

CONTENTS

PART ONE: *The Structure and Isolation of Plant Cell Membranes*

1. INTRODUCTION	3
References	6
2. ENDOPLASMIC RETICULUM	9
2.1. Structure and morphology	10
2.2. Markers for isolation	13
2.2.1. Redox reactions	13
2.2.2. Glycosylation reactions	16
2.2.3. Phospholipid biosynthesis	16
2.2.4. Other enzymes	17
2.3. Separation	17
References	19
3. NUCLEAR ENVELOPE	21
3.1. Structure and morphology	22
3.1.1. General aspects	22
3.1.2. Similarities to the ER	22

3.1.3.	<i>The inner surface of the NE</i>	27
3.1.4.	<i>Pore complexes</i>	28
3.2.	Markers for isolation	29
3.2.1.	<i>The nucleus</i>	29
3.2.2.	<i>The nuclear envelope</i>	30
3.3.	Separation	30
	References	32
4.	MICROBODIES	35
4.1.	Morphology	37
4.1.1.	<i>Form, size, and content</i>	37
4.1.2.	<i>Relationships to other organelles</i>	39
4.2.	Cytochemistry	39
4.2.1.	<i>The DAB method</i>	39
4.2.2.	<i>Other methods</i>	42
4.3.	Isolation	43
4.3.1.	<i>Markers</i>	43
4.3.2.	<i>Separation</i>	45
4.4.	Glyoxysome-Peroxisome transition	46
4.5.	Microbodies in algae and fungi	48
	References	49
5.	THE GOLGI APPARATUS	53
5.1.	The basic unit: The cisterna	54
5.2.	The cisternal stack	59
5.3.	The <i>cis</i> -face	62
5.4.	The <i>trans</i> -face	66
5.5.	Isolation of cisternae and dictyosomes	68
5.6.	Isolation of secretory vesicles	73
	References	76
6.	TONOPLAST AND VACUOLES	81
6.1.	Structure and morphology	82
6.2.	The origin of vacuoles	85
6.3.	Isolation	87

CONTENTS	xv
6.3.1. Tonoplast markers	87
6.3.2. Content markers	90
6.3.3. Direct isolation through homogenization	91
6.3.4. Indirect isolation via protoplasts	93
References	95
7. PLASMA MEMBRANE	97
7.1. Structure and morphology	98
7.1.1. Increase of surface area	98
7.1.2. Plasmodesmata	99
7.2. Cytochemistry	103
7.3. Markers for isolation	104
7.3.1. Enzymes	104
7.3.2. Ligand binding in vitro	107
7.3.3. Surface labeling in vivo	107
7.3.4. Sidedness of PM vesicles	109
7.4. Separation	110
References	112
8. COATED VESICLES	117
8.1. Structure and chemistry	118
8.2. Coated pits and receptor-mediated endocytosis	121
8.3. Coated vesicles (pits) in plant cells	125
8.4. Isolation from animal cells	126
8.4.1. Markers	126
8.4.2. Separation	126
8.5. Isolation from plant cells	128
References	129

PART TWO: Membranes and Particular Functions of Plant Cells

9. MICROFIBRIL SYNTHESIS AND ORIENTATION	135
9.1. What is cellulose?	136
9.2. Sites of cellulose synthesis	137

9.3.	IMPS and cellulose synthesis	137
9.4.	Microtubules and microfibril orientation	141
9.5.	Cellulose synthesis: Some chemical aspects	145
	References	147
10.	SYNTHESIS AND SECRETION OF EXTRACELLULAR MACROMOLECULES	151
10.1.	The situation in animal cells: a summary	152
10.2.	Hydroxyproline-rich glycoproteins (HRGP)	158
10.2.1.	<i>Sites of translation and transport</i>	159
10.2.2.	<i>Site of hydroxylation</i>	160
10.2.3.	<i>Site of glycosylation</i>	163
10.3.	Root cap slime	165
10.3.1.	<i>Slime composition and structure</i>	166
10.3.2.	<i>Slime biosynthesis: in vivo labeling experiments</i>	166
10.3.3.	<i>Slime biosynthesis: in vitro transferase studies</i>	168
10.4.	Cell wall matrix polysaccharides	168
10.4.1.	<i>Matrix polysaccharide biosynthesis: in vivo studies</i>	171
10.4.2.	<i>Matrix polysaccharide biosynthesis: in vitro transferase studies</i>	173
10.5.	Secretion by-passing the GA?	173
10.5.1.	<i>Glandular exudates</i>	174
10.5.2.	<i>α-Amylase secretion</i>	176
	References	184
11.	SYNTHESIS, ACCUMULATION, AND BREAKDOWN OF STORAGE PRODUCTS	193
11.1.	Reserve proteins	194
11.2.	Protein body formation in cereals	196
11.3.	Protein body formation in legumes	199
11.4.	Mobilization of protein reserves during germination	208
11.5.	Seed oils and fats	210

