<i>Preface</i>	v
----------------------	---

Chapter 1

More than a Century of Nobel Prizes	1
Alfred Nobel and his life	2
Academies and prizes	5
The will	10
Implementation of the will	14
The selection process	17
The awarding institutions and the prizes	22
The secrecy of the prize selection process	23
The number of prize recipients	24
The nationality of Nobel Prize recipients	26
The awardee and the prize	28
There is no Nobel Prize in economics	32
The enigmatic concept of discovery	34
Coda — Alfred Nobel's surprise	38

Chapter 2

Serendipity and Nobel Prizes	39
The origin of "serendipity"	41
Horace Walpole	42
Serendipity and scientific endeavor	44
Serendipitous events in science	47
The magic of invisible rays	48

Patterns of background radiation	49
The "vital force" of Nature dismissed	52
Helpful students' mistakes.....	53
From observational to evidence-based medicine	54
The paradigm example of a serendipitous finding?	55
The discovery of infectious agents in a remarkable context.....	57
"Serendipity" — From arcane to en vogue.....	59
What's in a word?.....	60
The capricious nature of the scientific process.....	61
Coda — Minute infectious agents.....	64

Chapter 3

Nobel Prizes and the Emerging Virus Concept.....	66
Nobel Prizes in the field of virology.....	68
Nobel archives and the evolving virus concept	73
The first Nobel Prize in virology: Wendell Stanley.....	74
Stanley's findings and the discussions of infectious proteins	78
Bacteriophage replication and the studies of genes	82
Animal viruses and the understanding of the nature of viruses.....	86
The final synthesis of the virus concept.....	90
A counterfactual history of virology.....	92
Virology 50 years later.....	93
Coda — Are viruses live or dead material?.....	95

Chapter 4

The Only Nobel Prize for a Virus Vaccine:	
Yellow Fever and Max Theiler	97
The disease and the epidemics.....	99
The virus and possibilities for vaccine development.....	103
Max Theiler, the experimental scientist.....	106
The first deliberations by the Nobel Committee	109
Theiler's road toward the critical discovery.....	110
Continued deliberations by the Nobel Committee.....	114
The history of viral vaccines.....	116
What is a discovery?	118
A charming encounter	122
Coda — Sven Gard's return.....	123

Chapter 5

Polio and Nobel Prizes	124
Polio epidemics in the 20th century	125
Initial attempts to produce a vaccine	127
Early deliberations by the Nobel Committee	129
Enders, viruses and cultured cells	130
Sven Gard and his role	131
Nomination of Enders in 1952	132
Nominations of Enders and collaborators in 1953 and 1954	134
The decision	136
Polio research and vaccine production	137
Why not wait for the first vaccine trials?	138
Coda — A unique contact	143

Chapter 6

Unusual Nobel Prizes in Physiology or Medicine	144
The first Nobel Prize in Physiology or Medicine	148
The enigma of Alexis Carrel	150
The rapid advance toward a Nobel Prize	150
Eternal life in cultures	152
Carrel's engagement during the two world wars	153
Did Carrel's scientific contributions motivate his Nobel Prize in 1912?	154
The importance of friendship across the Kattegat	155
The attraction of contraction	157
Powerful developments in a subfield of physiology	157
Embden never received a Nobel Prize	160
Insulin, its remarkable discovery and a much debated Nobel Prize	161
A committee in quandary	161
The awardees' reaction to the prize announcement	165
The post-prize developments of the two laureates and two non-laureates	167
Would the committee have changed its stand if it had delayed the awarding of the prize?	168
An exceptional comment by a later committee on the insulin prize	169
A Nobel Prize awarded in the midst of World War II	173
The importance of a secretary with insight	173
Prize award in the diaspora	174

A candidate who almost did not make it.....	176
DDT, a uniquely effective insecticide which fell into disrepute.....	179
DDT marches with the troops.....	179
The committee and faculty moved quickly in 1948.....	179
The future saga of DDT.....	182
Corticosteroids, another medical wonder drug.....	183
Joshua Lederberg, a rapidly recognized scientist.....	186
An inspiring nomination.....	186
The brilliant review of Lederberg's scientific contributions.....	187
The formative years in the work of the committee.....	189
Coda — Sometimes it takes time.....	194

Chapter 7

Nobel Prizes and Nucleic Acids: A Drama in Five Acts.....	195
The chemistry of the nucleus.....	197
Enter Albrecht Kossel.....	199
The eclipse of nucleic acids.....	202
The milestone discovery by Avery.....	203
The growing insight of the Committee for Chemistry.....	205
Slow appreciation by the Committee for Physiology or Medicine.....	208
The temperature of engagement increases.....	216
From the structure of viruses to the central dogma.....	223
Organic crystals unraveled and the code of life deciphered.....	230
Reading the books of life.....	234
Writing the books of life.....	237
The two final acts in the drama of the role of nucleic acids.....	240
Coda — There is still more to molecular genetics.....	244

Chapter 8

Nobel Prizes, Prions and Personalities.....	245
The encyclopedic eternal traveler.....	246
Milestones in the early studies of atypical infectious agents.....	252
A unique Nobel lecture and a remarkable extended family.....	256
A San Francisco neurologist challenged by a case of CJD.....	259
The unconventional virus is not a virus after all.....	261
An alarming epidemic of CJD in younger patients.....	264
"Neo-cannibalism" in cattle and a new form of CJD in humans.....	266

Neo-cannibalism in humans?.....	268
The mechanisms of prion diseases have a wider application.....	270
The archetype of the successful scientist.....	273
