

Here, an extremely experienced team of authors from five different continents provides a timely review of progress in the use and exploitation of soil bacteria to improve crop and plant growth. They present novel ideas on how to grow better, more successful crops, in an environmentally sound way, making this invaluable reading for those working in the biotechnological and agricultural industries.

Iqbal Ahmad is a Reader of Agricultural Microbiology at Aligarh Muslim University (AMU), Aligarh, India. He gained his M.Phil. and Ph.D. from the AMU, carrying out his major doctoral research at the Central Drug Research Institute, Lucknow, India. He worked as a research scientist at the Himalaya Drug Company before moving to the faculty of Agricultural Sciences, AMU. His current research areas include microbial ecology, plant-microbe interactions and plant growth promoting rhizobacteria. Besides this his group is actively engaged in discovering novel bioactive compounds from medicinal plants and microbial sources to combat resistant bacteria. Iqbal Ahmad has published about 50 research papers and edited two books.

John Pichtel is a Professor of Natural Resources and Environmental Management at Ball State University in Muncie, Indiana, USA, where he has been on the faculty since 1987. He received the Ph.D. in Environmental Science at Ohio State University. His primary research and professional activities have been in management of hazardous and municipal wastes, remediation of contaminated sites, reclamation of mined lands, and environmental chemistry. John Pichtel holds memberships in the Institute of Hazardous Materials Managers, Sigma Xi Scientific Society, the American Society of Agronomy, and the Indiana Academy of Science. He has written two books and has been the author of approximately 30 research articles.

Shamsul Hayat is a Reader in the Department of Botany, Aligarh Muslim University (AMU), Aligarh, India. He received his Ph.D. degree in Botany from the AMU. Before joining the Department as faculty, he has worked as Research Associate and Young Scientist in the Department of Botany, AMU. His major areas of research are phytohormones and heavy metal stress in plants and biofertilizers. Among other organizations Shamsul Hayat is Associate of the National Academy of Agricultural Sciences, New Delhi, India. He has published more than 60 research papers and edited four books.
