Preface	xi
1 Historical Background, Current Relevance and Perspectives	1
References	5
2 Some General Principles	6
2.1 Occurrence and Availability of Inorganic Elements in Organisms	6
2.2 Biological Functions of Inorganic Elements	15
2.3 Biological Ligands for Metal Ions	16
2.3.1 Coordination by Proteins—Comments on Enzymatic Catalysis	17
2.3.2 Tetrapyrrole Ligands and Other Macrocycles	23
2.3.3 Nucleobases, Nucleotides and Nucleic Acids (RNA, DNA) as Ligands. . . .	33
2.4 Relevance of Model Compounds	35
References	36
3 Cobalamins Including Vitamin and Coenzyme B₁₂	39
3.1 History and Structural Characterization	39
3.2 Reactions of the Alkylcobalamins	41
3.2.1 One-Electron Reduction and Oxidation	41
3.2.2 Co—C Bond Cleavage	42
3.2.3 Mutase Activity of Coenzyme B ₁₂	46
3.2.4 Alkylation Reactions of Methylcobalamin	52
3.3 Model Systems and the Role of the Apoenzyme	53
References	54
4 Metals at the Center of Photosynthesis: Magnesium and Manganese	56
4.1 Volume and Total Efficiency of Photosynthesis	56
4.2 Primary Processes in Photosynthesis	57
4.2.1 Light Absorption (Energy Acquisition)	58
4.2.2 Exciton Transport (Directed Energy Transfer)	59
4.2.3 Charge Separation and Electron Transport	63
4.3 Manganese-Catalyzed Oxidation of Water to O ₂	68
References	79
5 The Dioxygen Molecule, O₂: Uptake, Transport, and Storage of an Inorganic Natural Product	82
5.1 Molecular and Chemical Properties of Dioxygen, O ₂	82
5.2 Oxygen Transport and Storage through Hemoglobin and Myoglobin	88

5.3	Alternative Oxygen Transport in Some Lower Animals: Hemerythrin and Hemocyanin	100
5.3.1	Magnetism	100
5.3.2	Light Absorption	101
5.3.3	Vibrational Spectroscopy	101
5.3.4	Mössbauer Spectroscopy	102
5.3.5	Structure	103
	References	105
6	Catalysis Through Hemoproteins: Electron Transfer, Oxygen Activation and Metabolism of Inorganic Intermediates	107
6.1	Cytochromes	109
6.2	Cytochrome P-450: Oxygen Transfer from O ₂ to Nonactivated Substrates.	112
6.3	Peroxidases: Detoxification and Utilization of Doubly Reduced Dioxygen.	119
6.4	Controlling the Reaction Mechanism of the Oxyheme Group—Generation and Function of Organic Free Radicals	120
6.5	Hemoproteins in the Catalytic Transformation of Partially Reduced Nitrogen and Sulfur Compounds.	122
	References	125
7	Iron–Sulfur and Other Nonheme Iron Proteins	128
7.1	Biological Relevance of the Element Combination Iron/Sulfur	128
7.2	Rubredoxins.	133
7.3	[2Fe–2S] Centers.	133
7.4	Polynuclear Fe/S Clusters: Relevance of the Protein Environment and Catalytic Activity	134
7.5	Model Systems for Iron–Sulfur Proteins	139
7.6	Iron-Containing Enzymes without Porphyrin or Sulfide Ligands	141
7.6.1	Iron-Containing Ribonucleotide Reductase (RR).	141
7.6.2	Soluble Methane Monooxygenase (MMO).	143
7.6.3	Purple Acid Phosphatases (Fe/Fe and Fe/Zn).	144
7.6.4	Mononuclear Nonheme Iron Enzymes	144
	References	146
8	Uptake, Transport and Storage of an Essential Element as Exemplified by Iron.	150
8.1	The Problem of Iron Mobilization—Oxidation States, Solubility and Medical Relevance.	150
8.2	Siderophores: Iron Uptake by Microorganisms.	152
8.3	Phytosiderophores: Iron Uptake by Plants	160
8.4	Transport and Storage of Iron.	161
8.4.1	Transferrin.	162
8.4.2	Ferritin	165
8.4.3	Hemosiderin	169
	References	170
9	Nickel-Containing Enzymes: The Remarkable Career of a Long Overlooked Biometal	172
9.1	Overview	172
9.2	Urease	173

