

Current Topics in **Developmental Biology** *Volume 67*

Edited by **Gerald P. Schatten**

Director, Pittsburgh Developmental Center, Professor and Vice Chair of Obstetrics, Gynecology, and Reproductive Science and Cell Biology and Physiology, University of Pittsburgh School of Medicine, Pennsylvania, U.S.A.

In keeping with the tradition of excellence of past volumes of the *Current Topics in Developmental Biology* series, this volume provides a comprehensive survey of major issues at the forefront of modern developmental biology and regenerative medicine. Astonishing discoveries are presented in thoughtful and forward-looking articles.

- Deer antlers as a model of mammalian regeneration
- The molecular and genetic control of leaf senescence and longevity in *arabidopsis*
- *Cripto-1*: An oncofetal gene with many faces
- Programmed cell death in plant embryogenesis
- Physiological roles of aquaporins in the choroid plexus
- Control of food-intake through regulation of *camp*
- Factors affecting male song evolution in *drosophila montana*
- Prostanoids and phosphodiesterase inhibitors in experimental pulmonary hypertension
- 14-3-3 protein signaling in development and growth factor responses
- Skeletal stem cells in regenerative medicine

Clinical and fundamental researchers, as well as students and other professionals, will find this series an indispensable guide to current topics in cellular and molecular approaches to developmental biology and clinical problems of aberrant development.
