

"There is a high level of accuracy for individual reports in addition to the extent of the overall survey; it seems to indeed come as close to a complete compilation as is humanly possible. I have not met Dr. McCarthy, but after reviewing innumerable cases, I have a vision of a monkish figure variously cloistered in the ancient stacks of academic libraries and hunched before a computer terminal, compiling case after case with detail and accuracy that would guarantee his deliverance to a state of (academic) grace! I am sure my vision is a bit exaggerated, but it is an amazing compilation."

—William S. Moore, Professor of Biology, Wayne State University
