INTRODUCTION TO MACROMOLECULAR CHEMISTRY 2nd Edition

Hans Batzer and Friedrich Lohse, *Ciba-Geigy Limited, Basle, Switzerland*

This short textbook presents an easily readable introduction to the field of macromolecular chemistry for students; it also provides the practitioner and technologist occupied in a specific field of macromolecular chemistry with a general review of the subject. The technology of these compounds has been treated in a special chapter, and specifically from the point of view of the dependence of properties on the constitution of macromolecules.

This new edition covers synthesis and isolation of macromolecular compounds, both natural and synthetic, their characterization and identification. Particular attention is paid to the relationship between structure and physical properties.

Contents: Foreword to the First Edition: Preface to the Second Edition: Preface to the First Edition: General Introduction: Synthesis and isolation of macromolecular compounds; Synthesis of macromolecular compounds; Macromolecular natural products; Reactions of Macromolecular compounds; Characterization and identification of macromolecular compounds; Characterization of macromolecules in solution; Characterization of macromolecular compounds in the solid state: Physical properties and technical processing of macromolecular substances; General dependence of properties; Technical methods of processing macromolecular substances; Testing of the physical and technical properties of macromolecular compounds: Appendix: Bibliography: Index.