9.3	Hydrogenases	174
9.4	CO Dehydrogenase = CO Oxidoreductase = Acetyl-CoA Synthase	176
9.5	Methyl-Coenzyme M Reductase	180
9.6	Model Compounds	183
	References	184
10	Copper-Containing Proteins: An Alternative to Biological Iron	187
10.1	Type 1: 'Blue' Copper Centers	192
10.2	Type 2 and Type 3 Copper Centers in O ₂ -Activating Proteins: Oxygen Transport and Oxygenation	197
10.3	Copper Proteins as Oxidases/Reductases	202
10.4	Cytochrome <i>c</i> Oxidase	206
10.5	Cu,Zn and Other Superoxide Dismutases: Substrate-Specific Antioxidants	209
	References	212
11	Biological Functions of the 'Early' Transition Metals: Molybdenum, Tungsten, Vanadium and Chromium	215
11.1	Oxygen Transfer through Tungsten- and Molybdenum-Containing Enzymes	215
11.1.1	Overview	215
11.1.2	Enzymes Containing the Molybdopterin Cofactor	217
11.2	Metalloenzymes in the Biological Nitrogen Cycle: Molybdenum-Dependent Nitrogen Fixation	224
11.3	Alternative Nitrogenases	232
11.4	Biological Vanadium Outside Nitrogenases	235
11.5	Chromium(III) in the Metabolism?	238
	References	238
12	Zinc: Structural and Gene-Regulatory Functions and the Enzymatic Catalysis of Hydrolysis or Condensation Reactions	242
12.1	Overview	243
12.2	Carboanhydrase (CA)	246
12.3	Carboxypeptidase A (CPA) and Other Hydrolases	251
12.4	Catalysis of Condensation Reactions by Zinc-Containing Enzymes	256
12.5	Alcohol Dehydrogenase (ADH) and Related Enzymes	257
12.6	The 'Zinc Finger' and Other Gene Regulatory Zinc Proteins	260
12.7	Insulin, hGH, Metallothionein and DNA Repair Systems as Zinc-Containing Proteins	262
	References	264
13	Unequally Distributed Electrolytes: Function and Transport of Alkali and Alkaline Earth Metal Cations	267
13.1	Characterization of K ⁺ , Na ⁺ , Ca ²⁺ and Mg ²⁺	267
13.2	Complexes of Alkali and Alkaline Earth Metal Ions with Macrocycles	273
13.3	Ion Channels	277
13.4	Ion Pumps	281
	References	284

14	Catalysis and Regulation of Bioenergetic Processes by the Alkaline Earth Metal Ions	
	Mg²⁺ and Ca²⁺	286
14.1	Magnesium: Catalysis of Phosphate Transfer by Divalent Ions.	286
14.2	The Ubiquitous Regulatory Role of Ca ²⁺	293
	References	300
15	Biom mineralization: The Controlled Assembly of 'Advanced Materials' in Biology	303
15.1	Overview	303
15.2	Nucleation and Crystal Growth.	308
15.3	Examples of Biominerals	309
15.3.1	Calcium Phosphate in the Bones of Vertebrates	309
15.3.2	Calcium Carbonate	312
15.3.3	Amorphous Silica	313
15.3.4	Iron Biominerals	314
15.3.5	Strontium and Barium Sulfates	315
	References	316
16	Biological Functions of the Nonmetallic Inorganic Elements.	318
16.1	Overview	318
16.2	Boron.	318
16.3	Silicon	318
16.4	Arsenic and PH ₃	319
16.5	Bromine	320
16.6	Fluorine	320
16.7	Iodine.	321
16.8	Selenium.	323
	References	328
17	The Bioinorganic Chemistry of the Quintessentially Toxic Metals	330
17.1	Overview	330
17.2	Lead.	332
17.3	Cadmium	335
17.4	Thallium.	338
17.5	Mercury	338
17.6	Aluminum	343
17.7	Beryllium	346
17.8	Chromium as Chromate(VI).	346
	References	348
18	Biochemical Behavior of Inorganic Radionuclides: Radiation Risks and Medical Benefits	351
18.1	Overview	351
18.2	Natural and Man-Made Radioisotopes Outside Medical Applications	352
18.3	Bioinorganic Chemistry of Radiopharmaceuticals	356
18.3.1	Overview	356
18.3.2	Technetium — a 'Man-Made Bioinorganic Element'	358
	References	362

Wiley & Sons for their patience and support. Very special thanks are due to Mrs Angela Winkelmann for her continued involvement in the processing of the manuscript.

Stuttgart, December 1993
