

NEW MEDIA/TECHNOLOGY

"Eugene Thacker has written an indispensable overview of current trends and developments in the technosphere of the life sciences, changes that are having a tremendous, though often latent, impact on everyday life on a global scale. What separates Thacker's work from other similar attempts is his brilliant critical framing of the issues, as well as his unrelenting grounding of life science and its attendant technologies within the larger field of political economy. This volume is a powerful interdisciplinary work, in the most authentic sense of the term."

"An analytical and theoretical tour de force. *The Global Genome* is that rare thing: a book that combines a confident knowledge of biotechnology with a sharp eye for theory, with pyrotechnic results. Thacker maps a biopolitical economy of recombinant capital, biomaterial labor, technologies, biowar, and colonialism, a construct that wreaks havoc on our understanding of what a body is, what it can do, and what it can be made to do in the age of biotechnology. An eye-opener for the non-expert, and an essential contribution for researchers and students."
