

Another volume in the Horizons in Biochemistry and Biophysics Series:

VOLUME 6—HORMONE RECEPTORS

Edited by L. D. Kohn, Laboratory of Biochemical Pharmacology, National Institute of Arthritis, Metabolism and Digestive Diseases, National Institutes of Health, Bethesda, Maryland

The theme of this volume is hormone receptors. In keeping with the aims of the previous volumes in the series it provides an overview of the significant problems facing researchers in this area, as applied to individual receptors, and some of the possible approaches to their solution.

This book will be of interest to students and researchers in biochemistry, biophysics, biology and pharmacology.

Contents

Receptor structure and function: an exploratory approach using the thyrotropin receptor as a vehicle, *L. D. Kohn and S. Shifrin*; Steady-state relations between hormone binding and elicited response: quantitative mechanistic models, *A. P. Minton*; Perspectives for monoclonal antibodies in receptor research, *E. Yavin*; Membrane lipids and modulation of hormone receptor expression, *S. M. Aloj*; Biosynthesis and assembly of membrane proteins, *S. Bonatti*; The purification and characterization of interferons, *K. C. Zoon and M. E. Smith*; Carbohydrates and receptor recognition, *O. Gabriel*; Receptor-mediated alterations in membrane potential and internal pH as intracellular signals, *E. F. Gröllman*; Interactions between the cAMP and calcium messenger systems, *H. Rasmussen*; Receptor mediated modulation of plasma membrane calcium transport, *D. L. Gill*; Involvement of phosphatidylinositol breakdown in elevation of cytosol Ca^{2+} by hormones and relationship to prostaglandin formation, *J. N. Fain*; Receptor modulation of calcium and cyclic AMP: differences in coupling to specific hormone-receptor complexes in cells responsive to several hormones, *J. D. Gardner and R. T. Jensen*; GTP-dependent stimulation and inhibition of adenylate cyclase, *D. M. F. Cooper and C. Londos*; Synthetic inducers of interferons, *P. F. Torrence*; The mechanism of action of interferon, *J. A. Lewis*; Index
