

Advances in Virus Research Volume 65

Edited by

Karl Maramorosch and Aaron J. Shatkin

Cover illustration: The front cover image shows the routes of transmission of influenza A viruses from their reservoir in wild aquatic birds to humans. See review by Noah and Krug in this volume.

Contents

Kakugo Virus from Brains of Aggressive Worker Honeybees

Tomoko Fujiyuki, Hideaki Takeuchi, Masato Ono, Seii Ohka, Tetsuhiko Sasaki, Akio Nomoto, and Takeo Kubo

Host Factors and RNA Virus Amplification: RNA Viruses Redirect Host Factors to Better Amplify Their Genome

Anna M. Boguszewska-Chachulska and Anne-Lise Haenni

Tomato Spotted Wilt Virus Particle Assembly and the Prospects of Fluorescence Microscopy to Study Protein-Protein Interactions Involved

Marjolein Snippe, Rob Goldbach and Richard Kormelink

Influenza Virus Virulence and Its Molecular Determinants

Diana L. Noah and Robert M. Krug

Alteration and Analyses of Viral Entry with Library-Derived Peptides

Keith Bupp and Monica J. Roth

A Decade of Advances in Iridovirus Research

Trevor Williams, Valérie Barbosa-Solomieu and V. Gregory Chinchar
