

Subcellular Biochemistry

Edited by Donald B. Roodyn
University College London, England

Previously published as a quarterly journal, this continuing series has been expanded into an annual volume that brings together some of the most vital work in the rapidly growing field of subcellular biochemistry. This major publication — in which conventional biochemistry is presented side by side with cell biology, genetics, and evolutionary biology is designed to stimulate progress toward an integrated view of the cell.

Featuring contributions by experts of international acclaim, *Subcellular Biochemistry* is widely respected for its high quality and informative articles. Each volume also features a book review section surveying recent texts in cell biology and biochemistry.

Volume 5: 410 pp., illus., 1978, ISBN 0-306-33405-4

Volume 6: 544 pp., illus., 1979, ISBN 0-306-40113-4
