

TOPOPHILIA

A Study Of Environmental Perception, Attitudes, And Values • Yi-Fu Tuan

"My overall impression of the work is that it is a classic Yi-Fu Tuan and will be the single richest source of his thinking in the field. I cannot imagine it being competitive in a market as it will be a single volume which has no competitors. . . . In short, you have a fine manuscript and I am certain that the published volume will attract great attention within the discipline."

"It is indeed a perceptive world-wide view of topophilic expression. In view of the content, the book is a unique product coming from a geographer and should likewise be a unique work in geography. . . ."

"Sums up the story beautifully. Good strong threads of continuity reach back into the body of the book to tie it up in one neat package (Chapter 15). Well done."

These are reactions gleaned from enthusiastic prepublication reviews of *Topophilia: A Study of Environmental Perception, Attitudes, and Values* by Yi-Fu Tuan. It is a book which deals eloquently with such urgent questions as: What are our views on the physical environment, natural and man-made? How do we perceive, structure, and evaluate it? What have been, and what are, our environmental ideals? How do economy, life style, and the physical setting itself affect environmental attitudes and values? What are the links between environment and world view?