11.6. Lipid body formation	211
11.7. Lipid body breakdown: the origin of glyoxysomes	214
References	222
12. THE VACUOLE AND COMPARTMENTATION	229
12.1. The vacuole as a multifunctional compartment	230
12.2. Synthesis and segregation of lysosomal enzymes	232
12.3. The origin of vacuolar enzymes in plant cells	235
References	237
13. RECOGNITION PHENOMENA	241
13.1. Graviperception	242
13.1.1. <i>Sites and organelles involved in perception</i>	243
13.1.2. <i>Changes in statocyte ultrastructure resulting from gravistimulation</i>	246
13.1.3. <i>The mechanism of graviperception</i>	246
13.2. Red light perception	248
13.2.1. <i>Characteristics of phytochrome pelletability</i>	249
13.2.2. <i>Phytochrome localization in vitro</i>	250
13.2.3. <i>Phytochrome localization in situ</i>	251
13.3. Blue light perception	252
13.4. Transmission and response with auxin(s) as the signal	253
13.4.1. <i>Auxin transport</i>	254
13.4.2. <i>Auxin "receptors"</i>	254
References	257
14. MEMBRANES AND CELL DIVISION	261
14.1. Mitosis	262
14.2. Cytokinesis types in plants	264
14.3. Phragmoplast and cell plate	265
14.3.1. <i>Morphological aspects</i>	265
14.3.2. <i>Inhibition of cytokinesis</i>	269

14.4. The plane of cell division and its control	269
References	271

PART THREE: Biogenesis and Turnover of Plant Cell Membranes

15. GENERAL PRINCIPLES	275
15.1. Membrane synthesis	276
15.1.1. Proteins	276
15.1.2. Lipids	277
15.2. Membrane turnover	278
15.2.1. Proteins	278
15.2.2. Lipids	279
15.3. Vesicular membrane movements	279
15.3.1. Exocytosis and endocytosis	279
15.3.2. Membrane flow and differentiation versus vesicle shuttles	280
15.4. Nonvesicular membrane movements	282
References	282
16. FOR COMPARISON: THE CASE IN ANIMAL CELLS	285
16.1. Membranes involved in movement toward the PM	286
16.1.1. Example: Synthesis and transport of PM glycoproteins	286
16.1.2. Example: Regulated secretion	287
16.2. Membranes involved in movement from the PM	288
16.2.1. Example: Secretion-coupled endocytosis	288
16.2.2. Example: Receptor-mediated endocytosis	289
References	290
17. THE CASE IN PLANT CELLS	293
17.1. Secretion kinetics and membrane turnover	294
17.1.1. Normal cells	294
17.1.2. Inhibitor experiments	298

14.4. The plane of cell division and its control	269
References	271

PART THREE: Biogenesis and Turnover of Plant Cell Membranes

15. GENERAL PRINCIPLES	275
15.1. Membrane synthesis	276
15.1.1. Proteins	276
15.1.2. Lipids	277
15.2. Membrane turnover	278
15.2.1. Proteins	278
15.2.2. Lipids	279
15.3. Vesicular membrane movements	279
15.3.1. Exocytosis and endocytosis	279
15.3.2. Membrane flow and differentiation versus vesicle shuttles	280
15.4. Nonvesicular membrane movements	282
References	282
16. FOR COMPARISON: THE CASE IN ANIMAL CELLS	285
16.1. Membranes involved in movement toward the PM	286
16.1.1. Example: Synthesis and transport of PM glycoproteins	286
16.1.2. Example: Regulated secretion	287
16.2. Membranes involved in movement from the PM	288
16.2.1. Example: Secretion-coupled endocytosis	288
16.2.2. Example: Receptor-mediated endocytosis	289
References	290
17. THE CASE IN PLANT CELLS	293
17.1. Secretion kinetics and membrane turnover	294
17.1.1. Normal cells	294
17.1.2. Inhibitor experiments	298

CONTENTS	xix
17.2. Membrane flow, equilibrium and recycling	300
17.3. Membrane biogenesis in germinating seed tissues	301
References	303
18. A SPECIAL CASE: WOUNDED TISSUES	307
18.1. The cytological response	308
18.2. The biochemical response	311
18.2.1. <i>Initial events: The wounding itself</i>	311
18.2.2. <i>Subsequent events: The "aging"</i>	315
References	318
