

Ecology Concepts and Applications 2nd ed.

- Unique art program that uses captions within the illustration to explain the process. The key information is integral to the concept, rather than contained in a standard figure legend.
- Chapter 18 on landscape Ecology not available in any other ecology textbook.
- Numerous Learning aids such as chapter concepts, evidence (research results) sections, applications and tools sections, chapter summary, review questions, list of readings, references.
- True "Concepts" orientation with each chapter being built around one or two key concepts.
- Includes many examples drawn from the natural history of organisms.
- Includes classical studies along with contemporary examples to show the scientific method is valid and that research is still incomplete.
