BIOLOGICAL MACROMOLECULES AND ASSEMBLIES

Volume 2: Nucleic Acids and Interactive Proteins

Edited by Frances Jurnak and Alexander McPherson

This second volume provides a review of recent research results defining the atomic resolution structures of classic A and B forms of DNA and the new Z form. It also describes the structures of three proteins that recognize and bind to sequence, defined sites on native double-stranded DNA, considers two proteins that bind nonsequence specifically to single-stranded DNA, and treats the proteins that bind exclusively with RNA.

400 pp. (0-471-87076-5) 1984

MOLECULAR BIOLOGY OF POLYOMAVIRUSES AND HERPESVIRUSES

Bernard V. Perbal, Hawley K. Linke and George C. Fareed

Reviews recent molecular, biological and genetic engineering advances with two of the most important DNA virus families. Deals with the processes of gene organization and expression for these viruses and the malignant cellular transformation caused by them.

247 pp. (0-471-05058-X) 1983

TRANSAMINASES

Edited by David E. Metzler and Philipp Christen

This unique collection of papers provides up-to-date coverage of the properties and functions of transaminases (aminotransferases). Leading experts analyze current data on the three-dimensional structures of the aspartate aminotransferases as well as reaction mechanisms, suicide inactivators, metabolic functions, cell-biological features, and clinical significance. Includes a detailed description of the chemical properties and metabolism of vitamin B-6 and its coenzymes.

700 pp. (0-471-08501-4) 1984
