

Critical acclaim for *Creation: Life and How to Make It*

"If you've heard about A-life but aren't quite sure what it is or where it's going, Grand's book is an excellent place to enter one of the more exciting areas of twenty-first-century science."

—**John L. Casti**, *Nature*

"Very occasionally somebody from outside academia comes along and shows us academics how to do something we've been working on for years. Steve Grand showed us how to build a universe of evolving creatures, without the prevailing academic biases. This delightful book is a fresh and inspiring account of how to succeed in creating artificial life."

—**Rodney Brooks**, Director, Artificial Intelligence Laboratory, MIT

"Steve Grand is the creator of what I think is the nearest approach to artificial life so far, and his first book, *Creation*, is as interesting as you would expect. But he illuminates more than just the properties of life; his originality extends to matter itself and the very nature of reality."

—**Richard Dawkins**, *The Guardian*

Critical acclaim for Steve Grand's work

"An international experiment in artificial life that has amateurs and scientists alike enthralled."

—*Wall Street Journal*

"A giant leap forward into a new and unknown world . . . awe-inspiring."

—**Douglas Adams**, author of *The Hitchhiker's Guide to the Galaxy*
