

Advances in Virus Research—Volume 74

Edited by

Karl Maramorosch, Aaron J. Shatkin
and Frederick A. Murphy

Cover illustration: From Andrew D. Davidson: Structure of the NS5 MTase domain of dengue 2 virus. See *New Insights into Flavivirus Nonstructural Protein 5*. Pages 41–102.

A schematic representation of the X-ray structure of the dengue 2 virus (DENV-2) MTase in complex with GTP and AdoMet (PDB code: 2P1D; Egloff et al., 2007) is shown with the N-terminal, core MTase, and C-terminal subdomains colored in red, cyan, and yellow, respectively. The bound AdoHcy and GTP molecules are shown in stick representation and colored purple. Secondary structural elements are labeled according to Egloff et al. (2002). The schematic was produced using PYMOL (DeLano, 2002).

Contents

Regulation of HIV-1 Alternative RNA Splicing and Its Role in Virus Replication
C. Martin Stoltzfus

New Insights into Flavivirus Nonstructural Protein 5
Andrew D. Davidson

Replication of the Hepatitis Delta Virus RNA Genome
John M. Taylor

Recent Epidemiology of Tick-Borne Encephalitis: An Effect of Climate Change?
E.I. Korenberg
