

Other Special Publications of The British Ecological Society

No. 3 / Ecological Aspects of Radionuclide Release

Edited by P. J. Coughtrey

1983. 294 pages, 104 illustrations.

This publication contains a number of papers presented at a meeting of the Industrial Ecology Group of the British Ecological Society in 1982. The aim of the meeting was the discussion of those aspects of radionuclide release to the environment which impinge on, interact with, or are related to ecological systems. The papers represent primarily UK experience, but a number illustrate the approach adopted within other European countries. The volume as a whole reflects the radical changes in emphasis currently taking place in environmental studies of radionuclides, and is of interest to a wide audience.

No. 2 / Tropical Rain Forest: Ecology and Management

Edited by S. L. Sutton, T. C. Whitmore and A. C. Chadwick

1983. 512 pages, 90 illustrations.

With increasing concern in the world about the destruction of tropical forests, this volume is aimed at those interested in discovering the current state of tropical forest science. It contains papers presented by the Tropical Group of the British Ecological Society at Leeds University in 1982, where the ecological subjects discussed were among those presently attracting the attention of tropical rain forest biologists.

No. 1 / The Plant Community as a Working Mechanism

Edited by E. J. Newman

1982. 128 pages, 40 illustrations.

This symposium in honour of A. S. Watt is concerned with the processes and mechanisms which control the structure and composition of plant communities. Each of the distinguished contributors considers in depth a different aspect, producing new ideas which illuminate the central theme.
