	290
6.1. Topographic Design in Bulk Metallic Substrates	290
6.2. Microstructure Design in Thin Metallic Films	294
6.2.1. Grain-size distribution and texture	294
6.2.2. Long-range order intermetallic formation	297
6.3. Patterning of Polymeric Substrates	298
6.4. In Vitro Cell Response of Micropatterned Polymer Surface	301
References	303

Chapter 11. Electrodeposition — Fundamental Aspects and Methods	309
<i>Stanko R. Brankovic</i>	
Abstract	309
1. Introduction	309
2. Electrodeposition Kinetics	310
3. Overpotential Co-Deposition (OPCD) — Electrodeposition of Alloys	312
4. Underpotential Deposition (UPD)	314
5. Underpotential Co-Deposition (UPCD)	317
6. Metal Deposition by Galvanic Displacement of UPD ML (MLS)	319
7. Spontaneous Noble Metal on Noble Metal (NMonNM) Deposition	322
8. Pulse Current Deposition	324
9. Additive Effect	326
10. Specific Aspects of Electrodeposition into Nanotemplate Electrodes	331
11. Electrodeposition vs Surface Hydrophobicity	332
References	335
Chapter 12. Surface Modification by Plasma-Based Processes	343
<i>Evangelina De Las Heras, Gabriel Ybarra, Inigo Bracenas and Pablo Corengia</i>	
Abstract	343
1. Introduction	343
2. Classification of Plasmas	344
2.1. DC Discharges	345
2.2. RF Discharges	346
3. Modification of Functional Surface Properties by Plasma-Based Processes	346
3.1. Plasma Grafting and Polymerization	348
3.1.1. Grafting	349
3.1.2. Plasma polymerization	350
3.2. Physical Vapor Deposition (PVD) and Chemical Vapor Deposition (CVD)	353
3.3. Ion Beam Processes	354
4. Biomimetics	354

5.	Applications	356
5.1.	Surfaces with Improved Mechanical Properties	356
5.2.	Antireflective Surfaces	358
5.3.	Hydrophobic and Hydrophilic Surfaces	360
5.4.	Biomolecule Immobilization	361
5.5.	Biosensors	361
5.6.	Sterilization	363
5.7.	Antimicrobial Surfaces	364
5.8.	Interaction with Living Tissue	366
5.9.	Therapies and Drug Release	368
5.10.	Treating Living Organisms	370
6.	Conclusions	370
	References	371
